

PLANNING COMMISSION WORK SESSION AGENDA Monday, August 22, 2022 - 6:00 PM City Hall, Council Chambers, 169 SW Coast Hwy, Newport, OR 97365

All public meetings of the City of Newport will be held in the City Council Chambers of the Newport City Hall, 169 SW Coast Highway, Newport. The meeting location is accessible to persons with disabilities. A request for an interpreter, or for other accommodations, should be made at least 48 hours in advance of the meeting to Peggy Hawker, City Recorder at 541.574.0613, or p.hawker@newportoregon.gov.

All meetings are live-streamed at https://newportoregon.gov, and broadcast on Charter Channel 190. Anyone wishing to provide written public comment should send the comment to publiccomment@newportoregon.gov. Public comment must be received four hours prior to a scheduled meeting. For example, if a meeting is to be held at 3:00 P.M., the deadline to submit written comment is 11:00 A.M. If a meeting is scheduled to occur before noon, the written submitted P.M. comment must be bv 5:00 the previous dav. To provide virtual public comment during a city meeting, a request must be made to the meeting staff at least 24 hours prior to the start of the meeting. This provision applies only to public comment and presenters outside the area and/or unable to physically attend an in person meeting.

The agenda may be amended during the meeting to add or delete items, change the order of agenda items, or discuss any other business deemed necessary at the time of the meeting.

1. CALL TO ORDER

Jim Patrick, Bill Branigan, Bob Berman, Jim Hanselman, Gary East, Braulio Escobar, John Updike, Dustin Capri, and Greg Sutton.

2. UNFINISHED BUSINESS

- 2.A Revised Camping Ordinance (carried over from August 8, 2022 work session). Memorandum Revised Draft Camping Ordinance
- 2.B Draft Housing Study Residential Land Needs Assessment. Memorandum Draft PowerPoint for Housing Committee Meeting No. 4
- 2.C Review Final Draft of Yaquina Head Traffic Study. Memorandum Yaquina Head Traffic Study- Final Draft, dated 6/30/22 Appendix A: Public Involvement Appendix B: Existing and Projected Conditions Memo Appendix C: Alternatives Analysis Appendix D: Cost Estimates
- 3. NEW BUSINESS
- 3.A Citizen Advisory Board Position. Gail (Annie) McGreenery Email 8-16-2022
- 4. ADJOURNMENT

Memorandum

To: Planning Commission/Commission Advisory Committee

From: Derrick I. Tokos, AICP, Community Development Director

Date: August 18, 2022

Re: Revised Camping Ordinance (carried over from August 8, 2022 work session)

Attached is a revised draft of the new camping ordinance, which should be easier for you to work through then the draft that was presented at your July 11, 2022 work session. There are still a few edits that need to be made, including cross-references to the City's zoning ordinance (NMC Chapter 14). We might also want to address the zoning pieces separately so that the core elements of the camping ordinance can be adopted soon.

Please take a moment to look over the document and let me know if you have any comments.

Attachments Revised Draft Camping Ordinance

REVISED DRAFT OF CAMPING ORDINANCE

9.50.000 Title and Purpose

The title of this section shall be known as the "Newport Camping Regulations." The purpose of this section is to protect the safety of citizens and regulate the use of publicly-owned property by establishing time, manner, and place guidelines.

9.50.010 Definitions

The following definitions apply in this chapter.

- A. "Camp" or "camping" means to pitch, erect, create, use, or occupy camp facilities for the purposes of habitation, as evidenced by the use of camp paraphernalia.
- B. "Camp facilities" include, but are not limited to, tents, huts, temporary shelters, or vehicles.
- C. "Camp paraphernalia" includes, but is not limited to, tarpaulins, cots, beds, sleeping bags, blankets, mattresses, hammocks, or outdoor cooking devices or utensils and similar equipment.
- D. "Campsite" means any place where one or more persons have established temporary sleeping accommodations by use of camp facilities and/or camp paraphernalia. A campsite set up for a minimum of 48 hours shall be considered an established campsite.
- E. "City manager" means the Newport city manager, or the city manager's designee.
- F. "Dwelling" A single unit providing complete independent living facilities for one or more persons, including permanent provisions for living, sleeping, eating, cooking and sanitation.
- G. "Motor vehicle" has the meaning given that term in ORS 801.360.
- H. "Park areas" has the meaning set forth NMC 9.75.
- I. "Parking lot" means a developed location that is designated for parking motor vehicles, whether developed with asphalt, concrete, gravel, or other material.
- J. "Prohibited campsite" means any campsite Not authorized under the Newport Municipal Code (NMC).
- K. "Public owned property" means any real property or structures owned, leased, or managed by the city or other government agency including public rights-of-way.
- L. "Public rights of way" means all property dedicated to the public for transportation purposes and administered by the city, including streets, roads, bridges, alleys, sidewalks, trails, paths, and all other public ways and areas managed by the city. "Right-of-way" also includes public utility easements to the extent that the easement

allows use by the permittee planning to use or using the public utility easement. "Right-of-way" includes the subsurface under and airspace over these areas. "Rightof-way" does not include the airwaves for purposes of CMRS, broadcast television, DBS and other wireless providers, or easements or other property interests owned by a single utility or entity.

- M. "Recreational fire" means a fire for the cooking of food, warmth, fellowship or ceremonialpurposes.
- N. "Recreational vehicle" has the meaning given that term in ORS 174.101
- O. "Solid waste" means any garbage, trash, debris, yard waste, food waste, or other discarded materials.
- P. "Solid waste disposal services" means contracted solid waste collection service for a campsite with the city's exclusive franchisee for the collection of solid waste.
- Q. "Store" or "storage" means to put aside or accumulate for use when needed, to put forsafekeeping, to place or leave in a location.
- R. "Street" means any highway, lane, road, street, right-of-way, alley, and every way or placein the city of Newport that is publicly-owned or maintained for public vehicular travel.

9.50.015 Permitted Camping

- A. The prohibitions in Section 9,50.020 shall not apply to the following circumstances:
 - The property involved is appropriately zoned andhas all necessary approvals for the proposed camping use, in a vehicle or otherwise, as provided in Title XIV of the Newport Municipal Code; or
 - 2. Camping is occurring in accordance with a duly executed emergency declaration made pursuant to Section 1.70.030; or
 - 3. A special events permit has been issued in accordance with Chapter 9.80 authorizing camping; or
 - 4. The owner of a commercial or industrial property, a public entity, or a religious institution/place of worship may offer overnight vehicle camping space to homeless persons living in vehicles, provided:
 - a. such accommodations are made free of charge; and
 - b. occupancy is limited to three or fewer vehiclesat the same time; and
 - c. vehicles are located within an on-premise parking lot, and are spaced at least 10 feet apart; and
 - d. all items and materials are stored in vehicles orin a separate storage area

that is screened from view from adjacent properties and publicrights-of-way; and

- e. campers are provided access to sanitary facilities, including a toilet, hand washing and trash disposal facilities, with such facilities being at least 20-feet from the property line of residential use if not fully contained within abuilding; and an inspection is performed by the City to confirm that sanitary facilities are in place, required setbacks are met, and any storage areas are screened, before overnight vehicle camping is commenced.
- B. With written authorization of the private property owner of the property:
 - 1. Up to three total motor vehicles or tents, in any combination, may be used for camping inany parking lot on the following types of property:
 - a. Real property developed and owned by a religious institution, place of worship, regardless of the zoning designation of the property.
 - Real property developed with one or more buildings occupied and used by any organization or business primarily for nonprofit, commercial or industrial purposes;
 - c. Vacant or unoccupied commercial or industrial real property, after the property ownerhas registered the temporary camping location with the city. The city may require the site to be part of a supervised program operated by the city or its agent.
- C. A property owner who authorizes any person to camp on a property pursuant to subsection"A" of this section must:
 - 1. Provide or make available sanitary facilities;
 - 2. Provide garbage disposal services so that there is no accumulation of solid waste on thesite;
 - 3. Provide a storage area for campers to store any personal items so the items are not visible from any public street;
 - A. Not require or accept the payment of any monetary charge nor performance of any valuable service in exchange for providing the authorization to camp on the property; provided, however, that nothing in this section will prohibit the property owner from requiring campers to perform services necessary to maintain safe, sanitary, and habitableconditions at the campsite.
- D. A property owner who permits camping pursuant to subsection "A" of this section may revoke that permission at any time and for any reason.
- E. Notwithstanding any other provision of this chapter, the city manager or their designee may:

- Revoke the right of any person(s) to authorize camping on property described in subsection "A" of this section upon finding that the person(s) has violated any applicable law, ordinance, rule, guideline or agreement, or that any activity occurring on that property by a camper(s) is incompatible with the use of the property or adjacent properties.
- 2. Revoke permission for a person(s) to camping overnight on city-owned property upon finding that the person(s) has violated any applicable law, ordinance,rule, guideline or agreement, or that any activity occurring on that property by a camper(s) is incompatible with the use of the property or adjacent properties.
- F. Any person whose authorization to camp on property has been revoked pursuant to subsections "C" and "D" of this section must vacate and remove all belongings from the property within four hours of receiving such notice.
- G. All persons participating in the temporary camping program described in this section do so attheir own risk, and nothing in this code creates or establishes any duty or liability for the city or its officers, employees or agents, with respect to any loss related to bodily injury (including death) or property damage.

9.50.020 Camping Prohibited in Certain Places

Except as expressly authorized by the Newport Municipal Code, at all times it is unlawful for any persons to establish or occupy a campsite as designated by City Council Resolution.

- A. All City of Newport park areas;
 - 1. All publicly owned or maintained parking lots unless identified as "car camping lots"; and
 - 2. Rights of way in front of dwellings as defined 9.50.010(F)
 - 3. Streets that are more heavily trafficked, or that are in areas with industrial activities, camping shall be prohibited as specifically designated by City Council Resolution
 - a. SW Bay Blvd. from SW Bay St. to S. Pine St.
 - b. Bay Blvd. from S. Pine St. to SE Niemi Ct.
 - K SW Elizabeth St. from SW Government St. to W. Olive St.
 - d. SW Coast St. from SW 2nd St. to W. Olive St.
 - e. NW Coast St. from W. Olive St. to NW 11th St.
 - f. NW Spring St. from NW 8th St. to NW 12th St.
 - g. NW Oceanview Dr. from NW 12th St. to N. Coast Hwy
 - h. NW Rocky Way
 - i. NW Gilbert Way
 - j. 50 ft. adjacent to Hwy 101
 - k. 50 ft. adjacent to Hwy 20
- B. Except as expressly authorized by the Newport Municipal Code, it shall be unlawful

for anyperson to store personal property on a public right of way.

- C. Except as expressly authorized by the Newport Municipal Code or Special Event Permit, it shall be unlawful have a recreational fire on public property.
- D. A person or persons camping in a vehicle or recreational vehicle must adhere to parking regulations, NMC 6.05 6.35.
- E. Notwithstanding the provisions of this section, the City Manager or designee may temporarilyauthorize camping or storage of personal property on public property by written order that specifies the period of time and location:
 - 1. In the event of emergency circumstances;
 - 2. In conjunction with a special event permit; or
 - 3. Upon finding it to be in the public interest and consistent with Council goals and policies.
- F. The City Manager may adopt administrative rules to implement any of the provisions of this section.

9.50.030 Scheduling and Notice of Campsite Cleanup

- A. Cleanup of illegal campsites will be scheduled on anas-needed basis by the Chief of Police or designee.
- B. Permanent signs may be posted advising that camping is prohibited. Whether or not a permanent sign is posted, a specific dated and timed notice will be posted and distributed in the area of a scheduled cleanup at least 72 hours before the cleanup.
- C. Notwithstanding subsections A and B., cleanup of campsites may occur immediately and without notice if the chief of police or designee determine that either of the following conditions exist:
 - 1. An exceptional emergency such as possible site contamination by hazardous materials or where there is an immediate danger to human life or safety;

2. Illegal activity other than camping.

- D. At the time of the cleanup, written notice will beposted and distributed announcing the telephone number where information on picking up the stored property can be obtained during normal businesshours.
- E. Written notices, including permanent signs, will be inboth English and Spanish.
- F. Copies of all notices shall be provided to the State of Oregon Department of Human Services and/or to the Lincoln County Human Services Department.

- A. Personal property will be separated during cleanups from junk. Junk will be immediately discarded. Itemsof personal property will be turned over to the police department and stored. The personal property shall be stored for no less than 30 days, during which timeit will be reasonably available to persons claiming ownership of the personal property.
- B. The police department shall arrange in advance for a location to store personal property. The storage facility should be reasonably secure. The location should be reasonably accessible to the cleanup area and preferably served by public transportation.
- C. Any personal property that remains unclaimed for 30days after the cleanup may be disposed of, sold, donated, used, or transferred as abandoned personal property, but no waiting period beyond the 30 days isrequired prior to the disposal, sale, donation, use or transfer.
- D. Weapons, drug paraphernalia, and items which reasonably appear to be either stolen or evidence of a crime may be retained by the police department.

9.50.060 Violation

Violation of this chapter is civil infraction as defined in NMC 1.5.10.

9.50.070 Nonexclusive Remedy

The remedies described in this chapter shall not be the exclusive remedies of the city for violations of this section.

9.50.080 Interpretation

This section is to be interpreted to be consistent with applicable state statutes and providing the protections required by state statutes.

City of Newport

Memorandum

Date: August 18, 2022

Re: Draft Housing Study Residential Land Needs Assessment

Attached is a draft PowerPoint presentation prepared by consultant ECONorthwest that outline the City's projected housing needs over the next 20-years. It also includes a refined set of buildable lands assumptions. These materials will be reviewed by the Housing Study Advisory Committee at its August 25, 2022 meeting, and is being brought forward at this work session to keep the Commission informed on how the study is progressing. I may have some information on the housing constructability component of the work on Monday. ECONorthwest is still pulling that together, as it has been a challenge getting infrastructure cost assumptions dialed in accurately.

Please take a moment to review the presentation and I look forward to your comments or questions.

Revised Buildable Lands Inventory

ECONorthwest

ECONOMICS • FINANCE • PLANNING

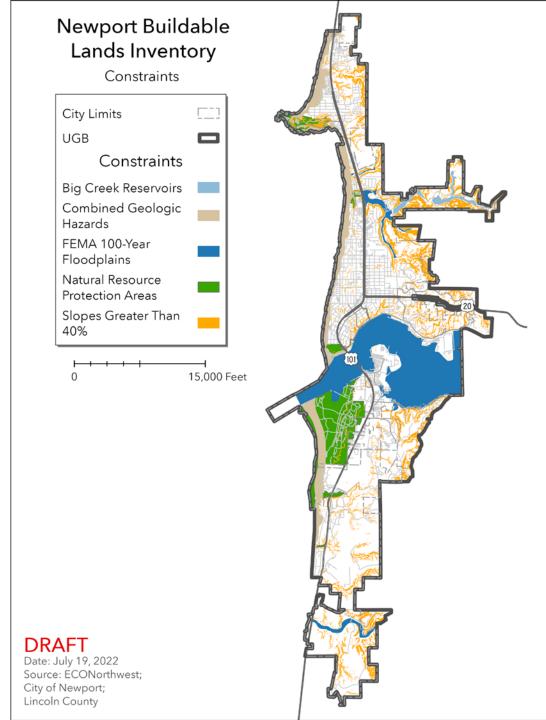

Reminder: Methodology

- 1. Gather and Assemble Data
- 2. Classify Land
- 3. Identify and Remove Constraints
- 4. Verification
- 5. Summarize Results
- 6. Constructability Analysis
 - Identify land with services where development could reasonably happen in the next 20 years
 - Pro forma analysis of financially feasible development, considering construction and infrastructure costs

Newport Comprehensive Plan Designations where housing is allowed with clear and objective standards

No change

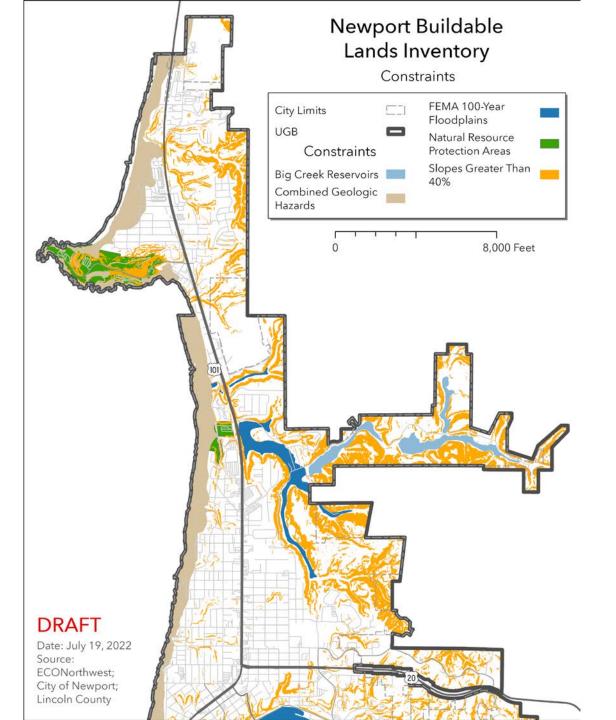

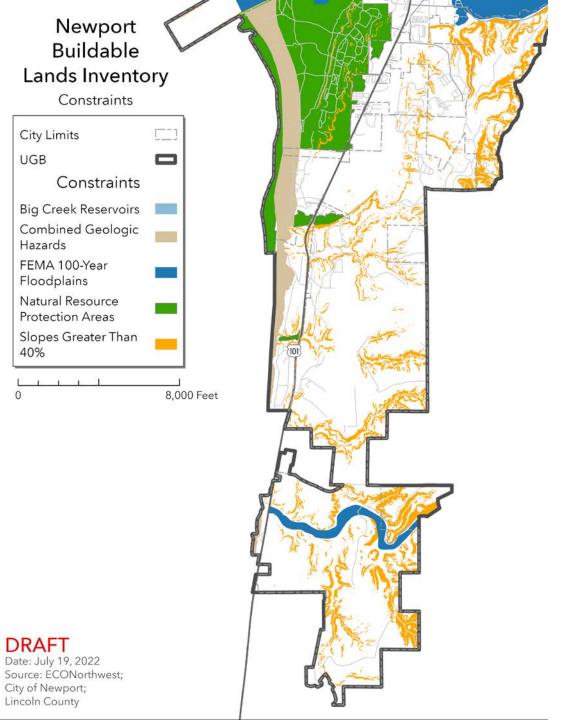

Constrained Land

- Combined Geologic Hazards
- FEMA 100-Year Floodplain
- Natural Resource Protection Areas
- Slopes greater than 40%

Removed:

- Riparian Corridors
- Tsunami Inundation zone
- Local Wetlands Inventory
- Landslide Susceptibility
- Shoreland Protection Area

City of Newport

Memorandum

To: Planning Commission/Commission Advisory Committee

From: Derrick I. Tokos, AICP, Community Development Director

Date: August 17, 2022

Re: Final Draft of the Yaquina Head Traffic Study

Enclosed is a final draft of the Yaquina Head Traffic Study. This Federal Highway Administration (FHWA) funded project evaluated the transportation facilities in, and adjacent to, the Yaquina Head Outstanding Natural Area (YHONA) to identify needed improvements. Work on the study was initiated in April of 2021 and completed at the end of June of this year. Planned transportation improvements were closely coordinated with those identified in the recently adopted Newport Transportation System Plan. This is particularly true with respect to the intersection at NW Lighthouse Drive and US 101, potential pathway connections to the south along US 101 (i.e. the Lighthouse to Lighthouse connection), and trail connections north into Agate Beach.

Please take a moment to review the Study and its appendices. The City of Newport and Bureau of Land Management (BLM) have a grant application under review with FHWA's Federal Lands Access Program (FLAP) to fund a portion of the Lighthouse to Lighthouse pathway connection and it might be advantageous to have the Yaquina Head Traffic Study officially acknowledged by the City before FHWA acts on the request. BLM and its consultants actively sought to engage stakeholders when identifying needed improvements, and that effort is documented in the Study and Appendix A.

The Yaquina Head Traffic Study must be adopted, by reference, into the Newport Comprehensive Plan in order for it to be officially acknowledged by the City. That process can be initiated by motion of the Planning Commission and there will be an opportunity for the Commission to make that motion at its regular meeting.

YAQUINA HEAD TRAFFIC STUDY OR BLM NWO 1516291(1)

ACKNOWLEDGMENTS

The following individuals provided guidance and support throughout the course of this study.

OVERSIGHT COMMITTEE

Matt Betenson – BLM, Site Manager
Jay Mueller – BLM, Chief Park Ranger
Thomas Linegar – BLM, Facilities Operations Specialist
Kath Fuller – BLM, Education Specialist/Volunteer Coordinator
Chris Robinson – BLM, Civil Engineer
Derrick Tokos – City of Newport, Community Development Director

James Feldmann – ODOT, Transportation Planner

Carrie Warren - FHWA, Project Manager

CONSULTANT TEAM

This study was conducted by consulting firm Robert Peccia and Associates (RPA). The following team members contributed to the study.

Sarah Nicolai, PE, PTP – Project Manager

Scott Randall, PE, PTOE – Senior Engineer/Principal

Kerry Pedersen, PE, RSP1 - Transportation Planner

Shane Forsythe, PE - Project Engineer

Hailee Cross, EI - Engineering Designer/Construction Technician

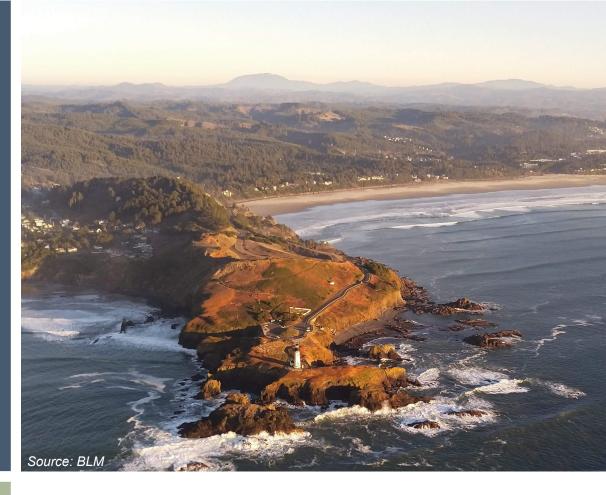

Chapter 1: Introduction

The Federal Highway Administration (FHWA) Western Federal Lands Highway Division (WFL) and the Bureau of Land Management (BLM) conducted the Yaquina Head Traffic Study to evaluate the Yaquina Head Outstanding Natural Area (ONA) and identify improvements to address site needs while considering public and stakeholder input, environmental constraints, constructibility challenges, and financial feasibility. Understanding the history and recreational opportunities at the site helps provide context for determining needs and potential improvements

1.1. STUDY AREA

Yaquina Head ONA is a 100-acre protected area managed by the BLM and officially designated by the United States Congress to provide for the conservation and development of the scenic, natural, and historic values of the area; the continued use of the area for education, scientific study, and public recreation; and protection of the wildlife habitat of the area.

Yaquina Head ONA is located on the central coast of Oregon at the north end of the City of Newport in Lincoln County. The ONA is located on a headland extending nearly one mile into the Pacific Ocean. At the point of the basalt headland is the Yaquina Head Lighthouse, Oregon's tallest lighthouse.

The ONA is accessible via Lighthouse Drive which is a one-mile-long, two-lane road that begins at the intersection with the Oregon Coast Highway (US Highway 101 [US 101]) at mile post 137.61. The ONA boundary begins about 0.2 mile west of the intersection. **Figure 1** presents the Yaquina Head ONA study area. The ONA site serves as the primary focus area for this study, although parking facilities and multimodal corridors outside the Yaquina Head ONA boundary are also considered in the context of connectivity and access for ONA visitors.

1.2. SITE HISTORY

The Yaquina Head Lighthouse (originally called the Cape Foulweather Light at Yaquina Point) was built in 1872. It is just one in a string of lighthouses strategically planned along the Pacific Coast by the US Lighthouse Service to allow mariners to sail the rocky coastline after dark.

In the early days, the area was wilderness with limited access to the lighthouse. The US Lighthouse Service extended a rough wagon road to bring supplies from the docks at Newport to the light station at Yaquina Head traveling partially along Agate Beach. Construction materials and supplies were mainly delivered to the small cove just south of the headland, where workers hauled them up the bluff, eventually using a tramway built in 1885 at present-day Cobble Beach. Along with the construction of the lighthouse and its associated oil house, a large dwelling for two keepers and their families was built east of the lighthouse tower. Other structures included a smaller keeper's dwelling, barn, water tank, cisterns, and a workshop. Keepers and their families raised livestock and tended a kitchen garden to supply herbs, fruits, and vegetables. As the wagon road gradually improved, early automobiles brought increasing numbers of visitors to the lighthouse and reduced the need for the keepers to tend a garden and raise livestock.

FIGURE 1: STUDY AREA

In 1966, a computer was installed at Yaquina Head Lighthouse and a resident keeper was no longer needed on the grounds. The unoccupied keeper's quarters eventually fell into disrepair and were eventually removed in 1984. Today, only the lighthouse, oil house, water tank, and garden remain at the site.¹

Between 1917 and 1983, quarrying activity removed huge amounts of basalt rock from Yaguina Head, carving out present-day Quarry Cove and the site of the Interpretive Center. Basalt rock from the quarries was crushed into gravel and used for various road construction projects, including US 101. In the 1970s, nearby residents expressed concerns about the impacts of the quarry activity, including the changing shape of the headland.² On March 5, 1980, US Congress designated about 100 acres of Yaquina Head as an Outstanding Natural Area to protect the unique scenic, scientific, educational, and recreational values of the lands. BLM now acts as caretaker for the site, conserving and protecting its natural values for all to enjoy. Ongoing efforts are focused on eliminating non-native vegetation and reintroducing native plants to improve habitat for wildlife and preserve the cultural landscape. Yaguina Head ONA also offers space to conduct research, collect data, and house monitoring equipment for many areas of science including geology, paleontology, biology, marine biology, archaeology, history, and social science.³

1.3. RECREATIONAL OPPORTUNITIES

Yaquina Head ONA provides multiple recreation opportunities including seal, sea bird, and wildlife viewing; whale watching; tide pooling; and numerous walking and biking trails. The offshore islands provide a year-round refuge for harbor seals and a spring-summer home for thousands of nesting seabirds. Gray whales can be spotted during their annual migrations to Mexico (during late fall-early winter) and Alaska (during late winter-early spring). During the summer months some gray whales feed in the shallow waters around the headland. Cobble Beach, named for the smooth, dark, rounded basalt stones that cover the beach, offers some of the best tidepool exploration in the area. When the tide is low, a vibrant ocean floor is revealed with pools of colorful animals including orange sea stars, purple sea urchins, and giant green anemones.

This 1975 photo shows the upper level of the Yaquina Head quarry where the present day Interpretive Center is located.

For a brief time, Quarry Cove provided access to the nation's only wheelchair-accessible tidepools. However, the ocean continually deposited sand in the pools, so the BLM decided to instead maintain Quarry Cove as an *Americans with Disabilities Act* (ADA)-accessible beach.

Many local residents regularly walk their dogs at the site. Leashed dogs are allowed on all trails and beaches but are not allowed inside the Interpretive Center or lighthouse. Walking, hiking, and biking are popular for both locals and out-of-area visitors to enjoy stunning views of the Oregon coast.

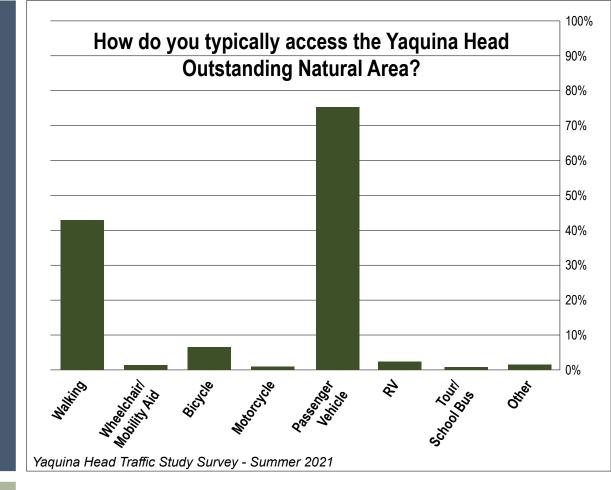

Other users visit Yaquina Head ONA to surf or hang/ paraglide. Communications Hill Trail provides access to 2 hang/paragliding launch sites. Pilots are instructed to check in with ONA staff prior to flying as there is at least one closure or restriction in force at all times. There are also several good viewpoints to watch these recreationists.

Guests are encouraged to visit the Interpretive Center to view exhibits, presentations, and videos on seabirds and marine life as well as human history on the headland. The center also features the wheelhouse of an historic ship, a recreated rocky island and its inhabitants, and a full-scale replica of the lighthouse lantern. For many years, peregrine falcons have built nests on the cliffs above the Interpretive Center. Visitors often congregate in the Interpretive Center parking lot to watch the falcons.

BLM staff and volunteers are available for visitors to ask questions. When weather and staffing conditions permit, ranger-led lighthouse tours are also offered.

46

Chapter 2: Outreach and Public Involvement

Education and public outreach are essential parts of fulfilling the responsibility to inform the public about the study process. Public involvement is critical to ensure the study reflects visitor and local community needs, issues, and values. Comments from the public foster cooperation and help BLM staff and local officials make informed decisions.

2.1. PUBLIC INVOLVEMENT PLAN

A *Public Involvement Plan* (PIP) was developed early in the study process to guide public participant opportunities throughout the study. The PIP outlined key audiences and proposed public participation strategies and opportunities for engagement with members of the public and stakeholders. The goal of the PIP was to facilitate ongoing public engagement throughout the study process to ensure the needs and concerns of all Yaquina Head ONA site users were appropriately identified and addressed. Using the PIP as a starting point, engagement activities were tailored over the course of the study in response to site, staffing, participant, and health and safety considerations. Specific public outreach activities that were conducted are noted in this chapter. Materials, such as press releases, advertisements, informational sheets, flyers, newsletters, and the survey summary are provided in **Appendix A**.

2.2. ONGOING PUBLIC ENGAGEMENT

Multiple involvement opportunities enabled participants to engage in the study process at their convenience. Key audiences included state and local officials, stakeholder organizations, and the public.

EMAIL CONTACT LIST

The study email contact list included individuals, organizations, or other groups with knowledge and interest in the study area as well as individuals who attended public meetings or signed up for the email list. Emails were sent to notify study contacts of key milestones during study development.

STUDY WEBSITE

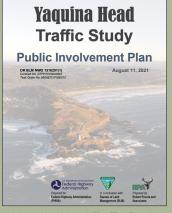

A website (<u>https://www.yaquinalights.org/yaquina-head-traffic-study/</u>) was developed to encourage public interaction and to provide information. The website was hosted by Friends of Yaquina Lighthouses (FOYL) and contained contact information, an overview of the study purpose, study announcements, newsletters, maps, and study documents. The planning team updated the website throughout the study process as new information and materials became available.

2.3. TARGETED OUTREACH

Targeted outreach activities were scheduled to share important study information, obtain meaningful input and dialogue about the study process, and to identify important considerations for potential improvements. The following outreach activities were conducted to interact with the study oversight committee (OC), stakeholders, and the public.

2.3.1. Oversight Committee (OC)

A study OC was established with representatives from FHWA, BLM, Oregon Department of Transportation (ODOT), and the City of Newport. The OC met throughout the course of the study to discuss progress, review materials, and provide feedback. The committee provided guidance to the consulting team and reviewed study documentation before publication.

Yaquina Head Traffic Study Public Involvement Plan Cover

aquina Head Traffic Study website homepage

YAQUINA HEAD TRAFFIC STUDY OR BLM NWO 1516291(1)

2.3.2. Public Outreach

Public outreach activities were conducted at key points during the planning study. The first outreach effort occurred during the initial evaluation of existing and projected conditions. The second outreach coincided with the release of the *Existing and Projected Conditions Memorandum*, and the third outreach event was conducted in tandem with release of the draft *Yaquina Head Traffic Study*.

PUBLIC OUTREACH #1 - SUMMER 2021

The first public outreach effort took place between August 13 and September 10, 2021, and consisted of a public survey and launch of the study website. The purpose of this initial outreach effort was to explain the study process and gather information from the public and stakeholders to identify issues and concerns relating to the site. The effort allowed members of the public to learn about the study and provide feedback about transportation-related issues and concerns.

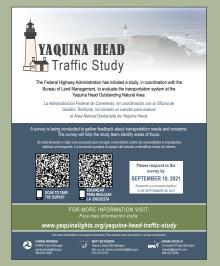

Members of the consultant team, BLM, and FHWA were onsite at the ONA to kick off the outreach effort and boost participation in the survey. Team members set up a booth at the ONA on August 13th with tablets available for the public to take the survey. The team was also available to answer questions about the study. Before the site opened in the morning, the team was stationed at the entrance station to catch neighborhood residents walking into the site outside of normal operating hours. In the late morning/early afternoon, the team was stationed at the lighthouse.

Several methods, including print and electronic formats developed in both English and Spanish, were used to notify the public and stakeholders of the survey and website and to promote overall engagement. The website contained links to the survey in both English and Spanish, a brief video explaining the study process, and the study newsletter. An email update was sent to the study contact list announcing the study, survey, and website. Flyers were posted around the site and handed out to public venues in Newport (including the library, post office, recreation center, and local businesses). Newsletters explaining the study process and announcing the survey were available at the Interpretive Center gift shop. Small handouts with a QR code directing visitors to the survey were given to BLM staff to provide to visitors throughout the survey duration. A news release was also shared with local media outlets.

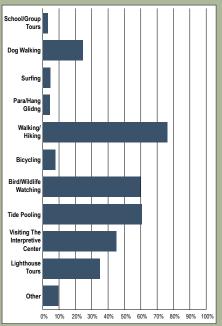

The survey was an opportunity for visitors to share concerns and ideas regarding transportation at Yaquina Head ONA to help the team identify areas of focus for the study. A total of 251 respondents participated in the survey.

PUBLIC OUTREACH #2 – WINTER 2022

The second public outreach effort occurred in February 2022 corresponding with release of the *Existing and Projected Conditions Memorandum*. Outreach activities included updated website content, posts on the FOYL social media accounts, and an email to the study contact list announcing availability of the report. A summary of key findings from the analyses contained in the report was also provided.

Flyer for public outreach #1 posted at the site and around Newport

Survey results from August 2021: Which activities have you participated in during visits to the ONA?

Social media post on FOYL Facebook page

PUBLIC OUTREACH #3 - SPRING 2022

A third public outreach effort was conducted from May 16 to June 17, 2022, corresponding with release of the draft *Yaquina Head Traffic Study*. Outreach activities included updated website content and a postcard and email to the study contact list announcing availability of the report. A total of five written public comments were received. A list of the comments and responses are provided in **Appendix A**.

Postcard mailers were sent to the properties neighboring Yaquina Head ONA to announce the release of the draft traffic study and opportunity for public and stakeholder comment.

2.4. PUBLIC AND STAKEHOLDER FEEDBACK

Public and stakeholder comments were collected and considered throughout the study process. A public survey was conducted to understand public priorities, needs, and visiting characteristics. Common themes relating to primary topics of interest are summarized in this section. A summary of comments received over the course of the study is provided in **Appendix A**.

ENTRANCE STATION

Visitors and staff are frustrated with the congestion at the entrance. To help alleviate congestion during peak periods, staff stand in traffic to conduct "line busting" which involves standing in live

traffic between traffic cones and directing pass holders to proceed to the left side of the booth through one of the lanes typically used for outbound traffic. An extra lane would be helpful to allow pass users, deliveries, and staff to bypass visitor lines or expedite visitor processing time. A reservation system, especially during peak periods, could also be helpful. Hours and fees should be posted near the US 101 intersection, and a turn-around opportunity should be provided before the fee booth.

PARKING (GENERAL)

The use of RV/bus and ADA parking spaces should be better enforced, and more of each type of parking stall is desired. Additional offsite parking may be beneficial to encourage walking/ biking into the site. Electric vehicle/ bicycle charging stations could also be helpful. Parking by Communications Hill is useful for hang/paragliders.

VEHICLES

Minimizing vehicle access is desirable to some visitors. Consideration of noise and pollution impacts of vehicles is a concern. Improvements should be sensitive to traffic fluctuations throughout the

year, not just addressing peak periods.

PEDESTRIANS

Better accessibility for disabled individuals is desired. Sidewalks or separated paths along Lighthouse Drive (from US 101 intersection and ONA entrance) are also desired. Improved visibility

at crosswalks would be beneficial, especially near the Keeper's Garden. Providing walking distances on maps may help promote walking.

SAFETY

Speed enforcement is desirable and speed bumps were suggested to help slow vehicles. Lowering the speed limit through the site and providing speed feedback signs may also help reduce speeds. Providing physical separation of vehicles from pedestrians and bicyclists may help increase user comfort and safety. There are active landslides within the site, especially near the entrance station. Visitor safety is a concern in a landslide event.

LIGHTHOUSE PARKING AVAILABILITY

Visitors expressed frustrations regarding the cones forcing vehicles into the Interpretive Center lot, especially when the lighthouse lot was not full. A display of the number of open spots at the lighthouse could

be helpful, or at least a sign indicating that the lighthouse lot is full. Better indication of distances/walking options at the Interpretive Center would help promote more walking to the lighthouse. Consider potentially limiting parking/driving to the lighthouse to disabled individuals and tour groups.

MULTIMODAL OPTIONS

A shuttle is desired by some to limit vehicle use at the site. BLM could consider coordinating with other Oregon Coast recreation sites. Additional trails are also desired. Bike access

from US 101 is perceived as unsafe. Improving public transportation to the site is desirable.

EMERGENCY RESPONSE

Consideration of how improvements would function during emergencies is important. Improvements should address emergency transportation issues both for small-scale and largescale emergencies, such as fire, earthquake, or tsunami. A threshold of maximum capacity should be considered to allow safe evacuation in the event of an emergency.

OTHER

Other general comments that were received throughout the planning process are summarized below.

- Access for hang gliders and paragliders is very appreciated.
- The rangers are extremely helpful and friendly, and communicating with them enhances the visitor experience.
- Drone use at the site is not desirable.
- Road improvements/maintenance on Lighthouse Drive are needed.
- Closing at sunset makes it difficult for visitors to obtain sunset photos.
- · Protecting the environment is important to visitors.
- Moving the gates before the fee station could help with management of the site during off hours.
- Theft has occurred in the past and increased security of the site is desirable.

52

g

Chapter 3: Transportation System

The study evaluated the existing transportation system to establish the current traffic conditions and to identify areas of concern. The following analysis of transportation conditions includes an examination of existing traffic data, vehicle crash history, field observations, pavement conditions, aerial imagery, and geographic information system data. Existing data were provided by ODOT, and additional traffic data were collected by RPA in 2021. The available information supplemented with the collected data were used to establish the existing transportation characteristics and conditions. **Appendix B** provides additional details about existing and projected transportation conditions within the study area

3.1. PHYSICAL FEATURES AND OPERATIONAL CHARACTERISTICS

Lighthouse Drive serves multiple residential and commercial areas and provides access to Yaquina Head ONA. The following sections discuss physical features and operational characteristics of the roadway and adjacent parking areas and multimodal corridors.

3.1.1. Roadway Surface and Width

The entirety of Lighthouse Drive is paved from the US 101 intersection to the lighthouse parking lot. From the US 101/Lighthouse Drive intersection to the Yaquina Head ONA entrance gate, the widths on Lighthouse Drive are generally 21 feet with minimal shoulders. Past the entrance gate, the widths on Lighthouse Drive vary from 24 feet to 35.5 feet in width with 1.5-foot to 6-foot shoulders. The widest stretch of roadway occurs just beyond the entrance gate. The narrowest section of roadway within Yaquina Head ONA is 12 feet and occurs on the Quarry Cove access road beyond the upper parking lot.

3.1.2. Intersecting Facilities and Traffic Control

Based on field review and aerial photography, 10 intersecting vehicular facilities occur along Lighthouse Drive, including a variety of public roadways, private approaches, recreational accesses, and parking areas. Outside the Yaquina Head ONA, existing traffic control on Lighthouse Drive consists of a traffic signal at the US 101/Lighthouse Drive intersection and stop signs on some approach roadways including NW Agate Way, the Hill Buffet and Grill driveway, and NW Rocky Way to the north. Within the Yaquina Head ONA, stop signs are placed on the Quarry Cove and Interpretive Center access roadways.

The US 101/Lighthouse Drive intersection is signalized; all other intersecting roadways are stop controlled.

3.1.3. Traffic Circulation and Parking

Within the Yaquina Head ONA, vehicular traffic uses Lighthouse Drive to enter the site and to reach key destinations. Additionally, the Quarry Cove roadway provides access to the upper and lower parking areas at Quarry Cove. Several parking opportunities are available both within the site and the surrounding area to serve visitors. The total number of parking stalls provided in each lot is summarized in **Table 1** at the end of this section. **Figure 2** provides a map showing the locations of the available parking areas. Stakeholders have noted a desire for additional large vehicle and ADA parking stalls within the Yaquina Head ONA.

ENTRANCE STATION CIRCULATION

After entering the Yaquina Head ONA site, visitors proceed to the entrance station where they are greeted by a ranger and either pay an entrance fee or present a valid pass. For credit card purchases, visitors are directed to an automated fee machine (AFM) kiosk located just to the west of the main booth.

During peak visitation periods, a traffic queue extends along Lighthouse Drive and sometimes reaches back to the US 101 intersection, according to BLM staff.⁴ To expedite visitor processing during these times, BLM staff conduct what is called "line busting" which involves standing in live traffic between traffic cones and directing pass holders to proceed to the left side of the booth through one of the lanes typically used for outbound traffic. This can create a conflict with pedestrians walking from the AFM kiosk back to the booth to pick up a pass from the ranger.

Occasionally, drivers decide not to proceed into Yaquina Head ONA and attempt to turn around before the entrance station. These maneuvers are generally not safely accommodated by the existing traffic control and entrance configuration.

During periods of peak visitation, traffic queues at the entrance station have extended to the US 101 intersection.

QUARRY COVE CIRCULATION AND PARKING

The Quarry Cove access road is a single-lane, one-way couplet serving vehicles entering and existing the Quarry Cove recreational area. A pullout is provided on the south side of the couplet that is used for parking. In addition, 2 separate paved parking lots are available for visitor use off the Quarry Cove access road. The northern parking lot, referred to as the upper lot, consists of 12 angled parking stalls, 3 perpendicular parking stalls, 2 ADA-compliant stalls, and 3 large vehicle parking stalls. Restroom facilities are provided as well as dedicated crosswalks with access to and from the upper and lower Quarry Cove Trails. The configuration of this lot is confusing and lacks clear direction for vehicle circulation. One-way signs appear to point in opposing directions, and some personal vehicles were observed circulating through areas striped as large vehicle parking stalls. Additionally, BLM staff have reported that visitors sometimes cross the solid yellow line into the oncoming lane to reach the gated ADA access roadway.

An additional lot, referred to as the lower lot, is located on the southern side of the Quarry Cove access road. This lot contains 31 perpendicular parking stalls and 2 ADA parking spots. A small turnaround area is provided at the eastern end of the lot. This lot generally does not accommodate large vehicles due to its narrow configuration.

The Quarry Cove parking lot consists of two levels; upper (pictured) and lower. The circulation pattern of the lot can be confusing to visitors.

INTERPRETIVE CENTER CIRCULATION AND PARKING

The Interpretive Center parking lot is a popular parking area for visitors. It offers 126 perpendicular parking stalls, 4 of which are designated for Official Vehicles Only. The lot also provides 6 angled stalls and 8 ADA stalls. A lane designated for large vehicle parking is provided parallel to the parking lot entrance lane, and some drivers confuse the parking lane for a circulation route. The lane provides space for approximately 3 large vehicles. BLM staff have indicated that RVs sometimes park in the angled stalls near the maintenance building as well as in undesignated areas along the perimeter of the lot during busy times. When the Interpretive Center is open, BLM uses traffic cones to channel westbound vehicles from Lighthouse Drive into the Interpretive Center parking lot. This configuration is used to circulate visitors through the Interpretive Center lot in the hope that visitors will park and walk down to the lighthouse rather than driving. Once inside the Interpretive Center lot, the intended circulation pattern directs visitors around the outside edge of the lot in the counterclockwise direction. Visitors often express frustration with the cones and sometimes perform unsafe maneuvers to avoid circulating or parking in the Interpretive Center lot. Some drivers have been observed swerving around the cones to continue on Lighthouse Drive, while other drivers enter the parking lot and immediately make a U-turn in order to leave the lot and continue west on Lighthouse drive. These maneuvers result in increased potential for user conflicts within the parking area and on Lighthouse Drive.

When the Interpretive Center is open, BLM staff set out cones forcing visitors into the Interpretive Center parking lot. The cones are sometimes bypassed and can be confusing to visitors.

A small pet relief area is provided northeast of the parking lot with a short loop trail/mowed corridor. Pedestrian access to the lighthouse is provided from this lot via the Lighthouse Trail which wraps around the Interpretive Center, crosses under Lighthouse Drive, and continues along the south edge of Lighthouse Drive. Some visitors were observed walking from the parking lot to the intersection with Lighthouse Drive and then continuing west along Lighthouse Drive, despite the lack of dedicated pedestrian facilities on this route.

LIGHTHOUSE CIRCLE CIRCULATION AND PARKING

The lighthouse parking area is a one-way loop with angled parking around the outside edge. Access to the Yaquina Head lighthouse and Cobble Beach are provided on the western edge of this lot. A small area with additional parking is also provided off the east side of the parking lot, providing direct access to Salal Hill Trail, restroom facilities, and a small maintenance building.

In total, the lot provides 26 angled parking stalls, 11 perpendicular stalls, 3 designated ADA stalls, 2 stalls for Official Vehicles Only, and 3 stalls designated for large vehicle parking. Sidewalk is provided along the outside edge of the parking lot, however, pedestrians are often observed walking across the center island and within the vehicle travel lanes as a shortcut to reach their desired destination.

The RV stalls in the lighthouse parking lot are sometimes occupied by personal vehicles.

ERNEST BLOCH MEMORIAL WAYSIDE PARKING

The Ernest Bloch Memorial Wayside parking area is located adjacent to US 101 and is accessed from NW Gilbert Way. The lot offers 65 perpendicular parking stalls, 3 large vehicle stalls, and 3 designated ADA stalls. A crosswalk is provided across NW Gilbert Way allowing access from adjoining sidewalks next to the parking area. Some visitors choose to park in this area and walk into the Yaquina Head ONA, despite the lack of designated pedestrian facilities between US 101 and the Yaquina Head ONA site.

INFORMAL PARKING

Several informal parking areas are located within the site, including along the Quarry Cove access road and on Lighthouse Drive. A small parking area exists approximately 130 feet west of the US 101/Lighthouse Drive intersection that offers 11 parking stalls and allows visitors to walk down to the beach or to Yaquina Head ONA. The pullouts on Lighthouse Drive within the ONA are often used by visitors for parking, although BLM staff indicated these pullouts are provided as short-term viewpoints and are not intended for long-term parking purposes. Staff also noted concerns about visitors attempting to park in these pullouts with the end of their vehicles partially in the roadway. Some visitors, especially hang/paragliders, also park in the widened area at the base of Communications Hill.

The Ernest Bloch Memorial Wayside parking lot is located approximately in the southwest quadrant of the US 101/ Lighthouse Drive intersection.

A few small pullouts are located on Lighthouse Drive. The pullouts are intended to be for short-term photo opportunities but are often used for longerterm parking.

| Parking Lot | Perpendicular Stalls | Angled Stalls | ADA Stalls | Large Vehicle Stalls | Official Vehicles Only Stalls | Total Stalls |
|-------------------------------|-------------------------|------------------|------------|-------------------------|----------------------------------|--------------|
| Quarry Cove (Upper) | 12 | 3 | 2 | 3 | | 20 |
| Quarry Cove (Lower) | 31 | | 2 | | | 33 |
| Interpretive Center | 122 | 6 | 8 | ~3 | 4 | 143 |
| Lighthouse Circle | 11 | 26 | 3 | 2 | 3 | 45 |
| Ernest Bloch Memorial Wayside | 65 | | 3 | 3 | | 71 |
| Informal Parking* | | 11 | | | | 11 |
| Total Stalls | 241 | 46 | 18 | 11 | 7 | 323 |

TABLE 1: AVAILABLE PARKING

*Only marked parking stalls are included.

YAQUINA HEAD TRAFFIC STUDY OR BLM NWO 1516291(1)

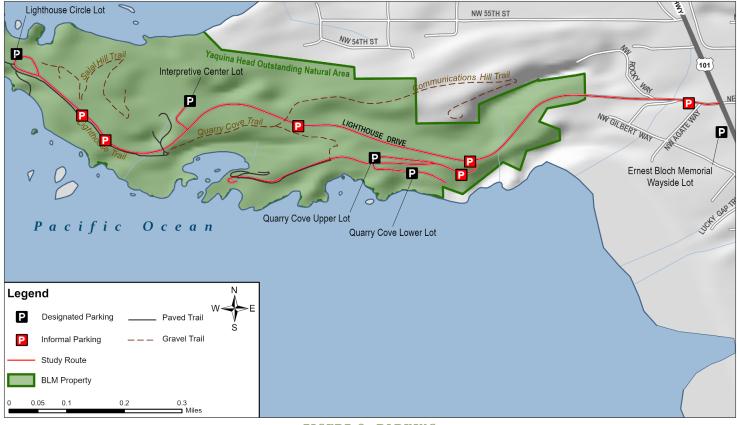

FIGURE 2: PARKING

3.1.4. Utilities

Several utilities are located within the Lighthouse Drive corridor including underground telephone, gas, power, water, and sanitary sewer. The utilities are generally located along the roadway centerline with meters located sporadically along the corridor on both sides of the roadway. Overhead power and telephone lines also cross Lighthouse Drive about 400 feet west of the US 101/ Lighthouse Drive intersection.

The US Coast Guard maintains the facilities at the top of Communications Hill. The site includes communications equipment for aircraft, a cell phone tower, and research equipment for Oregon State University. Vehicular access to Communications Hill will need to be maintained so these facilities can be properly serviced.

An AFM is located at the entrance gate outside of the fee booth and is used to collect credit card payments. Electrical utilities including a high voltage switch pad, telephone utilities, and a meter are located at the entrance station. Additionally, the entrance booth includes a staff restroom served by water and sanitary sewer utilities.

3.1.5. Bridges and Culverts

Three intermittent unnamed streams cross Lighthouse Drive. The first stream crosses Lighthouse Drive approximately 250 feet west of the US 101 intersection. The second stream crosses Lighthouse Drive at the entrance station. The third stream crosses Lighthouse Drive near the Interpretive Center. No drainage features for these streams were identified based on available asbuilts and field survey.

Utilities are provided near the entrance station for the AFM.

One culvert was identified on Lighthouse Drive durina field investigations. The culvert was located approximately 200 feet west of the Quarry Cove entrance roadway. A few drainage culverts are also located near the Interpretive Center in the vicinity of Lighthouse Trail. Supplemental review of available as-built drawings confirms no other hydraulic features within the Yaquina Head ONA boundary.

3.1.6. Right-of-Way

BLM recently performed a boundary retracement to confirm their property boundary. The BLM right-of-way boundary occurs approximately 0.2 mile west of the US 101/Lighthouse Drive intersection. As seen in **Figure 3**, the BLM right-of-way is fairly wide with the exception of a pinch point just before the entrance station, where there is approximately 15 feet between the BLM boundary and the edge of the existing pavement. The northern BLM boundary borders the adjacent subdivisions. A city-owned water tank is also located just north of the BLM boundary and there has been discussion from the city about possibly moving the water tank or replacing it with a pump.

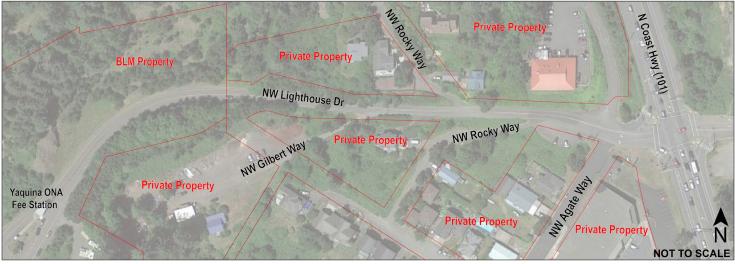

FIGURE 3: RIGHT-OF-WAY MAP

3.1.7. Maintenance Responsibility, Activities, and Vulnerabilities

ODOT is responsible for maintenance of US 101 and the Ernest Bloch Memorial Wayside parking area. The City of Newport is responsible for maintenance of Lighthouse Drive west of the US 101 intersection to the Yaquina Head ONA boundary. BLM is responsible for maintenance of Lighthouse Drive beginning at the Yaquina Head ONA boundary as well as all trails, parking areas, and buildings within the Yaquina Head ONA boundary.

BLM uses crack sealing techniques to repair cracks in the pavement at the ONA.

Historical asphalt maintenance records were provided by Yaquina Head ONA staff. The records include contract work dating back to 1998 and more recent maintenance work completed internally by BLM facilities staff. Records show that BLM staff conducts periodic maintenance including application of slurry seal, striping, and crack sealing. Several locations along the Lighthouse Drive corridor have experienced pavement failures including transverse and longitudinal cracking and sloughing. The cause of these failures is typically a weakened or deteriorating subgrade. This distress on the pavement can be caused by a variety of factors including poor drainage, erosion, frost heave, lack of compaction, or weak materials. BLM staff noted an ongoing issue with sloughing on the Quarry Cove access road, which was previously filled and patched but continues to deteriorate.

3.1.8. Alternative Transportation Facilities and Services

PEDESTRIAN AND BICYCLES

Multiple pedestrian and bicycle opportunities are provided at Yaquina Head ONA. Visitors entering the site on foot or by bike do not have to pay amenity fees. Once inside the ONA, pedestrian trails range in difficulty and surface type. Bicycles are only allowed on paved areas of the site and on the Communications Hill Trail. **Table 2** summarizes trails at Yaquina Head ONA, and **Figure 4** displays them graphically.

| Trail Name | Rating | Walking Time | Steepest Grade | Surface Type | Bicycles Allowed? | Wheelchair Accessible? | Notes |
|------------------------------|-------------------|--|-------------------|-----------------|----------------------|---------------------------|--|
| Quarry Cove Trail (Lower) | | | | Paved | | Yes | Access to Quarry Cove ADA Beach Disabled users can drive down to beach |
| Quarry Cove Trail (Upper) | Most Difficult | 10 minutes each way (to Interpretive Center) | 33% | Gravel | No | No | Steep concrete stairs Connection to Communications Hill and Lighthouse Trails |
| Lighthouse Trail | Most Difficult | 10 minutes each way (to Interpretive Center) | 8% | Asphalt | No | Yes | Paved path on south side of Lighthouse Drive separated from the roadway by guardrail Access to Cobble Beach via steep wooden stairs |
| Salal Hill Trail | Moderate | 25-30 minutes round trip | 36% | Unimproved | | No | • Accessed from lighthouse parking lot behind the keeper's garden leading to a point above the Interpretive Center |
| Communications Hill Trail | Most Difficult | 15 minutes each way | 15% | Gravel Road | Yes | No | Trailhead to hang/paragliding launch sites Primitive trail to water tank and Agate Beach neighborhood |
| Lighthouse Access | | | | Sidewalk | | Yes | •Recently reconstructed sidewalks from lighthouse parking lot to lighthouse and observation decks |

TABLE 2: YAQUINA HEAD ONA PEDESTRIAN AND BICYCLE TRAILS

-- Not stated on trail signs.

Source: Bureau of Land Management, Trail Wayfinding signs, viewed on site in May 2021.

Other designated trails or pedestrian/bicycle routes in the vicinity of the study area are listed as follows.

- <u>Lighthouse to Lighthouse Trail</u>: Lighthouse Drive is featured as part of the 10-mile trail on Newport's published bike maps. The route connects the Yaquina Bay and Yaquina Head Lighthouses traveling mainly on city streets and US 101.
- <u>Oregon Coast Bike Route:</u> US 101 between the northern and southern Lincoln County lines is a designated bike route on the Lincoln County Bicycle Route Map. Bike lanes are provided on US 101 through the study area.
- <u>Oregon Coast Trail (OCT):</u> A 362-mile hiking trail follows the Oregon coastline along beaches, state parks, public lands, US 101, city streets, and some easements on private property. Some sections called "gap sections" are identified in areas that are disconnected, inconvenient, unsafe, or inaccessible during certain seasons. The Agate Beach gap section instructs trail users to take 55th Street to US 101 and continue south following signs to Yaquina Head Lighthouse then returning to the beach at the Agate Beach access/parking area.

The Yaquina Head area is identified as a gap section in the OCT because the area lacks connectivity along the coastline.

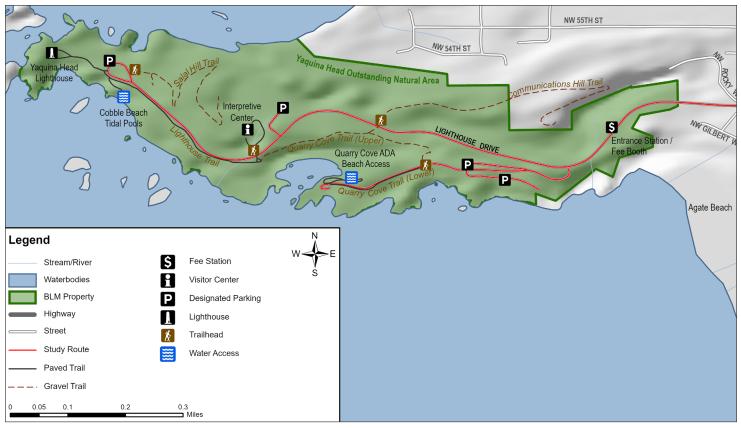

FIGURE 4: YAQUINA HEAD ONA TRAILS

TRANSIT

Lincoln County Transit provides transit services to the Newport area via a city loop and inter-city routes between Lincoln City, Siletz, Yachats, Corvallis, and Albany.

- The Newport City Loop completes a full loop through Newport 6 times each day, 7 days a week. Buses are wheelchair accessible with bicycle racks. The closest transit stop to Yaquina Head ONA is Bloch Wayside/52nd Street and is provided by request only.
- The Transit Intercity North County route provides daily service along the coast in Lincoln County north of Nye Beach. Monday through Saturday, the bus completes 5 loops and stops at the US 101/NE 52nd Street intersection by request in the northbound direction only. On Sundays, the bus completes 4 loops and stops at the US 101/NE 52nd Street intersection on the first loop of the day and by request on the other 3 loops in the northbound direction only.
- The Coast to Valley Express is a service provided through a partnership between Lincoln County Transit and Benton County Transportation. The bus operates 7 days a week with 4 daily runs between Albany, Corvallis, and Newport with optional connections to Portland, the Portland International Airport, and other destinations on the coast. The Newport stop is located at Newport City Hall.
- A **Dial-A-Ride** service is also provided within the City of Newport. The buses operate from 8:00AM to 3:30PM Monday through Friday by reservation.

3.2. GEOMETRIC CONDITIONS

Existing roadway geometrics for Lighthouse Drive were evaluated and compared to current standards. As-built drawings from 1995 were available for the segment of Lighthouse Drive extending from the entrance station to the lighthouse parking lot. Field review and aerial photography were used to document existing roadway geometrics in this segment.

The collected traffic volumes classify Lighthouse Drive as a very low volume local road. Based on nationally accepted design standards, Lighthouse Drive generally meets all minimum design requirements regarding roadway widths, horizontal and vertical alignment, sight distance, and clear zone widths. The following deficiencies were identified:

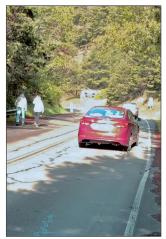

- A narrow portion of the Quarry Cove access road does not meet the minimum roadway width.
- The curves on the Quarry Cove access road do not meet the minimum radii standards. This portion of the study area is signed at 15 miles per hour (mph), and none of the horizontal curves are considered to be potential areas of concern.
- The two curves to the east of Communications Hill were identified as providing limited sight distance due to the density of trees adjacent to the roadway.
- It is not always feasible to provide wide clear zone distances or side slopes due to the existing context of the roadway, including steep embankments or dense tree growth. Guardrail is in place along Lighthouse Drive in areas without sufficient side slopes.

A few locations at the Yaguina Head ONA do not meet minimum geometric design requirements.

3.3. SAFETY

Concerns for pedestrian and bicycle safety have been noted and observed within Yaquina Head ONA and the surrounding area. In general, there is a lack of a continuous, dedicated facility for pedestrians on Lighthouse Drive. As a result, visitors entering the ONA on foot are often observed walking along the roadway shoulder and sometimes in the travel lanes. BLM staff and the public have noted potential conflicts between vehicles and pedestrians, especially in the section of Lighthouse Drive between the US 101 intersection and the entrance and high speeds further station.

Due to a lack of dedicated pedestrian facility on Lighthouse Drive, many pedestrians walk in the roadway. Blind curves compound safety concerns.

The ONA tends to experience high traffic volumes during peak periods at the entrance station, Keeper's Garden, and Lighthouse Circle, all of which lack dedicated crosswalks. Pedestrian-vehicle conflicts create safety concerns at these locations, within parking areas, and at other key crossing locations on Lighthouse Drive. At the entrance station, conflicts have been observed between pedestrians and opposing traffic as well as vehicles performing unsafe turnaround maneuvers. Staff safety has also been noted as a potential concern, particularly when staff are conducting line busting activities in live traffic. At Lighthouse Circle, there are no dedicated crosswalks or paths through the center of the parking lot. Many visitors walk randomly throughout the parking lot creating concerns for potential conflicts, especially since the mound in the center island blocks drivers' views.

Several other areas within the Yaquina Head site also lack pedestrian facilities or provide poor visibility. While some sidewalk is provided on the Quarry Cove access road, there is a gap in the sidewalk between the pullout on the south side of the couplet and the lower parking lot. The crosswalk between Quarry Cove Trail and Communications Hill Trail is located after a set of s-curves. Drivers sometimes travel too fast around these curves and do not realize there is a crosswalk approaching.

A continuous, protected pedestrian facility along the length of Lighthouse Drive is desired to improve pedestrian safety. Enhanced wayfinding may be needed to direct pedestrians to the path and reduce the potential for pedestrians in the roadway.

BLM staff and regular visitors have noted concerns regarding vehicle speeding issues on Lighthouse Drive. Speeding is primarily a concern on the segment of Lighthouse Drive between US 101 and the entrance station. Aggressive and unsafe driving has also been observed at the Interpretive Center intersection, with some visitors swerving into the opposing lane of traffic to bypass the cones directing traffic into the Interpretive Center parking lot. Visitors often circle the lighthouse parking lot waiting for parking spaces to become available, which causes congestion and general safety concerns since there are often pedestrians walking in the roadway at this location. Some visitors park in undesignated areas which sometimes includes obstructing travel lanes.

3.4. TRAFFIC CONDITIONS

Lighthouse Drive serves a variety of access purposes including residential, commercial, and recreational. Heading west from the US 101 intersection, approximately the first 0.1 mile of roadway contains several approaches that provide access to residential areas and businesses. The remainder of Lighthouse Drive generally serves users who are intending to visit Yaquina Head ONA. Passenger cars, delivery trucks, buses, RVs, emergency vehicles, bicycles, and pedestrians are all common on the roadway.

3.4.1. Visitor Entry Data

The BLM staff at the Yaquina Head ONA entrance station collect visitor entry data each day during regular operating hours. The staff tracks entering users and classifies them based on payment type, transportation mode, and visitor type. To approximate the total number of visitors, BLM uses a generalized estimate of 3 visitors per vehicle. Upon entry, BLM classifies vehicles as either a recreational or a non-recreational vehicle. Non-recreational vehicles include BLM staff, delivery vehicles, utility and maintenance vehicles, contractors, and other non-visitor vehicles. Recreational vehicles include all other vehicles which are assumed to be occupied by visitors. Only recreational vehicles are included in the visitation count.

Monthly visitor entry data were provided for the years 2015 through 2019. Overall, visitor numbers exhibited a steady growth rate of 2.8 percent per year. The data show that approximately 2,500 people visit Yaquina Head ONA on a typical day during the peak season, with spikes in visitation occurring over the weekends of Memorial Day and July 4th and at the end of July. The number of visitors recorded per month at the site over the 5-year period from 2015 to 2019 is displayed in **Figure 5.** As shown in the figure, visitation observed in July. Numbers begin to decrease In October, and low volumes are recorded throughout the winter season. A slight increase in visitation is observed in the month of March, potentially corresponding to spring break and the spring gray whale migration.

An analysis of visitor transportation mode was also performed. Of the data provided by BLM, an average of 39 pedestrians, 6 bicycles, and 803 recreational vehicles were observed each day. This translates to approximately 2,450 daily visitors. Note, these values are recorded during the hours that the site is open and staffed by BLM. Many residents enter the site by foot or by bicycle before and after hours.

Upon entry, vehicles either present their pass (week, annual, or lifetime) or pay a fee to be issued a pass. When visitors have their pass already in hand, processing time at the gate is typically expedited. While there is considerable variability each day, the average mix of passes in hand and passes issued is nearly equal (53 and 47 percent, respectively). At the highest, the percent of visitors with a pass already in hand was 67 percent and was lowest at 24 percent.

20

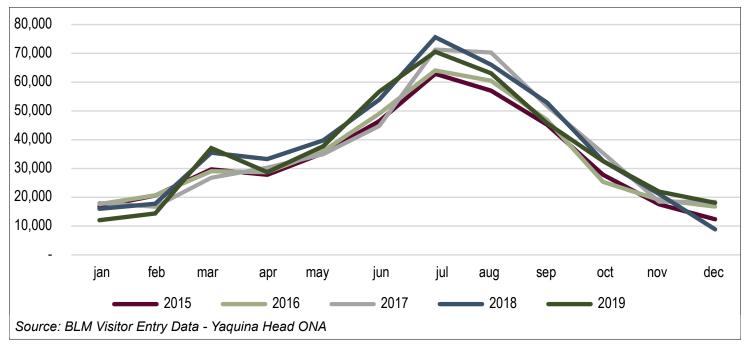

FIGURE 5: VISITORS PER MONTH

3.4.2. Traffic Volumes and Speeds

Traffic data were collected at Yaquina Head ONA in August 2021 including traffic volumes and speed information. Pneumatic road tubes were placed on Lighthouse Drive before and after the entrance station, on Lighthouse Drive between Quarry Cove and the Interpretive Center, on Lighthouse Drive near the Keeper's Garden, and along the access road for Quarry Cove to collect data. **Figure 6** presents a map of the locations where traffic data were collected along with the resulting volume data from the counts. See **Appendix B** for more information.

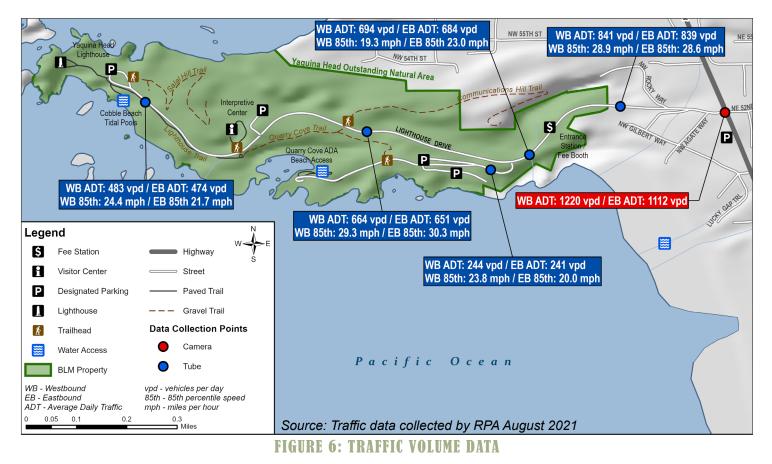

LIGHTHOUSE DRIVE TRAFFIC VOLUMES

Between 7:00 AM and 8:00 PM, a total of 586 and 694 vehicles entered the site on Friday and Saturday, respectively. A higher volume of traffic was observed on Saturday, which is expected given the recreational nature of Yaquina Head ONA. The entering and exiting patterns were found to be different between the two days, with a larger percentage of daily visitors arriving in the morning and leaving before noon on Friday. On Saturday, visitors appeared to arrive later and stay at the site longer with no defined peaks throughout the day. Based on a comparison of the number of vehicles counted at the sites both before and after the entrance, approximately 15 percent of vehicles on Lighthouse Drive reached the entrance and turned around without continuing into the site. The parking lot at the end of Lighthouse Drive has 37 personal vehicle stalls, 3 large vehicle stalls, and 3 ADA accessible stalls. An additional 2 stalls are designated for official use only. Based on the collected traffic counts on Lighthouse Drive near the Keeper's Garden, this parking area reached or surpassed available capacity about 10 percent of the time on Friday and about 7 percent of the time on Saturday. On Friday, the lot was at capacity (45 cumulative vehicles or more) between 10:00 AM and 11:30 AM. The peaks on Saturday exceeded 45 vehicles for only one 15-minute interval at 10:30 AM. When the Interpretive Center is open, vehicles are directed into the Interpretive Center parking lot by cones placed at the intersection.

QUARRY COVE ACCESS ROAD TRAFFIC VOLUMES

Beyond the Yaquina Head ONA entrance, pneumatic road tubes were placed along the access road for Quarry Cove. The Quarry Cove parking lot has approximately 55 parking stalls. Based on the volume counts on the Quarry Cove access road, this parking lot never reached capacity on the days of observation. On Friday, two peaks occurred at 11:30 AM and 3:00 PM with approximately 16 vehicles each. On Saturday, 1 distinct peak occurred at 11:45 AM with 25 vehicles. Generally, 10 or more vehicles were counted in the Quarry Cove area for the majority of the day from 11:00 AM until 5:30 PM.

VEHICLE SPEEDS

22

Most of the site is signed at 25 mph, except the Quarry Cove access road and Lighthouse Drive in the eastbound direction only near the Keeper's Garden, which are signed at 15 mph. US 101 through the study area is signed at 45 mph. Input from BLM suggested that posted speed limits are not well respected within the Yaquina Head ONA boundaries, and vehicles often speed through the site, endangering non-motorists and motorists alike.

Along with traffic volume information, the pneumatic tube counters were used to collect speed data. Using the collected data, the 85th percentile speed was determined for each count site. The 85th percentile speed is the speed at or below which 85 percent of vehicles are observed to travel. **Figure 6** presents the observed 85th percentile speeds. See **Appendix B** for more information.

Based on the 85th percentile speeds, all vehicles generally traveled below or within about 5 mph of the posted 25 mph speed limits. The most common spots at which speeding vehicles were noted were within the 15 mph zones. In the westbound direction on the Quarry Cove access road, 88 percent of vehicles were observed exceeding the speed

limit. Near Keeper's Garden, 20.2 percent of vehicles were observed exceeding the 15 mph speed limit. For all 25 mph zones combined, approximately 4.3 percent of vehicles were observed speeding. Comparatively, about 32.8 percent of vehicles were speeding within the combined 15 mph zones.

3.4.3. Projected Growth and Traffic Conditions

The Newport Transportation System Plan⁵ (TSP) forecasted future (2040) traffic conditions using the latest (2018) Newport Travel Demand Model developed and maintained by ODOT. The model predicted future traffic volumes based on an assumed 21 percent overall increase in households and 20 percent increase in the number of jobs in Newport.

Based on TSP assumptions, Lighthouse Drive could experience traffic volumes greater than 3,000 during the peak summer season within the next 20 years. During the spring season, upwards of 2,500 vehicles could be observed on Lighthouse Drive by 2042.

Chapter 4: Environmental Setting

The environmental setting includes naturally occurring features and populations as well as human influences and characteristics. These elements provide context for transportation projects and may serve as potential constraints or opportunities during the project development process. Summaries reflect available environmental information. **Appendix B** provides additional details about environmental conditions within the study area.

4.1. PHYSICAL ENVIRONMENT

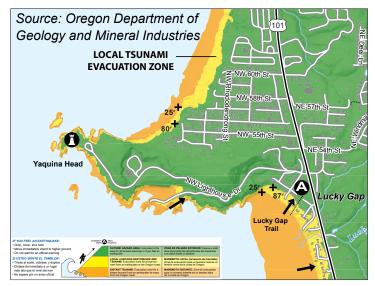

The physical environment includes natural elements such as soil and rock features, water sources, wetlands, floodplain areas, air quality, and human influences such as developed land areas, farmlands, hazardous materials sites, residences, and areas sensitive to noise impacts.

4.1.1. Land Ownership and Land Use

Lands surrounding Yaquina Head ONA are mostly privately held, although some bordering lands are owned by the City of Newport and Lincoln County. BLM owns the nearly 100 acres of Yaquina Head ONA including all roads. The right-of-way for Lighthouse Drive and US 101 is held in public interests. The City of Newport is responsible for Lighthouse Drive from the US 101 intersection extending about 850 feet west and ODOT is responsible for US 101. The small parking lot adjacent to Lighthouse Drive near the US 101 intersection is mostly within private right-ofway while the Ernest Bloch Memorial Wayside parking lot along US 101 south of Lighthouse Drive is within the US 101 right-of-way.

4.1.2. Soil Resources and Prime Farmland

Mapping developed by the US Department of Agriculture Natural Resource Conservation Service show that no prime farmland exists within the Lincoln County Area. About 11 percent of the lands are classified as farmland of statewide importance.

The majority of the Yaquina Head ONA is located outside the hazard zone for a tsunami caused by an earthquake.

4.1.3. Geologic Hazards

The study area lies within the Siletz-Yaquina Watershed and is primarily composed of Quaternary sediments and Miocene volcanic and marine sedimentary rocks.⁶ Coastal erosion and landslides are extensive from Otter Rock southward to Yaquina Head. Large landslides occur on both the north and south sides of Yaquina Head. The majority of Yaquina Head ONA is considered to be at moderate to high risk for landslide occurrence. Additionally, seismic hazards are considered one of the major natural hazards in Oregon, with the strongest earthquake effects generally felt closer to the coastline. Tsunamis and coastal erosion are additional geologic hazards that could potentially affect the study area.7 Due to its elevation, almost the entire ONA is outside the hazard area for a tsunami resulting from an earthquake. However, the Quarry Cove ADA access road is within the hazard area for both a local and distant tsunami.

4.1.4. Surface Waters

The study area lies entirely within the Siletz-Yaquina and Moolack Creek Watersheds. Although no prominent surface water features cross or run parallel to Lighthouse Drive, 3 intermittent unnamed streams cross Lighthouse Drive. These streams, by definition, only hold water during wet portions of the year (October through April).

WATER QUALITY

The Moolack Creek Watershed is rated as impaired for aquatic life. The impairment categories were identified as low oxygen levels in the water and impaired biota, meaning that the biological community within the water body is unhealthy or the population numbers are significantly lower than expected. The Yaquina Head area is also rated as impaired for fish and shellfish consumption.

4.1.5. Groundwater

There are 6 wells within the Yaquina Head ONA: 5 water wells and 1 geotechnical well. One water well is used for industrial purposes and one was used for water monitoring purposes. The intended use of the other wells is unknown.

4.1.6. Wetlands and Waters of the U.S.

National Wetland Inventory[®] mapping for the study area shows primarily estuarine and marine wetlands, freshwater ponds, and various rivers and stream channels. Three unnamed, intermittent riverine features cross Lighthouse Drive at separate locations.

24

4.1.7. Floodplains and Floodways

The entirety of Lighthouse Drive runs adjacent to the coastal floodplain, but the roadway itself lies outside of the floodplain boundary. A small area on the end of Quarry Cove Road lies within the coastal floodplain boundary. The Federal Emergency Management Agency categorizes the headland and inland portion of the study area as Zone X, meaning this is an area of minimal flood hazard. The Pacific Ocean along Quarry Cove and Cobble Beach is subject to flooding by the 1-percent-annual-chance flood event due to high velocity waves that are typically present during storms (Zone VE).

4.1.8. Hazardous Substances

The Yaquina Head Lighthouse is listed as a very small quantity generator in the US Environmental Protection Agency (EPA) Hazardous Waste Site database.

4.1.9. Air Quality

Lincoln County is considered an attainment area for all pollutants, and therefore proposed transportation projects would likely not be subject to conformity requirements.

4.1.10. Noise

Residences in the study area are sensitive noise receptors that could be affected by roadway improvements within Yaquina Head ONA. Sites within the study area protected under Section 4(f) of the *U.S. Department of Transportation Act* and Section 6(f) of the *Land and Water Conservation Fund Act* may also be considered sensitive noise receptors.

Construction activities associated with improvements resulting in substantial roadway changes within Yaquina Head ONA may result in localized and temporary noise impacts in the vicinity of residences. These impacts can be minimized by incorporating measures to control noise sources during construction.

4.2. **BIOLOGICAL RESOURCES**

The biological environment includes plants and animals known or likely to occur in the study area, including sensitive species protected by state and federal regulations.

4.2.1. Vegetation

Several vegetation types occur within the Yaquina Head ONA study area, including mixed hardwood and coniferous forest, coastal spruce, and western hemlock forest. The majority of Yaquina Head ONA is classified as conifer, developed, or non-vegetated.

Invasive weeds are a growing concern in Lincoln County. Nine species of noxious weeds are known to occur within the study area. All are designated as 'List B' by the State of Oregon, meaning they are regionally abundant but may have limited distribution in some counties. Intensive control measures for these weeds are conducted at the state, county, or regional level and are determined on a case-by-case basis. The known noxious weeds within the study area are knotweed, herb Robert, ivy, giant knotweed, Armenian blackberry, field bindweed, bull thistle, Canada thistle, and St. Johnswort.

4.2.2. Fish and Wildlife

Bird observation is a common activity at Yaquina Head ONA. During the breeding season, typically from May to August, seabird breeding colonies can be observed within close range of Yaquina Head ONA facilities. According to the US Fish and Wildlife Service (USFWS), 5 species of seabird and 1 shorebird species breed on the coast at Yaquina Head ONA. Two varieties of cormorants can be observed: Brandt's and Pelagic. The Brandt's cormorants in the area typically nest on the rock tops along the coast, and the Pelagic cormorants nest among the cliff faces. Pigeon guillemots and western gulls are also observed along the cliff ledges. Black osytercatchers frequent the tides in search of food. The common murre, an abundant seabird in Oregon, is often observed on the nearshore sea stacks. Other birds that frequent or pass through Yaquina Head ONA include brown pelicans, bald eagles, harlequin ducks, surfbirds, and black turnstones.

Bird and wildlife viewing is a popular activity at Yaquina Head ONA.

Other wildlife that are commonly observed in the area are gray whales and harbor seals. Gray whales pass by Yaquina Head ONA just off the coast, and harbor seals can be observed with their young resting on the coastal rocks, which are managed by the USFWS as part of the Oregon Islands National Wildlife Refuge. They provide sanctuary for the harbor seals and seabirds and are closed to public access year-round.

4.2.3. Threatened and Endangered Species

There are 9 species federally listed as threatened or endangered that are known or believed to either reside within the study area or have the potential to be indirectly affected by project activities within the study area. The species include the pacific marten, marbled murrelet, northern spotted owl, western snowy plover, short-tailed albatross, leatherback sea turtle, loggerhead sea turtle, olive ridley sea turtle, and the Oregon silverspot butterfly. Species often move and habitats change, therefore the noted species are not guaranteed to be found within or near the study area at the time of a future project.

4.2.4. Other Species of Concern

Species of concern are native animals or plants that are at risk to declining population trends, threats to their habitats, and restricted distribution, among other factors. The red tree vole, a small rodent that inhabits treetops, is native to coniferous forests west of the crest of the Cascade Mountains in Oregon and northwestern California and generally are found at lower elevations. Within Oregon, the north coast area, which does not include Lincoln County, is the primary focus of species preservation and habitat management efforts. Given that they are primarily a treedwelling species, they are very vulnerable to activities such as development, recreation, and road construction, that could potentially cause tree reduction or disturbance.⁹

4.3. SOCIAL AND CULTURAL RESOURCES

The study evaluated the social and cultural environment within the study area, including characteristics of the human population, living and working conditions, recreation uses, culturally important sites, and visual character. These elements reflect human experiences and values.

The Yaquina Head ONA may be habitat for the endangered Oregon silverspot butterfly. Impacts to their habitat should be avoided or otherwise mitigated with any potential improvements.

4.3.1. Demographic Conditions

The City of Newport is slightly more diverse, racially and ethnically, than both Lincoln County and the state of Oregon. Persons identifying as White make up approximately 71 percent of the population in Newport, 83 percent of the population in Lincoln County, and 76 percent of the population in Oregon. The percentage of the population identifying as Hispanic or Latino is greater in Newport (20 percent) compared to Lincoln County (9 percent) and Oregon (13 percent). Persons identifying as Black or African American make up nearly 2 percent of the population in Oregon and Newport compared to 0.6 percent in Lincoln County. The percent of the statewide population identifying as Asian is about 4 percent in Oregon and approximately 2 percent and 1 percent in Newport and Lincoln County, respectively. For all other races, the city, county, and state have comparable population distributions.

ENVIRONMENTAL JUSTICE

To better meet responsibilities related to the protection of public health and the environment, the EPA has developed an environmental justice mapping and screening tool called EJSCREEN based on nationally consistent data and an approach that combines environmental and demographic indicators in maps and reports. While the EJSCREEN report (**Appendix B**) indicates that most environmental and demographic indicator values for Yaquina Head ONA are below comparable values for the State of Oregon, EPA Region, and the nation, minority and/or low-income populations are present in the area.

4.3.2. Economic Characteristics

Median household incomes in Newport and Lincoln County are both below the state median values. The median income in Newport is approximately 22 percent lower than that of the statewide median, while that in Lincoln County is 24 percent lower than the statewide median. The poverty rates in Newport and Lincoln County are both above that of the overall poverty rate in Oregon. The statewide unemployment rate is also less than that of the city and county rates.

In 2019, the City of Newport employed approximately 4,467 people. The largest employing industry in the city was accommodation and food services (18 percent). Retail trade employed 13 percent and health care and social assistance employed 11 percent of the population in Newport. The highest paying industries were utilities (\$103,750), professional, scientific, and technical services (\$53,750), and public administration (\$52,708).

Historically, the tourism industry has thrived in Newport. Newport boasts a plenitude of tourist attractions including museums and city parks. Recreational opportunities are also in abundance including fishing, boating, biking, and various other activities. The national and state parks and historical sites in the area also continue to attract tourists.

4.3.3. Cultural and Historic Resources

The Yaquina Head Lighthouse is classified as being of natural historic significance, and it is denoted with a Lincoln County Historical Society marker. The site is also listed on the National Register of Historic Places (NRHP). The NRHP is an official list of historic places in the US that have been deemed worthy of preservation. Qualified historic locations may receive preservation assistance and incentives. According to the Tribal Directory Assessment Tool, three tribes with potential interest in Lincoln County include the Confederated Tribes of Siletz Indians of Oregon, Confederated Tribes of the Grand Ronde Community of Oregon, and the Confederated Tribes of the Warm Springs Reservation of Oregon.

4.3.4. Section 4(f) Resources

Section 4(f) of the U.S. Department of Transportation Act protects publicly owned public parks, recreation areas, wildlife/waterfowl refuges, and historic sites of national, state, or local significance on public or private land that are potentially eligible for listing or are listed on the NRHP. The Yaquina Head Lighthouse is listed on the NRHP and impacts to the study area should be investigated and appropriately considered in accordance with Section 4(f) if improvement options are forwarded from this study.

4.3.5. Section 6(f) Resources

Section 6(f) protection applies to public recreational sites purchased or improved with *Land and Water Conservation Fund Act* funds. It does not appear that any projects funded under Section 6(f) of the are within the vicinity of the study area.

4.3.6. Visual Resources

The study area boasts a high level of scenic quality. Protruding approximately a mile into the Pacific Ocean, Yaquina Head ONA is comprised of lush vegetation, sandy beaches, and a dark basalt coast. The rocky areas of Cobble Beach provide excellent tidepool viewing opportunities. The *City of Newport Comprehensive Plan* expanded the Ocean Shorelands Boundary in 1991 to include Yaquina Head as a major visual resource of the Newport area due to the seaward exposure of the headland.

The Yaquina Head Lighthouse is listed on the NRHP and is subject to protections under Section 4(f).

Chapter 5: Goals, Objectives, and Other Considerations

Goals, objectives, and other considerations were identified based on a comprehensive review of existing information and input from the study team, stakeholders, and the public. A summary of the identified needs and concerns, limiting constraints, and other considerations that helped guide development of the goals and objectives is shown in **Figure 7**.

Goals and objectives are important in explaining why a potential improvement option may be necessary, whereas other considerations serve as constraints that may limit potential improvements. The following statements reflect the existing social, environmental, and engineering conditions and recognize the local and regional use of Lighthouse Drive and the adjoining transportation system.

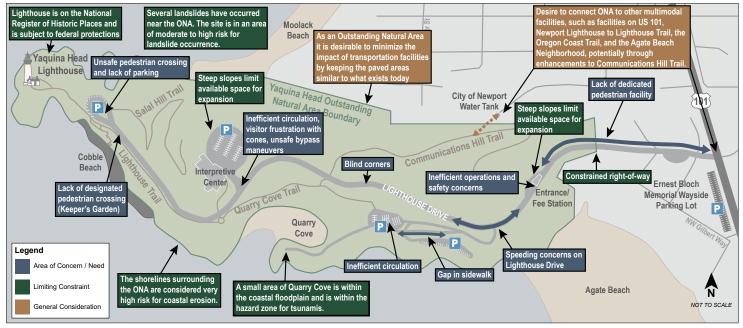

FIGURE 7: KEY FINDINGS SUMMARY

30

Goal 1: Improve operation of the roadway corridor, entrance station, and parking lots.

Yaquina Head ONA receives approximately 500,000 visitors each year. The number of visitors to the site is expected to continue growing due to increased recreational interest and opportunities. Consequently, Lighthouse Drive and other site transportation facilities are projected to experience increased traffic volumes. As the number of visitors continues to increase, it will be important to provide a transportation system that can efficiently accommodate increasing traffic volumes for many years to come.

Field observation and personal accounts from BLM staff and Yaquina Head ONA visitors indicate a need to improve the overall operability of the transportation system to accommodate visitor demand. With the current configuration of the entrance gate, vehicles often back up while waiting in the entrance line, occasionally extending all the way to US 101, causing visitor delay and frustration. Visitors and staff have also indicated a need for improved vehicle circulation throughout the site, especially in the Quarry Cove, Interpretive Center, and Lighthouse parking lots. Additional ADA and RV parking is also desirable.

OBJECTIVES:

- Reconfigure the entrance station to improve efficiency.
- Reconfigure parking lots to improve circulation and provide adequate ADA and RV parking opportunities.

Goal 2: Improve the safety of the transportation system for all roadway users.

Lighthouse Drive lacks dedicated non-motorized facilities between the US 101 intersection and the Interpretive Center, increasing the potential for vehicle-pedestrian conflicts on the roadway, especially on blind corners with limited sight distance. Additionally, non-motorists have indicated that the travel speeds of vehicles within the site contribute to poor safety and feelings of discomfort.

OBJECTIVES:

- Reduce potential for vehicle/non-motorist conflicts.
- Construct facilities that lower vehicle speeds.

Goal 3: Provide multimodal transportation facilities that connect to destinations within the site and to the regional transportation system.

Visitors, stakeholders, and staff have expressed a desire for improved multimodal transportation connections to destinations and recreational opportunities within the site, as well as to the larger regional transportation system. In addition to attractions within the Yaquina Head ONA, other prominent recreational trails in the vicinity of the ONA include the OCT, Lighthouse to Lighthouse Trail, and Oregon Coast Bike Route. Providing improved connectivity for pedestrians, bicycles, and vehicles between these attractions and the ONA will improve accessibility to the site and potentially increase visitation. Improving connectivity to the existing public transportation system in Newport, Lincoln County, and the broader state of Oregon, is also important to ensure equitable access to the site and offer mode choice.

OBJECTIVES:

- Facilitate multimodal transportation access to recreational opportunities within the Yaquina Head ONA and the broader region.
- Provide multimodal facilities consistent with local planning efforts and recreational needs.
- Integrate with regional public transportation travel options.

32

Goal 4: Extend the useful life of transportation facilities.

To keep the site's transportation facilities operating safely and efficiently for visitors, various upgrades, repairs, or maintenance activities may be necessary. If facilities are insufficiently maintained, roads can quickly deteriorate, impacting visitor travel and requiring costly repairs or replacements. Although ongoing maintenance is performed by BLM staff, the existing pavement on Lighthouse Drive is over 20 years old and is beginning to exhibit deteriorating condition in a number of locations, and a section of the Quarry Cove access road has continually experienced sloughing issues, despite repairs.

OBJECTIVES:

• Conduct appropriate preventive maintenance activities to extend the life of existing facilities.

Cher Considerations

Yaquina Head ONA is a protected area designated by Congress to provide for the conservation and development of the scenic, natural, and historic values of the area; the continued use of the area for education, scientific study, and public recreation; and protection of the wildlife habitat of the area. The Yaquina Head Lighthouse, holds historical value and is a popular tourist destination. When proposing potential improvements to the ONA, potential impacts to the environment, cultural, scenic, and recreational aspects of the site and surrounding areas should be considered. Any adverse impacts should be avoided, minimized, or otherwise mitigated with positive impacts elsewhere within the site.

To preserve the ONA, it is important to BLM, stakeholders, and visitors to minimize the amount of new pavement and impermeable surfaces required for improvements and provide additional vegetation wherever feasible. Likewise, it is important to minimize temporary impacts from construction and be mindful of any barriers to construction feasibility due to geotechnical and other environmental constraints. New facilities should fit within existing right-of-way to minimize costs and impacts. To determine if facilities are financially feasible, the cost of construction and routine maintenance should be considered and eligibility for potential funding sources should be reviewed. Beyond the ONA boundary, it is important to ensure projects align with any ongoing and future local and regional planning efforts such as the Newport TSP and *Greater Newport Area Vision 2040*.

The following constraints and other factors should be taken into consideration when identifying potential improvement projects within the Yaquina Head ONA.

- Context, function, and use of the ONA
- Impacts to environmental resources
- Temporary construction impacts
- Construction feasibility and physical constraints
- Maintenance cost and responsibility
- Alignment with local and regional planning efforts
- Existing right-of-way
- Funding availability

Chapter 6: Improvement Options

Several concerns were identified that could be potentially mitigated through implementation of sitewide multimodal management strategies and site-specific improvements as summarized in the following sections.

6.1. SITEWIDE IMPROVEMENT STRATEGIES

Several concerns were identified that could be potentially mitigated through traffic calming, wayfinding, improved accommodations for pedestrians, bicyclists, and transit riders, and implementation of other sitewide strategies. Beneficial strategies that could be feasible to implement in the Yaquina Head ONA are described in the following sections. Varying levels of additional staffing may be required to implement the proposed strategies. If pursued, a determination of staffing availability and additional needs will be made by BLM prior to implementation. A summary of the proposed strategies is provided in **Table 3**.

6.1.1. Traffic Calming Strategies

Traffic calming has been shown to increase the quality of roadway user experience, particularly for nonmotorized users. Traffic calming methods, depending on the technique, can be used to reduce vehicle speeds or volumes. Most of the roadways within the Yaquina Head ONA are signed at 25 mph, except the Quarry Cove access road in both directions and Lighthouse Drive in the eastbound direction near the Keeper's Garden, which are signed at 15 mph. Vehicles have been observed to travel above the posted speed limits at the site. Given the high presence of pedestrians on and adjacent to the roadway, especially along Lighthouse Drive, there is an increased potential for conflict between pedestrians and vehicles.

Implementation of traffic calming measures would be beneficial in helping to reduce vehicle speeds and increase the safety for non-motorized users. Several potential traffic calming techniques have been identified for possible implementation on roadways within Yaquina Head ONA. A summary of the advantages, disadvantages, and other considerations for each strategy is in the following sections.

Slower speeds are desired to protect non-motorized users on site.

LOWER POSTED SPEED LIMIT

The *Manual on Uniform Traffic Control Devices*¹⁰ (MUTCD) generally recommends that the posted speed limit should be within 5 mph of the 85th percentile speed of free-flowing traffic, which is the speed that 85 percent of vehicles travel at or below. The 85th percentile speed is typically considered to be the speed at which drivers are comfortable driving on a road and is a good indicator of a reasonable speed limit. However, the MUTCD also specifies other characteristics that may be considered, such as roadside development, parking presence, and pedestrian activity.

While the MUTCD does not provide guidance on how to incorporate these factors into the process of setting a speed limit, the *Methods and Practices for Setting Speed Limits*¹¹ prepared by FHWA and the Institute of Transportation Engineers describes several methods for altering speed limits. One method, referred to as the engineering approach, entails first determining a speed within 5 mph of the 85th percentile speed and then adjusting it accordingly after reviewing the roadside environment and characteristics.

Based on speed data collected at multiple locations within the ONA in August 2021, the 85th percentile speeds were all generally below or within 5 mph of the posted 25 mph speed limits. Recorded 85th percentile speeds ranged from 19.3 mph (Lighthouse Drive west of the entrance) to 30.3 (Lighthouse Drive between Quarry Cove and the Interpretive Center). Most of the speeding vehicles were observed in the 15 mph zones. Approximately 4.3 percent of vehicles were speeding within the combined 25 mph zones, while 32.8 percent of vehicles were speeding within the combined 15 mph zones.

Given the high pedestrian activity on Lighthouse Drive and the roadway context within the ONA, engineering judgment

may be used to lower the posted speed limit below the 85th percentile speed. A sitewide speed limit of 15 mph may be appropriate to lower travel speeds and reduce confusion over changing speed limits at the site. It is however important to note that lowering the speed limit does not guarantee that vehicles will travel at the posted speed limit since the 85th percentile speed is generally a representation of typical driver behavior. Additionally, enforcement is needed to ensure vehicles travel at the posted speed.

A sitewide speed limit of 15 mph may be desirable at Yaquina Head ONA.

YAQUINA HEAD TRAFFIC STUDY OR BLM NWO 1516291(1)

SPEED FEEDBACK SIGNS

Dynamic speed feedback sign systems are traffic control devices that are programmed to provide a message to drivers exceeding a certain speed threshold. These systems are typically installed in conjunction with a speed limit sign and usually include a speed-measuring device such as a loop detector or radar to measure vehicle speeds. When vehicles exceed a predetermined speed threshold, the feedback signs display messages such as "YOUR SPEED XX MPH," "SLOW DOWN," or similar messaging to alert drivers traveling above the posted speed limit.

When appropriately complemented with enforcement, speed feedback signs can be an effective method for reducing speeds at a desired location. Without enforcement, drivers who pass the sign regularly may become accustomed to its presence and may begin to disregard its messages. This may not be a substantial concern at Yaquina Head, since the site attracts more irregular visitors than frequent users.

WARNING SIGNS

The MUTCD provides guidance for additional warning signs that may be effective in reducing vehicle speeds. Warning signs such a pedestrian warning sign (W11-2) or a share the road (W16-1P) plaque may alert drivers to the potential for pedestrians and bicyclists on or near the roadway and may result in slower vehicular travel speeds. MUTCD guidance for the installation of signs of this type recommends using engineering judgment to determine the need for additional warning signs on the roadway. At the ONA, pedestrian warning signs are already used near pedestrian crossings. If bicycle use increases, share the road signage may be useful. However, signs should be used sparingly to avoid causing information overload for users and/or detract from the natural setting of the ONA.

SPEED BUMPS, HUMPS, AND TABLES

Speed bumps, humps, and tables are vertical obstacles commonly used in traffic management to reduce vehicle travel speeds. All 3 devices are vertical structures in the road that jolt the occupants of a vehicle moving too quickly over them. They can be made from asphalt, concrete, plastic, rubber, or metal.

Speed bumps are the most aggressive traffic calming device and are most useful in parking lots and driveways. A speed bump generally slows traffic to 2–10 mph, giving both people and cars time to react safely to one another. Speed bumps are rarely used on public roadways because they require vehicles to slow to a near stop to pass over them and can cause damage to cars moving at posted speeds. Speed bumps are typically 2 to 4 inches high and between 6 inches to 2 feet long measured in the direction of vehicular travel.

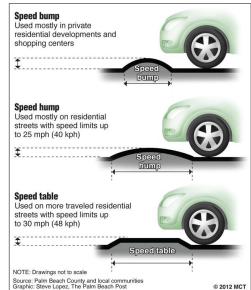

Speed humps are raised areas of pavement that are often installed across low-volume, low-speed roadways to slow traffic speeds. Speed humps are typically 3 to 4 inches in height and 12 to 14 feet in length. Speed humps can reduce travel speeds to 15 to 20 mph. Speed humps are most often placed in a series to maintain speed reduction through a long corridor.

Speed feedback signs display a message when drivers are exceeding the posted speed limit.

Pedestrian warning signs are already used at some locations on site.

Speed bumps, humps, and tables vary in width and height and serve different transportation purposes.

Speed tables are midblock traffic calming devices that raise the entire wheelbase of a vehicle to reduce its traffic speed. Speed tables are longer than speed humps and have a flat top, typically with a height of 3 to 3.5 inches and a length of 22 feet. Where a speed table coincides with a pedestrian crossing, it should be designed as a raised crosswalk. Speed tables are often designed using pavement markings, colored pavers, or other distinctive materials to help make the speed table visible for all roadway users.

On roadways within the Yaquina Head ONA, speed humps or speed tables installed at pedestrian crossings would be the most appropriate tool for reducing vehicle speeds. While these devices have mostly positive impacts and are typically successful in reducing average vehicle speeds, they may impact the ease of emergency-vehicle travel on the roadways where they are installed. As a result, speed humps are not recommended for installation on major roadways or emergency routes. This is particularly troublesome at the ONA since Lighthouse Drive is the only ingress and egress route for the site. Additionally, since speed humps interrupt the free flow of traffic, they may be frustrating to visitors and staff and prompt a negative response from their implementation.

Providing gaps in speed management devices can help with emergency vehicle access.

NARROW TRAVEL LANES

36

Travel lanes are striped to define the intended travel path for vehicles within a corridor. Historically, wider travel lanes (11 to 13 feet) have been used to provide a more forgiving buffer to drivers, especially in high-speed environments. Conversely, narrower lanes may feel more uncomfortable to drivers, naturally encouraging them to slow down to navigate the roadway. In addition to managing speeds, narrower lanes also reduce exposure and crossing distances for pedestrians at crossings. The travel lanes at the Yaquina Head ONA vary but are generally 11 feet in width. Generally, travel lane widths of 10 feet are considered appropriate to provide adequate vehicle safety while still discouraging speeding. However, additional width may be necessary for routes carrying high volumes of heavy trucks or buses and at locations with tight curves. Narrowed lane widths can easily be achieved by restriping the existing pavement for minimal cost. The space gained could then be used to accommodate nonmotorized users such as a pedestrian pathway or bike lanes.

LATERAL SHIFTS AND CHICANES

A lateral shift is a realignment of an otherwise straight roadway that causes travel lanes to shift direction in an effort to reduce vehicle speeds. Typically, lateral shifts separate opposing traffic with the aid of a raised median. Without the median, a motorist could easily cross the centerline in order to drive the straightest path possible or veer into the path of opposing traffic, reducing the effectiveness of the device.

A chicane is a series of alternating curves or lane shifts that are positioned in a way that forces motorists to steer back and forth out of a straight travel path. The curvilinear path is intended to reduce the speed at which a motorist is comfortable traveling through the feature.

Lateral shifts can be applied on roadways with all levels of traffic volumes, while chicanes are most appropriate on low-volume roads. Both devices are most effective on roadways with speed limits of 35 mph or lower. Both devices can be used along a primary emergency vehicle route, provided traffic volumes are low enough to allow an emergency vehicle to straddle the roadway centerline and where medians are designed to be easily mounted or straddled by emergency vehicles if needed.

Lateral shifts [left] and chicanes [right] help reduce vehicle travel speeds by forcing motorists to steer in non-linear paths. Chicanes are typically more effective at reducing speeds, but lateral shifts are typically more efficient for emergency vehicles.

Both lateral shifts and chicanes can slow traffic by encouraging drivers to moderate their speed using horizontal deflection. However, the effectiveness of the devices is dependent on the length of the alignment shift, as well as the volume and distribution of traffic. The devices are less effective in situations where traffic volumes are significantly higher in one direction than the other, or where volumes are so low that the likelihood of encountering an opposing vehicle within the lateral shift/ chicane zone is low. Chicanes typically achieve a greater speed reduction than lateral shifts.

6.1.2. Pedestrian Accommodation Strategies

Multiple pedestrian opportunities are provided at Yaquina Head ONA and in the surrounding area. Visitors entering the site on foot do not have to pay entrance fees. Once inside the ONA, several pedestrian trails ranging in difficulty and surface type are provided. A common concern at the Yaquina Head ONA is the lack of a continuous, dedicated facility for pedestrians on Lighthouse Drive between US 101 and the lighthouse. As a result, visitors entering the ONA on foot often walk on the roadway, and near-miss conflicts between vehicles and pedestrians have been observed, especially in areas with limited sight lines. Pedestrians using Lighthouse Drive consist primarily of local residents, OCT users, and visitors who park at Ernest Block Memorial Wayside and walk to the site to avoid paying vehicle entrance fees.

Another challenge is the general lack of connectivity between multimodal facilities surrounding the ONA, such as the Lucky Gap Trail providing access to Agate Beach, a small trail off NW Gilbert Way providing access to Ernest Bloch Memorial Wayside, and the Oregon Coast Bike Route on Oceanview Drive. The TSP outlines several locations in Newport that are in critical need of improvements to pedestrian facilities including the Yaquina Bay area, the OCT, and crossings on US 101. There is a need to address existing gaps in pedestrian facilities, poor connections, vehicle speeds, and safety issues in order to complete the pedestrian system and help make walking a more attractive and efficient travel option in the area. Specific recommendations for pedestrian and bicycle facilities were identified in the TSP and the projects occurring near the Yaquina Head ONA are provided in Table 3. Completing these important connections would help expand transportation and recreational opportunities in the area, fill a gap in the existing OCT, and enhance connectivity between Yaquina Head ONA and Yaquina Bay. Currently, the OCT terminates at the beach just north of Yaguina Head ONA and begins again on Agate Beach.

| ID | Location | Description |
|------|---|---|
| TR2 | US 101 (North) NW Oceanview Dr to North UGB | Construct a shared use path (SUP) on the east side of US 101. Sidewalk infill will also be completed on the west side south of NW 60th Street. SUP project should be consistent with previous planning efforts (e.g., Agate Beach Historic Bicycle/Pedestrian Path, Lighthouse to Lighthouse Path). |
| TR3 | US 101 NW Lighthouse Dr to NW Oceanview Dr | Construct a SUP on the west side of US 101, with sidewalk infill on the east side. SUP project should be consistent with previous planning efforts (e.g., Agate Beach Historic Bicycle/Pedestrian Path, Lighthouse to Lighthouse Path). |
| TR5 | NW Lighthouse Drive US 101 to End | Construct a SUP on one side only and other improvements as identified by the BLM/FHWA. Note: pedestrian/bicycle crossing improvements may be needed at the intersection of US 101/NW Lighthouse Drive. |
| TR7 | New Connection NW Biggs Drive to Yaquina Head ONA | Construct new SUP connection, which will likely occur where existing easement provides access to a City water storage facility known as the Smith Tank. |
| TR8 | NW Lighthouse Drive US 101 to terminus | Construct a SUP on one side and other improvements as identified by BLM/FHWA. |
| CR3 | NW 55th Street/US 101 | Install an enhanced pedestrian and bike crossing to connect to the SUP on the east side of US 101 |
| BR16 | NW 55th Street NW Glady St to NW Piney St | Install signing and striping as needed to designate a bike route. |
| SW24 | NW 55th Street NW Glady St to NW Piney St | Complete existing sidewalk gaps. |

TABLE 3: RECOMMENDED PROJECTS FOR AGATE BEACH AREA (NEWPORT TSP)

Source: City of Newport, Draft Transportation System Plan, February 2022; personal communication from City of Newport Community Development Director, June 2022.

Between the Interpretive Center and the lighthouse, a separated pedestrian path is located on the south side of Lighthouse Drive. The path width varies in some sections but the usable walking surface is generally 8 feet wide with a guardrail barrier separating the path from the roadway. BLM, the City of Newport, and ODOT would like to provide a continuous separated pedestrian facility between US 101 and the lighthouse, similar to the path that exists today. The path would parallel Lighthouse Drive along its entire length, with additional connections between existing trails to provide a continuous and connected route. Coordination with the City of Newport will be required to complete the path between US 101 and the Yaquina Head ONA boundary.

SHARED USE PATH DEVELOPMENT

One of the primary considerations for developing a separated pedestrian facility will be to determine which side of Lighthouse Drive the path should follow, either the north side or the south side. Due to space constraints, it will be difficult to accommodate a path on both sides of the roadway in most locations. A summary of the constraints and other factors that should be considered when designing and developing the path is provided in **Figure 8**.

There are many factors that may determine which side of the roadway is most appropriate, including available space for roadway widening, existing utilities, connections to other pedestrian facilities and attractions, desirable views from the path, and geotechnical hazards. In some locations, the existing roadway width may be sufficient to accommodate a path with only minor modifications. However, in other locations, significant excavation and installation of retaining structures may be required. Additionally, there may be locations where it may not be feasible or costeffective to construct an 8-foot-wide path with a barrier as recommended. These constrained locations are shown in **Figure 8**. The most appropriate design of the path, including width, location, and separation type would need to be determined during future design phases.

Without more detailed investigation and design, the cost difference between placing the path on the north versus south side of Lighthouse Drive is unknown. However, construction of a paved 8-foot wide path along Lighthouse Drive from the BLM property boundary to the Interpretive Center is estimated to cost approximately \$600,000. A separated path from the US 101 intersection to the BLM property boundary would be under the jurisdiction of the City of Newport and would be funded separately.

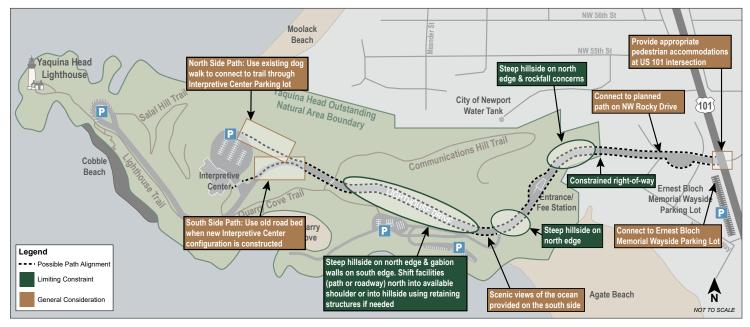

FIGURE 8: SHARED USE PATH CONSTRAINTS AND OTHER CONSIDERATIONS

NORTH SIDE OF LIGHTHOUSE DRIVE

Placing the separated pedestrian path on the north side of Lighthouse Drive is generally more feasible in the segment between US 101 and the Yaquina Head entrance station. More space is available for the path without having to considerably shift the roadway alignment. West of the entrance station, the roadway would have to be realigned or the path would have to shift to the south side of the Lighthouse Drive due to a pinch point created by steep side slopes and rocky cliffs. Keeping the path on the north side of the roadway around the perimeter of the entrance station may be a user safety concern due to a history of landslides and rockfall events occurring on the slopes surrounding the north side of the entrance station.

West of the entrance station above the Quarry Cove parking lot, a steep hillside is located on the north side of Lighthouse Drive and a steep drop off is supported by gabion walls on the south side. In this segment, approximately 8 feet of useable shoulder could be reclaimed for a path. Limited space is available for roadway expansion. If expansion is necessary to accommodate the path, the facilities would have to shift into the northern hillside to avoid impacts to the gabion on the south side. Additional retaining structures may be required to maintain structural stability of the hillside.

The path is generally feasible to construct on the north side of Lighthouse Drive for the remainder of the segment to the Interpretive Center, although the alignment may vary based on the improvement option selected for the Interpretive Center parking lot. At the Interpretive Center, the path would shift to its existing location on the south side of the roadway using the pedestrian tunnel under Lighthouse Drive at the Interpretive Center.

A path located on the north side of Lighthouse Drive would lend itself well to complete connections to Communications Hill Trail and to the proposed path on NW Rocky Way from the Newport TSP. However, a crossing at or near the US 101 intersection would be required to facilitate a connection for the Oregon Coast Trail and to other existing and proposed trails leading south of the study area.

SOUTH SIDE OF LIGHTHOUSE DRIVE

Placing the pedestrian path on the south side of Lighthouse Drive would be more technically challenging in the segment between US 101 and the entrance station due to space limitations. The alignment of Lighthouse Drive would likely have to shift to accommodate the path, however, if a second entry lane is added to the entrance station, this realignment would occur anyway. The path would likely be feasible to construct on the south side of Lighthouse Drive for the remaining segment between the entrance station and the Interpretive Center, with the road being shifted north into the hillside in some locations, as discussed previously.

Crossings would occur at the entrance to the host site and at Quarry Cove. The south side alignment would provide direct connections to the Ernest Bloch Memorial Wayside parking lot, Quarry Cove, and existing trails on the south side of Lighthouse Drive without requiring pedestrians to cross the roadway. Additionally, the ocean is on the south side of Lighthouse Drive, so the views from the path would be less obstructed if the path were to be constructed on the south edge of the roadway.

It is envisioned that a shared use path on Lighthouse Drive would be constructed similarly to the existing Lighthouse Trail with a barrier separating pedestrians from vehicle traffic.

SEPARATION TYPES

The existing Lighthouse Trail is separated from Lighthouse Drive using guardrail. This type of barrier provides physical separation between pedestrians and vehicles, thereby increasing safety and providing a comfortable walking environment. However, it takes up a significant amount of space that could potentially be used to provide a wider pedestrian path. Several other types of separation could be considered instead that can provide an even greater degree of protection, minimize maintenance needs, or maximize the amount of available space for pedestrians.

40

Guardrail: This is the existing barrier in use to separate the pathway. It consists of wood posts mounted in the roadbed with steel sheeting attached to the front of the posts. Installed, guardrail is approximately 1 foot wide and 2 feet tall. The steel sheeting is susceptible to rusting due to environmental elements. Guardrail is typically installed along roadways where hazards exist to protect vehicles. When used as a pedestrian barrier, guardrail provides a significant degree of protection between users.

Cable Rail: This type of barrier is already in use at the site, primarily as a barrier between walkways and protected natural areas. The cable rails at Yaquina Head consist of steel posts connected by tension cables. Shapes and sizes of cable rail varies, however, the cable rails already used onsite are approximately 4 feet tall and 2 inches wide. The steel used for the posts and cables can be susceptible to rusting. Depending on the materials used, installation method, and intended use, cable rails may not be designed to withstand impact from vehicles during a crash. Proper deflection distances behind the rails would be necessary.

Bollards: Bollards are vertical posts that are often used to control traffic or prevent vehicles from colliding with pedestrians and structures. Bollards can come in many different shapes, sizes, and materials including metal, stone, concrete, or plastic. They can be permanently mounted in the ground or be temporary and portable, such as the bollards used to guide vehicles into the Interpretive Center during peak hours. Flexible, surface-mounted, plastic bollards are presently used at the entrance station to divide opposing lanes of traffic. Standard bollard sizes range from 3 to 6.5 inches wide and are typically 3 feet tall. Bollards should be spaced about 3 to 5 feet apart to allow for pedestrian and wheelchair access but deter the entrance of a vehicle. Concrete or stone bollards are the most sturdy and may require less maintenance over time.

Jersey Barrier: Jersey barriers can be made of either plastic or concrete and are typically 24 inches wide and 32 inches tall. Concrete jersey barriers provide the maximum amount of pedestrian protection but require the most lateral space. Plastic jersey barriers are filled with water to provide crash protection but can be penetrated by fast moving vehicles. Both types are movable with appropriate equipment. Compared to plastic water-filled barriers, concrete jersey barriers are less susceptible to environmental elements and may require less maintenance over time.

Grade Separation/Curbing: This type of separation consists of installing the pedestrian path at a specified height above the roadway, typically 4 to 6 inches, much like a sidewalk with curb and gutter. Grade separation maximizes the amount of available space for pedestrians because there is no physical barrier that takes up space laterally. However, this configuration provides the least amount of protection in a crash since there is no physical barrier to absorb impact from a crash.

6.1.3. Strategies to Encourage Alternative Transportation

Yaquina Head ONA is most often visited by personal vehicle or by foot. Some visitors also enter the ONA by bus for educational school tours. Few visitors enter by bicycle, and transit options directly to the ONA are limited. The current configuration of the site caters to personal vehicles and offers limited opportunities and accommodations for other modes. In addition to pedestrian treatments discussed in the previous section, several strategies are proposed to encourage the use of alternative transportation modes, such as bicycling, transit, and other environmentally friendly modes. Implementation of these strategies could help alleviate parking capacity concerns, reduce vehicular conflicts, and support BLM's desire to have visitors enjoy the site outside of a vehicle.

REGULAR TRANSIT SERVICE

Lincoln County Transit provides transit services to the Newport area via a city loop and inter-city routes between Lincoln City, Siletz, Yachats, Corvallis, and Albany. The Newport City Loop completes

a full loop through Newport each day. City loop buses are wheelchair accessible and are equipped with bicycle racks. At the time of writing, the closest transit stop to Yaquina Head ONA was Bloch Wayside/52nd Street and was provided by request only.

To encourage increased transit ridership and visitation to the site, BLM could consider coordinating with local transit services to provide regular service to the ONA. Consideration should be given to potential pick up and drop off locations and general logistics if buses intend to travel onsite. Potential undesirable delays could be incurred if buses are required to wait in lines at the entrance station during peak visitation hours. Similarly, it may be undesirable to position a bus stop at Lighthouse Drive/US 101 without having dedicated pedestrian facilities to allow transit riders to safely complete the last leg of the journey to the site.

BLM is planning to prepare an updated business plan for the Yaquina Head ONA, in which the site's fee structure will be assessed and potentially modified. If desired, BLM could consider allowing city buses to pick up and drop off riders on site and allow these visitors to access the site without having to pay entrance fees.

BICYCLE ACCOMMODATIONS

Bicycles are currently only allowed on paved areas of the site and on the Communications Hill Trail. To support increased use of bicycles at the ONA, additional dedicated bicycle facilities could be provided, including bike racks, bike lockers, and shared-lane markings and signage.

Due to its location on the OCT, Yaquina Head is a popular attraction for trail riders. Providing bike racks at key destinations across the site could help encourage riders to park their bikes and tour the site for longer periods of time. Many of these riders are traveling long distances, so they are often carrying cargo on their bikes and may be hesitant to leave their belongings out of sight for long periods of time. For this reason, it may be desirable to provide several bike racks at all destinations (Quarry Cove, Interpretive Center, lighthouse), or provide bike lockers in a convenient location where riders could drop their gear in a locked box for safe storage.

For riders who are less confident riding with traffic, shared-lane markings (or sharrows) and signage on Lighthouse Drive may also be beneficial for promoting ridership. Shared-lane markings help increase awareness of bicyclists in the roadway by indicating a shared roadway environment for bicycles and vehicles. These markings help encourage bicyclists to position themselves safely in lanes too narrow to comfortably fit a vehicle and bicycle traveling side by side. To further alert drivers to the potential presence of bicyclists, MUTCD bicycle warning signs (W11-1) with share the road supplemental plaques (W16-1) could be used.

Bicycle warning signs (top) and sharrows (bottom) can help increase awareness of bicycles in the roadway.

Electric bicycles or electric-assist bicycles, often called e-bikes, are becoming increasingly popular because they can make biking easier or more comfortable for users. The State of Oregon defines e-bikes as a bicycle with 2 or 3 fully functional pedals equipped with a motor that does not exceed 1000 watts and is designed with a maximum speed of 20 mph. E-bikes are considered a bicycle by the Oregon Vehicle Code and are allowed on any roadway, bike lane, or path that is approved for bicycles but are prohibited from sidewalks. In October 2019, the Department of the Interior

(DOI) announced Secretary's Order 3376, *Increasing Recreational Opportunities Through the Use of Electric Bikes*, which will allow the use of low-speed electric bicycles on DOI-managed public lands, such as Yaquina Head ONA, where traditional biking occurs. Supporting the use of e-bikes may help increase bike ridership and decrease reliance on personal vehicles at the site.

BIKE SHARE PROGRAM/ONSITE BIKE RENTALS

Some visitors may want to tour the Yaquina Head ONA by bicycle but, due to travel and other constraints, may not have a bike to ride on site. To accommodate these users and reduce vehicular traffic on site, it may be beneficial to develop a bike share program offering short-term bike rentals. A bike share program typically has a station with a payment kiosk where rentals can be paid for and picked up. Each station has several docks (anywhere from 10 to 100+, depending on local traffic volumes) used to store and lock the bikes, although dockless bike share programs are being used in some cities. The system is automated and does not require daily management. Payment systems vary, but can be based on membership structures, hourly usage, or both. The bikes themselves can be branded with recognizable colors or the logos of sponsors.

At Yaquina Head ONA, the bike share program could be internal to the site, with bikes only being available for pick up/drop off at the ONA. However, consideration could be given to coordinating with the City of Newport to provide other bike share stations across the city to expand biking options and encourage fewer vehicular trips. This may be especially beneficial for promoting the Lighthouse to Lighthouse Trail, Oregon Coast Bike Route, and other bicycle activities and attractions. Usually, users don't have to return a particular bike to a specific station. However, this requires program employees to move bikes between stations by truck or trailer to maintain an even distribution of bikes across the system.

A bike share program could help expand bike ridership on site and across Newport if coordinated with the city.

Bike-share programs, particularly those run by municipalities or nonprofits, may not be entirely userfunded. Some programs tap private individuals or local companies to become station sponsors responsible for maintenance, upkeep, and repairs. Programs might also receive grants from local transportation authorities, municipal governments, or private companies.

ONSITE SHUTTLE BUS

The prospect of a shuttle bus that transports passengers to different locations within the ONA has been proposed in previous conversations with BLM. The concept is intended to reduce vehicular trips at the site, while still allowing passengers to travel by vehicle to primary destinations within the ONA, such as Quarry Cove, the Interpretive Center, and the lighthouse. This would allow visitors to park in the large parking lots at Quarry Cove and/or the Interpretive Center and ride the shuttle to their other destinations. This is beneficial for groups with young children or persons with limited mobility who can't physically walk between destinations. A shuttle system could also help reduce parking needs in constrained locations, such as at the lighthouse.

Several variables should be considered with this scenario. BLM would have to determine whether this service would be provided by BLM staff or an outside company. BLM would also have to consider how the service would be paid for including any user fees associated with the service, the frequency of service, and specific routes.

GUIDED TOUR BUS

As an alternative to an onsite shuttle, BLM could provide a guided tour bus with commentary on the site's history, natural and cultural features, and other important information. If desired, BLM could also coordinate with the Oregon Parks and Recreation Department, Friends of Yaquina Lighthouses, City of Newport, and other organizations/agencies to expand the tour service to

other destinations in Newport or on the Oregon Coast. Considerations for a guided tour bus would be similar to those for the onsite shuttle bus.

A shuttle bus could be used to decrease personal vehicle trips on site. The bus could also offer guided tours at other Oregon Coast destinations.

ELECTRIC VEHICLE ACCOMMODATIONS

Oregon is home to one of the largest and most robust networks of electric vehicle fast charging stations in the US. The West Coast Electric Highway is a network of fast charging stations located every 25-50 miles along I-5, Highway 99, and other major roadways in the Pacific Northwest. Travel Oregon is helping develop itineraries on Oregon's Electric Byways that pass by environmentally friendly businesses and key landmarks across the state. Travel Oregon has also partnered with Forth, a non-profit organization dedicated to expanding equitable access to electric transportation, to offer rebates for tourism-related businesses in Oregon that successfully install charging stations.

BLM could consider providing electric vehicle charging stations at the ONA to help boost tourism, encourage environmentally friendly travel practices, and support the adoption of electric vehicle infrastructure across the state. Providing charging stations at the Interpretive Center may also encourage visitors to park and charge their vehicles while they tour the rest of the site on foot.

Oregon is making great strides in expansion of electric vehicle accommodations across the state. BLM could support this effort by providing a charging station at Yaquina Head ONA while also potentially boosting tourism at the site.

6.1.4. Wayfinding Strategies

Wayfinding refers to information systems that guide people through a physical environment and enhance their understanding and experience of the space. Wayfinding is particularly important in complex and high-stress built environments, such as transportation facilities, and can be developed for both pedestrians and motorists, who each have unique challenges navigating roadway corridors. Comprehensive wayfinding systems often combine signage, maps, symbols, colors, and other communication techniques to help guide visitors to their destinations and reduce confusion. There are 4 types of wayfinding signs: identification, directional, informational, and regulatory. At Yaquina Head ONA, wayfinding is needed to communicate a variety of information including fee requirements and turnaround options in advance of the entrance station, which lane to get in at the entrance station, directions to key destinations within the site, parking availability at the lighthouse, and walking and biking directions. Signs sharing this type of information already exist at the site, but many of these signs are small, temporary placards requiring staff time to set out and pick up each day. Installing larger permanent to visitors. Wayfinding signs also offer an opportunity to provide signage on site that is cohesive and consistent with BLM/Yaquina Head ONA branding and messaging.

Increasingly, wayfinding systems are integrating with mobile applications, digital displays, and other wireless technologies to communicate with broader audiences. These types of systems could be beneficial to install where dynamic information is valuable, such as at the Interpretive Center to indicate parking availability at the lighthouse. Intelligent transportation systems can be used to detect the number of vehicles entering and exiting the lighthouse circle in order to calculate how many parking spaces are available at a given time. This information could be displayed as vehicles approach the Interpretive Center to encourage visitors to park in the Interpretive Center lot and walk down to the lighthouse, reducing the number of circulating trips at the lighthouse. This would be helpful in communicating to visitors why they are directed into the Interpretive Center lot rather than directly to the lighthouse.

BLM uses temporary wayfinding signs (left) for various purposes already; permanent signs with dynamic information displays (right) could help reduce staffing needs.

6.1.5. Pavement Preservation and Maintenance Strategies

Maintenance of transportation facilities accessing Yaquina Head ONA is shared between ODOT, the City of Newport, and BLM. ODOT is responsible for US 101 and Ernest Bloch Memorial Wayside, the City of Newport is responsible for Lighthouse Drive between US 101 and the ONA boundary, and BLM is responsible for all facilities within the ONA boundary. Within the site, the most recent roadway maintenance work, including application of slurry seal, striping, and crack sealing, has been completed by BLM facilities staff. Contracted asphalt work has also been completed in past years. Several roadways within the ONA have experienced continuing pavement failures including transverse and longitudinal cracking and sloughing.

Roadway preservation is a long-term strategy for enhancing functional roadway performance by using integrated, costeffective maintenance practices that extend roadway life, improve safety and motorist satisfaction, and achieve sustainable roadway conditions. The following sections discuss pavement preservation strategies and maintenance practices that could be implemented at Yaquina Head ONA.

<u>OPTIMAL TIMING</u>

Traditionally, federal, state, and local agencies have allowed roadways to deteriorate to "fair" or "poor" condition before steps were implemented to rehabilitate the road. However, recent findings show that this management strategy is both costly and time consuming. Agencies have realized that regularly implementing a series of lowcost preventive maintenance treatments is the most costeffective way to manage and preserve roadways while also avoiding continual rehabilitation. The most effective roadway preservation strategy consists of implementing planned roadway treatments at the optimum time to address minor deficiencies before they become major failures.

Figure 9 illustrates this roadway preservation concept with an emphasis on optimal timing. The example compares 2 paved roadways starting at the same condition. One scenario is managed under the traditional approach of rehabilitating the roadway and allowing it to deteriorate to a state of failure. Failure occurs when the road is in fair to poor condition shown by the rehabilitation trigger line. At this line, irreversible structural damage has occurred, resulting in the need for costly rehabilitation of the entire roadway.

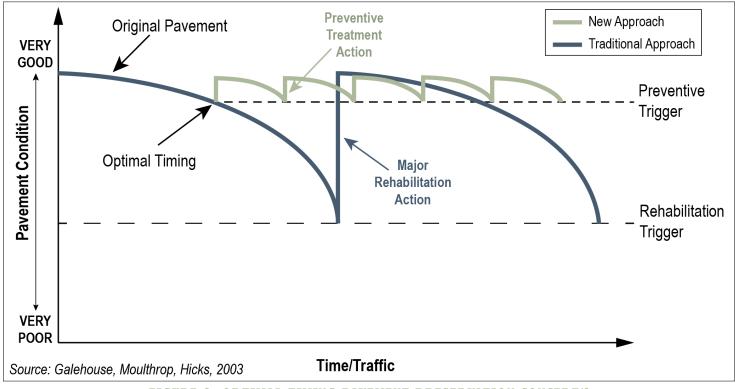

FIGURE 9: OPTIMAL TIMING PAVEMENT PRESERVATION CONCEPT¹²

As shown in **Figure 9**, the new approach scenario implements regular pavement preservation techniques, which are low-cost preventive maintenance treatments implemented when the roadway reaches a predetermined level. The timing of treatment implementation is crucial for the success of the preservation plan. If the treatments are implemented after the optimal time, the roadway will be deteriorating at a rate from which it cannot recover and the investment in maintenance will be wasted. However, if the preventive maintenance is implemented at the optimal time, the roadway will be restored to near original condition, and if routine maintenance continues it will result in much greater intervals between roadway rehabilitations.

PREVENTIVE ASPHALT MAINTENANCE ACTIVITIES

Preventive measures typically include crack sealing, fog seals, chip seals, and/or hot-mix asphalt thin overlays (nonstructural). Each of these treatments are most effective when implemented at the optimal time. The optimal application time for each treatment should be established in accordance with the roadway's condition rating and field verification. The expected life of each treatment is dependent on traffic volumes and environmental conditions; however, non-structural overlays typically last the longest, followed by chip seals and crack seals. Chip sealing is the most commonly used treatment in the Pacific Northwest. Microsurfacing, ultrathin bonded wearing course, cape sealing, and cold in-place recycling are other asphalt pavement preservation treatments that have been used by agencies in the region. However, most of the agencies do not regularly use these treatments based on previous performance, costs, and existing roadway conditions.¹³

BLM typically performs crack sealing treatments to preserve the pavement at Yaquina Head ONA. Several other methods are used across the state with chip sealing being the most commonly used.

DRAINAGE IMPROVEMENTS

Inadequate drainage is a primary factor in pavement failures. Proper drainage is vital to remove water from roads and maintain a healthy roadway network. A proper drainage system includes the traveled way, shoulders, ditches, and culverts. These elements work together to prevent water from penetrating the road surface. The crown and cross slope of the roadway and shoulder help move water to the roadside so ditches and culverts can carry it away. When water stands on the road it can seep into the road base which saturates and weakens the road strata, causing cracking, rutting, and potholes. It is important to closely monitor roadway drainage and fix any problems immediately.

Maintaining vegetation in ditches is also desirable to provide adequate drainage and prevent erosion. Mowing vegetation and cutting brush is necessary to keep water flowing smoothly. Keeping culverts and other drainage structures free of sediment and debris also helps avoiding road deterioration and flooding.

ROUTINE MAINTENANCE ACTIVITIES

In addition to preventive maintenance activities, nonpreventive (or routine) maintenance is also needed to keep the roadway in proper working order. This includes trimming vegetation to maintain driver sight lines, maintenance of road signs and striping, road sweeping and debris removal, litter cleanup, noxious weed control, snow removal, and spot repairs.

EMERGENCY MAINTENANCE ACTIVITIES

Emergency maintenance is typically conducted following an emergency condition such as a landslide or flood event or in response to road failures needing urgent repair. Coastal erosion and landslides are extensive in the area surrounding Yaquina Head. The majority of the ONA is considered to be at moderate to high risk for landslide occurrence. The ONA is also located in a region that is expected to experience very strong to severe shaking in the instance of an earthquake. Landslide and rockfall events have occurred at the site, most recently near the entrance station. The steep rocky cliffs resulting from past guarrying activity at the site and the general geologic composition of the area have made several of the slopes unstable. Landslides, rockfall events, and erosion can cause significant impacts to transportation within the site including blocking travel routes, causing roadway damage, or causing bodily harm to visitors and staff. In the event

In the past, landslides have occurred on this hillside near the entrance station, blocking traffic and staff exit from the fee booth.

of one of these occurrences, immediate debris removal should be conducted and the need for slope stabilization should be investigated. As a precautionary measure, retaining structures, rockfall barriers, and catchments can be installed to prevent substantial damage should an event occur.

Lighthouse Drive runs adjacent to the coastal floodplain, but the roadway itself lies outside of the floodplain boundary. Some areas of the ONA, including part of Quarry Cove Road, lies within the coastal floodplain boundary. Depending on the severity of a flood event, road washouts and other severe damage could occur. However, the primary impact of flooding is saturation of the road surface which can weaken the asphalt, cause deterioration, and make the asphalt more susceptible to damage such as cracks, deformations, and potholes in the long term. Installing proper drainage and repairing surface deformations when they occur can help minimize the impacts of a flood event and prevent severe damage.

6.1.6. Strategies to Accommodate Oversize and Accessible Parking

The Yaquina Head ONA strives to accommodate a range of user abilities and vehicle types as part of its purpose to support education, scientific study, and public recreation. In addition to standard passenger vehicle parking spaces, each designated parking area at the site provides oversized vehicle parking and accessible parking in compliance with applicable regulations. Considerations relating to parking configurations are discussed in the following sections.

ACCESSIBLE PARKING

Government entities must provide accessible parking spaces in parking lots in accordance with the 2010 *Americans with Disabilities Act Standards for Accessible Design*.¹⁴ In addition, facilities that provide goods or services to the public have a continuing obligation to remove barriers to accessibility in existing parking facilities.

The required number of accessible parking spaces must be calculated separately for each parking facility, not calculated based on the total number of parking spaces provided at a site. At least 1 in 6 accessible parking spaces (always at least 1) must be designed to be van accessible. Based on the ADA guidelines, summarized in **Table 2** below, all parking lots at Yaquina Head ONA meet or exceed the minimum requirements for ADA parking spaces. Note, small parking lots of 4 or fewer spaces must have accessible spaces, but those spaces do not need to be signed and anyone, regardless of disability status, can park in the accessible space.

| Total Number of Parking Spaces Provided in Parking Facility | Minimum Number of Accessible Parking Spaces (Car and Van) | Minimum Number of Van- Accessible Parking Spaces (1 in 6 Accessible Spaces) |
|--|---|---|
| 1 to 25 | 1 | 1 |
| 26 to 50 | 2 | 1 |
| 51 to 75 | 3 | 1 |
| 76 to 100 | 4 | 1 |
| 101 to 150 | 5 | 1 |
| 151 to 200 | 6 | 1 |

TABLE 4: MINIMUM REQUIRED ACCESSIBLE PARKING SPACES

Source: 2010 ADA Standards for Accessible Design

ADA-accessible parking stalls are provided in all parking lots at Yaquina Head ONA; an increased number of ADA stalls is desired.

Accessible parking spaces must be located on the shortest accessible travel route to an accessible entrance. Where buildings have multiple accessible entrances, the accessible parking spaces must be dispersed and located closest to the accessible entrances. An accessible route, without curbs or stairs and at least 3 feet wide, must always be provided from the accessible parking to the accessible entrance.

Accessible parking spaces are 8 feet wide while vanaccessible spaces are 11 feet wide. Access aisles provide room for individuals to deploy vehicle-mounted wheelchair lifts and/or unload and use mobility devices such as wheelchairs or walkers. Aisles should be provided on both sides of an accessible space and should be 5 feet wide for both standard and van-accessible spaces. It is permissible for the aisles to be shared between 2 adjacent spaces. Access aisles must be marked (e.g., painted with hatch marks) to discourage parking in them. An alternate design allows a van-accessible space to be 8 feet wide if the adjacent access aisle is also 8 feet wide. Minimum stall lengths are not provided in the 2010 ADA Standards, but BLM guidance suggests a standard length of 20 feet.¹⁵

Accessible parking spaces must also be identified by signs that include the International Symbol of Accessibility. Signs at van-accessible spaces must include the additional phrase "van-accessible." Signs should be mounted so that the lower edge of the sign is at least 5 feet above the ground to ensure visibility by both drivers and local enforcement officials.

ADA Standards do not prohibit front-in only, back-in only, or angled accessible parking spaces. However, where van-accessible spaces are angled, the standards require the access aisle to be located on the passenger side (where vehicle ramps and lifts are typically deployed). Since users pull in or back in depending on which side the access aisle is needed, it is advisable to design both standard and van-accessible spaces so that they can be entered in either direction. Otherwise, consider providing 1 access aisle at each regular accessible space instead of allowing 2 adjacent spaces to share an aisle so that access is available on both sides.

RV PARKING

RV sizes vary considerably but typically range between 20 and 50 feet in length. RV parking spaces are also variable depending on the type and purpose of the parking space. For example, RV parking spaces in campgrounds are often much longer and wider to accommodate the activities that accompany camping, such as picnicking and grilling. RV stalls in RV parks are similar but must be at least 20 feet wide to comply with fire codes. When parking lots provide designated RV parking, stalls are often large enough to accommodate most RV sizes. Most RV parking spaces are a minimum of 20 feet wide and 40 feet long while a standard vehicle parking space is generally 9 feet by 18 feet long. Where designated RV parking is not provided, some RVs will be able to fit in a standard parking space, while larger models will need to take up multiple spaces.

The number of RV parking spaces needed in a parking lot varies based on site and facility needs. There are no requirements or standard guidance available. Input from BLM staff suggests that on the busiest day at the site, 7 to 8 RV stalls are needed in the Interpretive Center parking lot to accommodate demand. There are currently only 3 RV stalls in the Interpretive Center parking lot. On busy days, RVs have been observed parking on the outer edge of the parking lot partially blocking through traffic.

Angled RV parking stalls are provided at lighthouse circle. An irregularly shaped RV/Bus lane is also provided. Both are often occupied by personal vehicles during peak visitation times.

Spaces designed for RVs and trailers are not exempt from accessibility coverage, but the 2010 ADA standards do not include technical provisions specific to these spaces. Accessible RV or trailer spaces may be located among other RV or trailer spaces so long as they are on the shortest accessible route to nearby facility entrances. Access aisles serving accessible spaces must be as long as the vehicle space they serve.

The Architectural Barriers Act Standards¹⁶ apply to facilities designed, built, altered, or leased with federal funds. Yaquina Head ONA is subject to compliance with these standards. The standards include provisions for RV parking and pull-up spaces at outdoor developed areas on federal lands such as camping and picnic facilities. The standards specify that parking spaces and pull-up spaces for recreational vehicles shall be a minimum of 20 feet wide except where 2 adjacent RV parking spaces are provided, when 1 parking space may be a minimum of 16 feet wide.

6.1.7. Management Strategies

Yaquina Head ONA is managed by several BLM staff, including both year-round and seasonal workers, and volunteer site hosts. The staff manage the entrance station, educational tours, the Interpretive Center, and the general park operations. The site hosts provide support to BLM staff and work various shifts at the tidepools, lighthouse, and Interpretive Center or wherever needed. The following strategies are proposed to help manage the site efficiently during day-to-day operations, peak visitation periods, and emergency situations.

ENTRANCE STATION MANAGEMENT

The Yaquina Head entrance station is presently managed by BLM staff. Between 1 to 2 rangers are stationed in the fee booth during park hours to greet visitors, check and issue passes, manage ADA clickers for Quarry Cove, track visitor entry numbers, and collect cash payments. Visitors paying by credit card are directed to an AFM kiosk located just to the west of the main booth. During peak visitation periods, BLM staff conduct "line busting" which involves standing in live traffic between traffic cones and directing pass holders to proceed to the left side of the booth through 1 of the lanes typically used for outbound traffic.

To expedite visitor processing time, a second fee station with a second entry lane is recommended. It is envisioned that 1 or both of the new stations would be equipped with a credit card kiosk and a barrier gate with an automatic arm to allow the second station to operate automatically during peak periods. At the time of writing, BLM staff were unable to collect and process credit card payments without a selfserve AFM. In the future, however, it is expected that BLM staff could either process credit card payments in the fee booth or install an AFM in the entry lane to allow visitors to pay by credit card without having to park and get out of their vehicle at the self-serve kiosk. It is also envisioned that pass holders may be able to scan their pass, with the automated barrier gate immediately allowing entry into the site.

With these modifications, it is expected that processing times would be shortened considerably and standing queues would be much smaller. The addition of a second booth would also provide more space for queues to build without having to extend down the city-owned portion of Lighthouse Drive. Both fee booths could be designed to operate fully automatically, however, it is desirable to BLM to have a booth staffed by at least 1 staff member so they can greet and orient visitors to the site, as this is sometimes the only contact rangers have with visitors. Staff also like to be present to issue ADA clickers and talk with visitors as they leave the site.

The entrance station is also equipped with in-ground loop conductors for traffic monitoring purposes. BLM uses vehicle counts from the loops to track the number of visitors to the site each day. Staff also manually track recreational vehicles versus non-recreational vehicles (BLM staff, delivery vehicles, utility and maintenance vehicles, contractors, and other non-visitor vehicles), pedestrians, bicycles, buses, and pass status. This data is used to track visitation at the site for planning and management purposes. It is desirable to keep some level of automatic visitation data either through loop conductors, radar, video, or other system.

An automated fee booth with attached credit card kiosk and automatic barrier arm could help expedite visitor entry times.

EMERGENCY MANAGEMENT

When improving the site, it is important to consider and address emergency transportation issues, both for smallscale and large-scale emergencies. In the event of a smallscale emergency, such as the need for immediate medical attention or a building fire, easy and efficient access by emergency vehicles will be critical. As discussed under the site-specific improvements (Section 6.2), access by emergency vehicles was considered with each potential improvement option. All preferred concepts would be designed to accommodate oversize emergency vehicles, such as pumpers and ladder trucks, and would also allow more direct access by emergency vehicles in emergency situations. For example, the new circulation pattern at the Interpretive Center would allow emergency vehicles to travel the shortest path through the parking lot and not require them to circulate around the entire outside edge of the lot. Additionally, installing a second entry lane into the site would help create additional space for vehicles to pull over so an ambulance or other emergency vehicle could enter the site more quickly. However, installing a pedestrian path along the entirety of Lighthouse Drive may use up the space previously dedicated for roadway shoulders that could be used in emergency situations. When the roadway is reconstructed, consideration should be given to whether additional shoulder space is needed for vehicles to pull over in emergency situations, or if the sporadic turnouts along Lighthouse Drive are sufficient.

Lincoln County's *Multi-Jurisdictional Natural Hazards Mitigation Plan*¹⁷ provides resources, information, and mitigation strategies for reducing risk of disaster and longterm effects resulting from natural hazards. The plan notes that the area around Yaquina Head and Moolack Beach is particularly vulnerable for coastal erosion and, because of its role in defining and supporting the community, the Yaquina Head Lighthouse is identified as an important historic resource to protect from the impact of disasters. Due to its elevation, almost the entire ONA is outside the hazard area for a tsunami resulting from an earthquake. However, the Quarry Cove ADA access road is within the hazard area for both a local and distant tsunami. Emergency evacuation for Quarry Cove visitors, especially disabled visitors, should be considered.

Preparation of an evacuation plan can help with rescue efforts during a large scale emergency.

In the event of a natural disaster such as wildfire. earthquake, or tsunami, emergency evacuation is particularly challenging at Yaquina Head ONA with Lighthouse Drive being the only ingress/egress route. BLM would have to consider how visitors and staff should evacuate the site, whether by foot, by vehicles, or both. Typically, evacuation on foot is preferred to reduce traffic congestion that could delay or prohibit evacuation. A mix of vehicles and pedestrians in the constrained space of Lighthouse Drive could be potentially dangerous. Installation of a pedestrian path along the entire length of Lighthouse Drive could help alleviate some concerns. Advertising the evacuation plan and evacuation routes for the site through wayfinding signs could also be beneficial. The Ernest Bloch Memorial Wayside parking area is the closest designated assembly area to the ONA.

6.1.8. Summary of Sitewide Improvement Strategies

Table 5 on the following page presents a summary of the strategies discussed in the previous sections.

TABLE 5: SITEWIDE IMPROVEMENT STRATEGIES

| Strategy/Option | Advantages | Disadvantages | Other Considerations |
|---|---|--|---|
| TRAFFIC CALMING STRATEGIES | | | |
| Lower Posted Speed Limit | Lower vehicle speeds may be more comfortable for pedestrians walking along the roadway | Lower speed limit may not be well observed by visitors Would require enforcement to be effective | Consistent speed limits throughout the site would likely be better observed Engineering judgment should be used to set the speed limit if not using the 85th percentile speed |
| Speed Feedback Signs | May encourage visitors to observe posted speed limits | Additional signage may contribute to information overload Would require enforcement to be effective | Can become less effective over time for regular site visitors |
| Warning Signs | Could help reduce vehicle speeds if placed appropriately Could help increase awareness of pedestrians/bicycles near the roadway | Additional signage may contribute to information overload and detract from natural setting | Consider appropriate placement and number of signs throughout site |
| Speed Bumps, Humps, and Tables | Physical obstruction forces drivers to slow down May improve safety and reduce speeds at pedestrian crossings | May be frustrating to visitors Increased maintenance required Can cause damage to vehicles May impact emergency vehicle access within the site | Consider placement for maximum effectiveness Consider pavement markings and signage to ensure visibility |
| Narrow Travel Lanes | May encourage drivers to slow down Reduces exposure and crossing distances for pedestrians | • May be difficult for trucks, RVs, and buses to maneuver tight curves | Consider reallocation of roadway travel lanes to be used for pedestrian facilities |
| Lateral Shifts and Chicanes | May encourage drivers to slow down Chicanes typically achieve a greater speed reduction than lateral shifts | Less effective where traffic volumes are higher in 1 direction or where likelihood of encountering opposing vehicle is low Increased maintenance required | Consider medians to ensure vehicles do not cross centerline Consider emergency vehicle access such as mountable medians |
| | PEDESTRIA | N ACCOMMODATION STRATEGIES | |
| Path on North Side of Lighthouse Drive | Provides an easier connection to the TSP- proposed NW Rocky Way path Wouldn't have to shift roadway alignment significantly to accommodate path between US 101 and entrance station | Path or roadway would likely have to shift south after entrance station due to limited available space Potential user safety concern due to landslides and rockfall on north side cliffs Farther from desirable ocean view | Consider appropriate crossing locations to facilitate connections to Ernest Bloch Memorial Wayside, the OCT, and other pedestrian facilities |
| Path on South Side of Lighthouse Drive | Provides an easier connection to existing pedestrian facilities within the ONA Closer to desirable ocean views to the south | • Lighthouse Drive would have to be shifted north to accommodate path on south side between US 101 and entrance station | Consider appropriate crossing locations to facilitate connections to NW Rocky Way and other pedestrian facilities outside the ONA |
| Separation Types | Guardrail and cable rails match the existing infrastructure onsite Jersey barriers provide the maximum degree of pedestrian protection Bollards can be fixed or temporary depending on site needs | Metal and plastic barriers are more susceptible to deterioration from environmental elements and require more maintenance over time Jersey barriers and guardrail require the most lateral space | • Consider which separation type best balances protection for pedestrians, aesthetics, maintenance needs, and usable pedestrian space |
| | STRATEGIES TO ENC | OURAGE ALTERNATIVE TRANSPORTATION | |
| Regular Transit Service | May help boost tourism Could reduce parking needs if highly used Could potentially be accommodated through Lincoln County Transit | May not be profitable if ridership is low | Consider location of rider drop off; consider potential delays caused by waiting in entrance station queue to ONA; consider pedestrian connections outside ONA |

YAQUINA HEAD TRAFFIC STUDY OR BLM NWO 1516291(1)

| Strategy/Option | Advantages | Disadvantages | Other Considerations | |
|---|--|--|---|--|
| | STRATEGIES TO ENCOURA | GE ALTERNATIVE TRANSPORTATION (CONT | INUED) | |
| Bicycle Accommodations | May help increase bicycle use onsite and encourage visitation by OCT users Shared lane markings help increase awareness of bicyclists in roadway | Additional signage for shared lanes may contribute to information overload | Consider best location for bike racks or bike lockers Consider how e-bikes are best accommodated within existing laws | |
| Bike Share Program/Onsite Bike Rentals | May help boost tourism If implemented in coordination with the city, could help reduce vehicular use and parking demands Environmentally friendly option for traveling through the ONA | Can be costly; fees passed on to users may not be desirable, especially if compounded with site entrance fees Helmets are generally not provided, which can be a safety concern | Consider partnering with the City of Newport to provide expanded biking options Consider where bike share stations would be located and who would maintain distribution of bikes across the system | |
| Onsite Shuttle Bus | Visitors could park and ride the shuttle bus to other onsite destinations, reducing parking needs at other locations Beneficial for groups with young children or disabled persons | May be cost prohibitive, expenses include purchase, maintenance, and operations of buses as well as staffing needs | Consider how the shuttle would be funded (user fees, grant, etc.) | |
| Guided Tour Bus | May help boost tourism Could reduce parking needs if highly used Information provided by tour guide could help enhance the visitor experience | May not be profitable if ridership is low | • Consider partnering with other jurisdictions to provide a guided tour along the Oregon Coast | |
| Electric Vehicle Accommodations | Supports Oregon's desire for electric vehicle adoption across the state Environmentally friendly option for traveling through the ONA | If electric vehicle charging station is located outside of ONA, or not well- advertised, may not boost tourism on site | Consider location of electric vehicle charging stations for maximum use | |
| | W | AYFINDING STRATEGIES | | |
| Wayfinding Strategies | Help guide visitors throughout the site and reduce confusion Reduce staffing needs to set out temporary signs Technologically integrated signs can display information in real time | Additional signage may contribute to information overload Dynamic signs may require increased maintenance and utility needs | Opportunity to enhance Yaquina Head ONA branding/messaging | |
| | PAVEMENT PRESERVATION AND MAINTENANCE STRATEGIES | | | |
| Optimal Timing | Most cost-effective way to manage and preserve roadways Extends service life Fixes minor deficiencies before they become failures | If treatments are not implemented at the optimal time, previous maintenance investments will be wasted | • Development of a pavement preservation plan will help ensure treatments are completed regularly and at the optimal time | |
| Preventive Asphalt Maintenance Activities | Treatments are most effective when implemented at the optimal time Chip sealing is the most common preventive technique in the Pacific Northwest | The expected life varies based on traffic volumes and environmental conditions | • Other pavement preservation techniques can be used but effectiveness and appropriateness may vary based on cost and existing roadway conditions | |
| Drainage Improvements | Proper drainage prevents water from penetrating the roadbed, preserving the pavement | Inadequate drainage is a primary factor in pavement failures | Proper vegetation maintenance prevents erosion and flooding and helps provide adequate drainage | |
| Routine Maintenance Activities | Help keep the roadway in proper working order and are beneficial for operations and safety | Staff time is required to complete maintenance duties on a regular basis | Developing a maintenance plan will help ensure all routine maintenance activities are completed regularly | |
| Emergency Maintenance Activities | Precautionary measures can help prevent substantial damage when an emergency occurs | • Typically conducted in response to an emergency condition or catastrophic failure | Conduct site analysis to determine where vulnerabilities occur and the most appropriate preventive measures | |

| Strategy/Option | Advantages | Disadvantages | Other Considerations |
|---|---|--|---|
| STRATEGIES TO ACCOMMODATE OVERSIZE AND ACCESSIBLE PARKING | | | |
| Accessible Parking | Designated parking locations ensure key site attractions are accessible to disabled individuals Providing a minimum number of ADA-accessible parking spaces is required under federal regulations | The minimum number of ADA stalls may not be sufficient at the ONA due to historic visitor needs and trends Designating more than the minimum number of ADA stalls reduces available parking for other visitors. During times of high visitation, enforcement may sometimes be needed to ensure ADA parking designations are respected. | Assess the appropriate number and placement of ADA parking spaces for each parking area Assess accessible routes from ADA parking to buildings |
| RV Parking | Designated RV locations minimize inappropriate parking throughout the site and facilitate turning maneuvers for larger vehicles. | There is no standard guidance available for the number of RV stalls needed RV stalls are not exempt from accessibility standards but there are no specific technical provisions Due to their length, visitors may treat RV parking stalls as travel lanes | Determine the appropriate number of RV stalls based on historic visitor trends |
| MANAGEMENT STRATEGIES | | | |
| Entrance Station Management | A second fee booth and entry lane would help expedite processing times and should eliminate the need for "line busting" | Automated fee booths would reduce staff communication with visitors | Consider the best method(s) for monitoring visitation data |
| Emergency Management | Site-specific improvements will be designed to accommodate oversized emergency vehicles Advertising the site's evacuation plan and evacuation routes with wayfinding signs can be beneficial | Emergency evacuation is particularly challenging since Lighthouse Drive is the only ingress/egress route Quarry Cove ADA access road is within the tsunami hazard area, and evacuation for Quarry Cove visitors, especially disabled visitors, should be considered | Developing an evacuation plan can help visitors and staff know how to evacuate in an emergency |

6.2. SITE-SPECIFIC IMPROVEMENTS

This section contains descriptions and performance summary of preferred configurations intended to address identified conflict points and areas of concern at the entrance station, Quarry Cove, Interpretive Center, and lighthouse. The preferred configurations reflect input from stakeholders and the public, staff feedback, information gathered from an evaluation of the existing and projected conditions of the study area, and a planning-level feasibility analysis. The preferred configurations are intended to address the identified needs and objectives defined for the Yaquina Head ONA.

6.2.1. Alternatives Analysis Process

Initially, a range of possible alternatives were prepared for consideration by BLM and the OC. After review and input, the configurations were revised and analyzed based on criteria including management and maintenance, traffic and safety performance, environmental impacts, geotechnical feasibility, and overall constructibility. The revised concepts and an analysis of advantages and disadvantages of each option according to the criteria were presented to BLM staff for additional input. The study team then conducted a site visit to identify any constraints or barriers that may limit the feasibility of an option. Through the site visit and coordination with BLM and FHWA staff. preferred configurations were identified for each of the four site-specific locations. The preferred configurations were determined to best balance competing needs, interests, and perspectives while also minimizing overall impacts and cost. The preferred configurations reflecting confirmation of site conditions are presented in this chapter. A description of each preferred configuration, performance evaluations, potential impacts, cost estimates, overall feasibility, and potential constraints are provided in the following sections. The options that were considered but not advanced can be found in Appendix C.

DESCRIPTION

A description of the preferred configuration and associated traffic flow are provided. Images showing a conceptual design of the preferred configuration, anticipated impacts resulting from construction, and traffic circulation patterns are also provided.

MANAGEMENT/MAINTENANCE

Each concept was reviewed from a staff management perspective addressing topics such as staffing and staff transportation needs, enforcement needs, emergency management, and general site management implications. To keep the site's transportation facilities operating safely and efficiently for visitors, various upgrades, repairs, or maintenance activities may also be necessary. An evaluation of maintenance needs and requirements was another consideration for each concept.

TRAFFIC PERFORMANCE

Ahigh-level evaluation of traffic performance was performed for each concept. The evaluation included an analysis of circulation patterns and turning movements, access needs, and connectivity for vehicles and non-motorized users. The ability of each option to accommodate large vehicles, including emergency vehicles, was also considered. Overall operational performance of each option was also a factor, including vehicle processing times, queue storage, and general congestion. Additionally, a parking capacity analysis was performed to determine if the proposed option provided adequate ADA, RV, and standard parking stalls based on visitation needs and intended use of each parking lot.

SAFETY PERFORMANCE

Speeds, unsafe driver behavior, and non-motorist protection were identified as primary safety concerns at the site. Safety performance was assessed through a highlevel evaluation analysis of potential vehicle conflict areas, pedestrian conflict areas, accessibility, and general user safety. The potential for unsafe driving behavior, including bypass maneuvers and speeding, was also evaluated.

ENVIRONMENTAL IMPACTS

To preserve the ONA, it is important to BLM, stakeholders, and visitors to minimize the amount of new pavement required for improvements and provide additional vegetation wherever feasible. Likewise, it is important to minimize temporary and permanent environmental impacts from construction. Potential notable environmental impacts are listed for each option. If improvements are advanced for implementation, detailed analysis would be required during the project development process to quantify specific resource impacts and identify associated permits, laws, regulations, and mitigation requirements that may apply.

<u>GEOTECHNICAL FEASIBILITY AND OVERALL</u> <u>CONSTRUCTIBILITY</u>

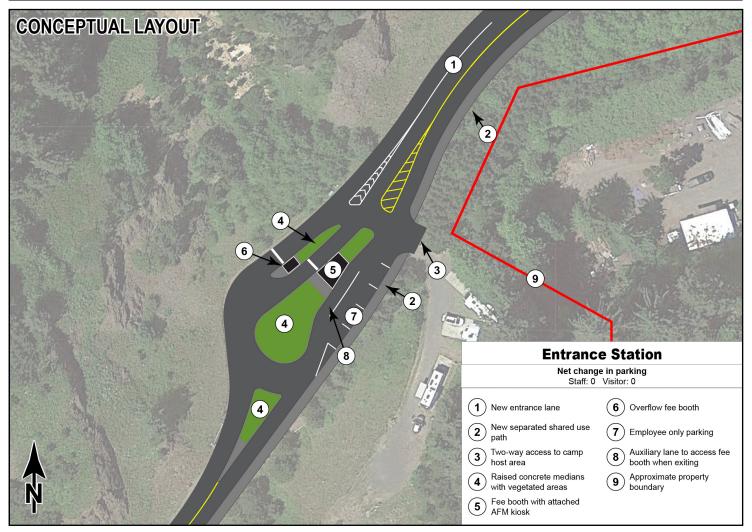

A planning-level field analysis was performed to determine the geotechnical feasibility of each option. Existing conditions such as steep hillsides, rocky cliffs, utilities, and right-of-way were evaluated and considered for potential constraints to feasibility and overall constructibility of each concept. Further field studies would be required for any concept advanced into future project development phases to determine design details and feasibility.

ESTIMATED COST

Planning-level cost estimates were developed for each preferred configuration. The estimates include costs for construction engineering, preliminary engineering, traffic control, and mobilization. A general contingency to account for unknown factors and anticipated project development risk level was also included in the cost estimates for all configurations. The estimates are presented in 2022 dollars and can be expected to increase with inflation depending on the anticipated future year of expenditure. **Appendix D** contains planning-level cost estimates for each of the preferred configurations presented.

ENTRANCE STATION PREFERRED CONFIGURATION

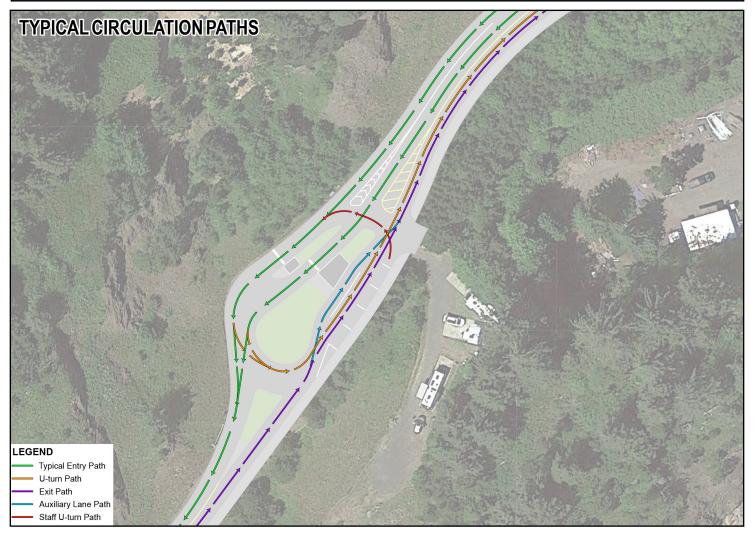

| DESCRIPTION: | MANAGEMENT/MAINTENANCE: |
|---|---|
| In this configuration the entrance station would remain in its existing location. Some roadway expansion would be necessary to provide a second entrance lane with a secondary fee booth. It is envisioned that one or both of the new entrance stations would be equipped with a credit card kiosk and a barrier gate with an automatic arm. An auxiliary exit lane would be provided to allow visitors to stop at the fee booth to talk to the ranger or return an ADA clicker. A SUP would also be constructed on one side of Lighthouse Drive beginning at the US 101 intersection and continuing westward onto the site. In the preferred configuration, the path is shown on the south side due to desirable views and separation from an active landslide area on the north side of the entrance station. Placement of the path could be pursued on the north side if constructibility or other issues were identified to the south during design. | The second entry lane with automated fee booth would provide flexibility based on staffing capacity. During the off season, one lane could be closed or automated to reduce staffing needs. The second lane would also diminish the need for staff to stand in the roadway to conduct line busting. Four staff parking stalls are anticipated to be sufficient during the typical day. An auxiliary exit lane is provided to allow visitors to stop at the fee booth to talk to the ranger or return an ADA clicker. The entrance to the camp host area is designed to allow easy access by RVs and easy turnarounds by staff with large vehicles. Increased maintenance would be required for the SUP on Lighthouse Drive. |
| ESTIMATED COST: | \$1.9M - \$2.3M |

55 <mark>98</mark>

ENTRANCE STATION PREFERRED CONFIGURATION

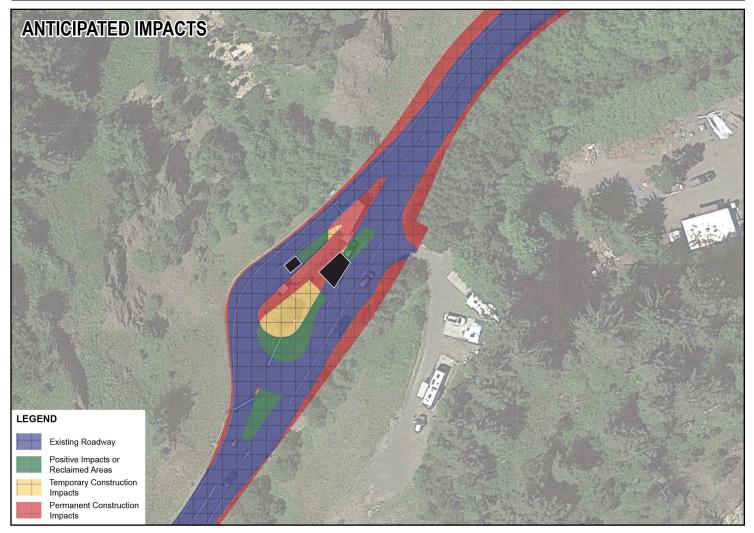

TRAFFIC PERFORMANCE:

The dual entry lanes with credit card kiosks and barrier gates with automatic arms would help expedite entrance times and reduce queues. Additional informational signage could be incorporated to indicate the fee structure and other common visitor misconceptions to reduce the number of visitor turnarounds. Additional signage would be needed to direct visitors into the appropriate lane based on payment method, pass status, or other variable. More detailed analysis will be required during the design phase to determine the appropriate length of the second entry lane to accommodate visitor demand and reduce queuing effects on Lighthouse Drive outside the ONA boundary.

SAFETY PERFORMANCE:

Compared to the existing configuration, this concept has a greater number of merging and diverging conflict points. However, dual entry lanes increase staff safety by removing the need for staff to stand in the roadway to conduct line busting. Incorporating credit card kiosks within or attached to the fee booths would also diminish the need for visitors to park, pay for their pass, and walk to the fee booth to collect their pass from a ranger. Additionally, the proposed SUP would provide protection for non-motorists and physical separation from vehicles, reducing the potential for conflicts. If the SUP is provided on the north side of the entrance station, visitor safety concerns pertaining to landslides and rockfall should be considered and properly mitigated.

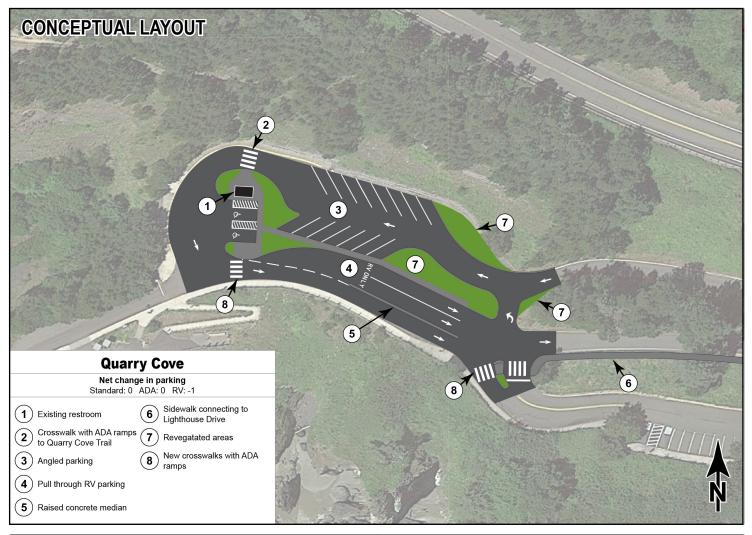

ENTRANCE STATION PREFERRED CONFIGURATION

| ENVIRONMENTAL IMACTS: | FEASIBILITY/CONSTRUCTIBILITY: |
|---|---|
| This configuration is designed to fit closely within the existing roadway footprint. Some expansion will be required on the north side of the entrance station to accommodate a second entry lane, and on the south side of the entrance station to accommodate a SUP. If a SUP is installed on the north side, the roadway would have to shift south to avoid potential impacts to the northern hillside that is an active landslide area. Vegetation could be incorporated into the concrete medians where feasible to minimize the additional pavement needed. | The hillside on the northern edge of the entrance station is an active landslide area, and impacts to this hillside should be avoided as much as possible. Rockfall barriers, retaining structures, or catchments may be needed to stabilize the slope and prevent hazardous landslide events from occurring. The length of the second entry lane should be evaluated in terms of traffic performance but should not extend past the BLM property boundary, which is approximately 500 feet east of the existing fee booth. Potential geotechnical and slope stability constraints should be investigated when determining the feasible length of the second lane. Right-of-way constraints on the south side of the entrance station should also be taken into consideration. A pinch point approximately 175 feet east of the existing pavement and the property boundary. Although no right-of-way acquisition is anticipated, property boundaries would need to be confirmed during design. |

QUARRY COVE PARKING LOT PREFERRED CONFIGURATION

| DESCRIPTION: | MANAGEMENT/MAINTENANCE: |
|---|--|
| This configuration is intended to improve circulation and provide a more logical traffic flow within the existing parking lot footprint. In this configuration, all entering traffic would circulate through a single parking aisle with angled parking stalls on both sides. Two ADA parking stalls would be provided by the restrooms, and two RV/bus parking lanes would be provided on the south side of center island. A sidewalk would also be provided on the exit road between the parking lot and Lighthouse Drive. | Slightly more maintenance will be required for the sidewalk between the parking lot and Lighthouse Drive. The overall management of this lot is substantially similar to the existing configuration. |
| ESTIMATED COST: | \$600,000 - \$900,000 |

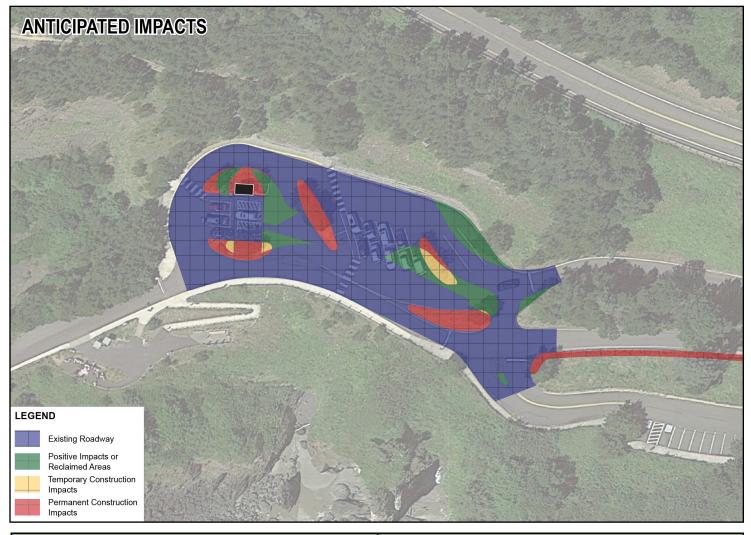

QUARRY COVE PARKING LOT PREFERRED CONFIGURATION

TYPICAL CIRCULATION PATHS Figure 1 Typical Circulation Path

TRAFFIC PERFORMANCE: SAFETY PERFORMANCE: This configuration allows more logical and functional circulation The revised circulation pattern is more logical and would likely through the upper parking lot and provides a more logical flow into the reduce the potential for conflict due to driver confusion and Quarry Cove overflow parking area. To reduce vehicle conflicts, all unintentional wrong-way driving. Construction of the sidewalk on the entering vehicles are directed to circulate through the upper lot before exit road will help enhance connectivity and provide protection for exiting or traveling into the lower lot, which may be frustrating to non-motorists. The crosswalks provide logical connections and help some visitors. The total number of standard and ADA parking spaces streamline pedestrian movements through the parking lot. remains the same with this configuration compared to existing. The angled stall closest to the restroom could be converted to an additional ADA stall if desired. There is a loss of one RV/bus parking stall.

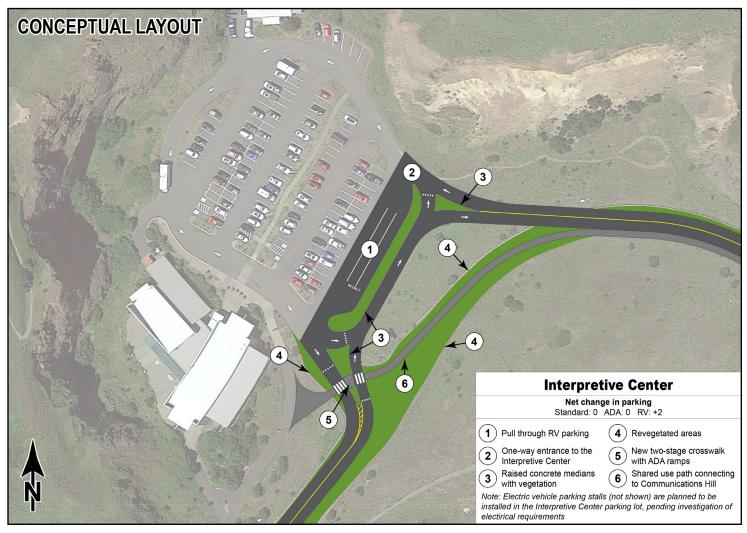

QUARRY COVE PARKING LOT PREFERRED CONFIGURATION

| ENVIRONMENTAL IMACTS: | FEASIBILITY/CONSTRUCTIBILITY: |
|--|---|
| The new configuration is generally designed to fit within the existing paved footprint, with some areas near the entrance allowing for removal of pavement and revegetation. A loss of vegetation would occur where the new sidewalk is installed. Vegetation would be provided within the concrete medians where feasible. The restrooms would remain in their existing location to avoid utility impacts. | A planning-level feasibility analysis indicates that the parking lot configuration is feasible to construct. However, the overall feasibility of the sidewalk between Lighthouse Drive and the parking lot would have to be determined through further field surveys and geotechnical analyses. |

INTERPRETIVE CENTER PARKING LOT PREFERRED CONFIGURATION

DESCRIPTION:

ESTIMATED COST:

In this configuration, all traffic would circulate through the Interpretive Center parking lot via a new approach road where the existing dog walk is located. All traffic would be directed to circulate around the outside perimeter of the lot in a counterclockwise motion. A concrete median would help separate eastbound exiting traffic from the remainder of the lot to reduce potential conflicts. A SUP connecting from the Interpretive Center to Communications Hill Trail would be installed in the existing roadbed between the new approach and the existing entrance/exit intersection. Alternatively, a SUP could be installed on the north side of Lighthouse Drive and be routed to connect with the existing path in the center aisle of the parking lot. An additional RV/bus lane would be provided adjacent to the existing lane on the edge of the lot, for a net gain of 2 RV/bus spaces. The configuration and circulation of the internal parking lot would need to be determined in future design phases.

MANAGEMENT/MAINTENANCE:

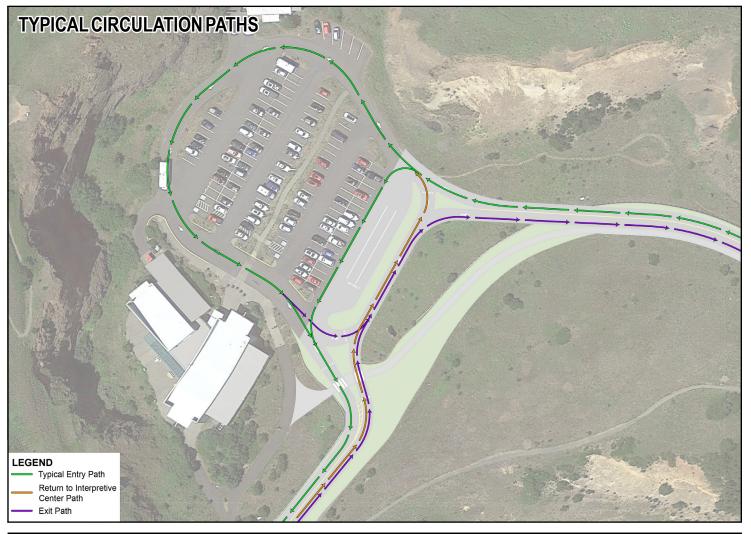

This configuration directs all traffic into the Interpretive Center parking lot without requiring staff to move traffic cones each day. By directing all traffic into the parking lot, it is anticipated that more vehicles would park in the Interpretive Center parking lot, potentially reducing the parking demand at the lighthouse. Dynamic signage could be implemented to indicate the number of available parking spaces at the lighthouse to reduce vehicle circulation at the lighthouse. However, regular visitors may be confused or frustrated by the new configuration that eliminates the ability to drive directly to the lighthouse without circling the Interpretive Center parking lot. Increased maintenance would be required for the SUP on Lighthouse Drive. BLM can revisit the configuration and circulation of the internal parking lot during future design phases to best meet user and staff needs.

\$1.1M - \$1.9M

JUNE 30, 2022

INTERPRETIVE CENTER PARKING LOT PREFERRED CONFIGURATION

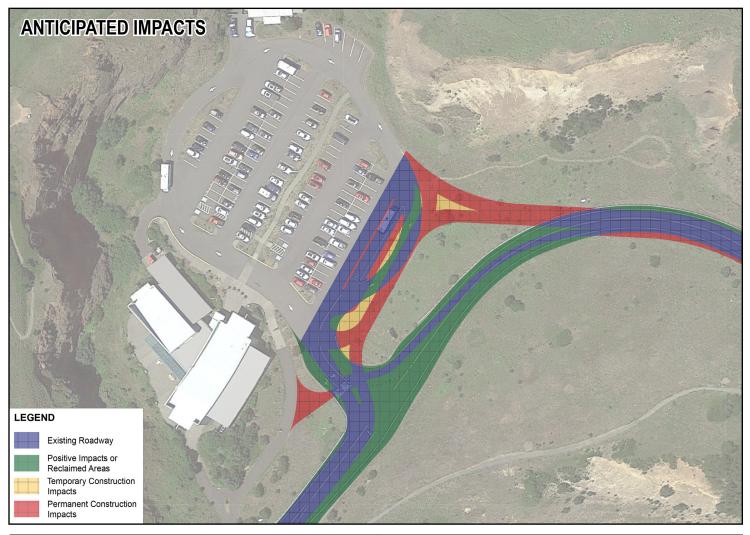

TRAFFIC PERFORMANCE:

With all traffic routed into the Interpretive Center parking lot, traffic congestion could increase within the lot. However, the separation of eastbound traffic from the remainder of the lot may help alleviate this issue. Due to the potential for increased traffic flow on the northern perimeter of the lot, the parking spaces nearest the maintenance building may be difficult to back out of during peak periods. These spaces may be better suited for staff parking. RVs and buses would have to circle the perimeter of the lot in order to park correctly in the RV/bus lanes on the southeast side of the lot and would also have to circle the lot a second time when leaving. The concrete medians would help direct traffic through the lot and may help make the one-way circulation more logical to visitors, compared to the existing configuration. The new configuration would also eliminate the existing intersection and the need for a stop sign. Although two intersections are provided in the new configuration, only yielding maneuvers are required.

SAFETY PERFORMANCE:

A two-stage pedestrian crossing is incorporated where the proposed SUP crosses Lighthouse Drive to meet the existing SUP extending from the Interpretive Center. This type of crossing requires pedestrians to cross only one lane of traffic at a time, allowing refuge in the center island between the entrance and exit lanes. The reconfigured parking lot would remove left-turn movements out of the Interpretive Center and replace that movement with a yield-controlled merging maneuver, which is considered safer due to the lower potential for severe conflicts. Potentially more conflicts are anticipated in the first aisle of the parking lot between the RV parking lanes and the first row of standard parking. It is anticipated that regular visitors may choose to travel down this aisle to more quickly exit and continue to the lighthouse rather than circling the perimeter of the lot.

INTERPRETIVE CENTER PARKING LOT PREFERRED CONFIGURATION

ENVIRONMENTAL IMPACTS:

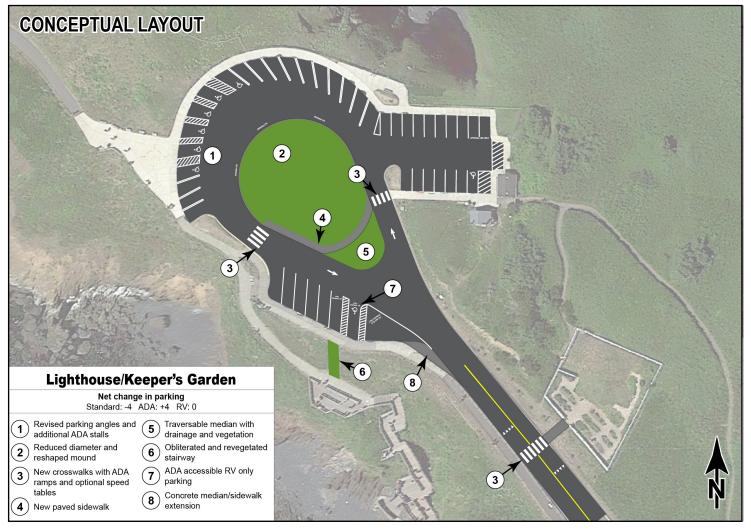

Considerable impacts would result due to construction of the new entrance road. However, the segment of Lighthouse Drive between the new entrance road and existing intersection would be obliterated and revegetated, except where the new SUP is constructed. Without the need for an eastbound left-turn bay into the Interpretive Center, Lighthouse Drive can be narrowed and revegetated to introduce more positive impacts. Potential temporary impacts may occur during construction on the hillside between Lighthouse Drive and the parking lot and in the dog walk area. Vegetation would be incorporated into concrete medians wherever feasible.

FEASIBILITY/CONSTRUCTIBILITY:

The slope and alignment of the new entrance road would have to be determined through further field surveys and geotechnical analyses due to steep slopes and potentially constraining rock faces on the northeast side of the parking lot. The SUP could be constructed in the roadbed of the existing portion of Lighthouse Drive that would be removed with this configuration. Constructing the SUP in the roadbed would alleviate feasibility issues that may otherwise exist due to the slope of the new entrance road or the proximity to potentially unstable rockfaces on the northeast side of the parking lot.

LIGHTHOUSE/KEEPER'S GARDEN PREFERRED CONFIGURATION

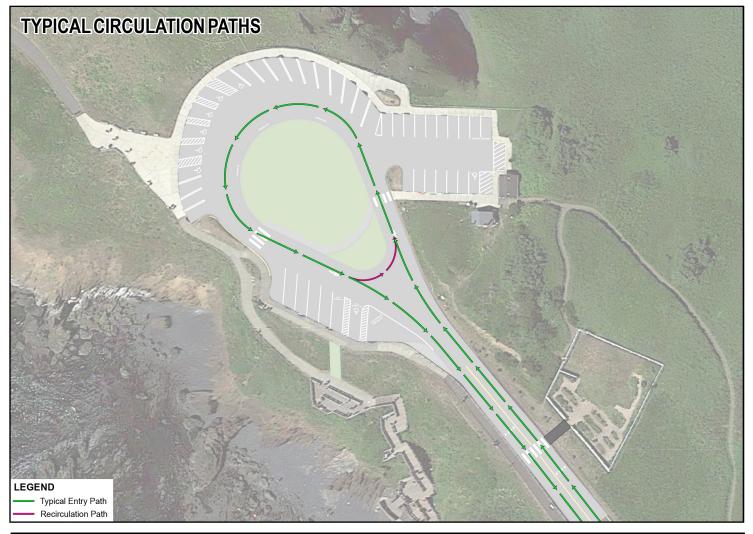

| DESCRIPTION: | MANAGEMENT/MAINTENANCE: |
|--|--|
| The reconfigured lighthouse parking lot would include wider parking stalls with more functional parking angles and more designated ADA-accessible parking. The size of the center island would be reduced to improve vehicular circulation. A sidewalk would be constructed through the center of the parking lot with ADA curb ramps and optional raised crosswalks, or speed tables, to slow traffic and enhance pedestrian visibility. A crosswalk with optional speed table would also be provided from Lighthouse Trail to the Keeper's Garden with a short SUP facilitating easier access to the garden. | Slightly more maintenance would be required for the SUP leading to the Keeper's Garden and the sidewalk across the center island, however, removal of the stairs to Cobble Beach would decrease required maintenance efforts. The reshaped center island would allow suitable circulation area for large vehicles including BLM maintenance vehicles. If speed tables are pursued, they may impact travel by low-profile vehicles. Although the reconfigured lot would better define parking and circulation, some visitors may become frustrated with the reduction in parking for standard vehicles and the presence of speed tables. During busy periods, enforcement may be needed to ensure ADA and RV/bus stalls are used appropriately. |

ESTIMATED COST:

64

\$300,000 - \$700,000

LIGHTHOUSE/KEEPER'S GARDEN PREFERRED CONFIGURATION

TRAFFIC PERFORMANCE:

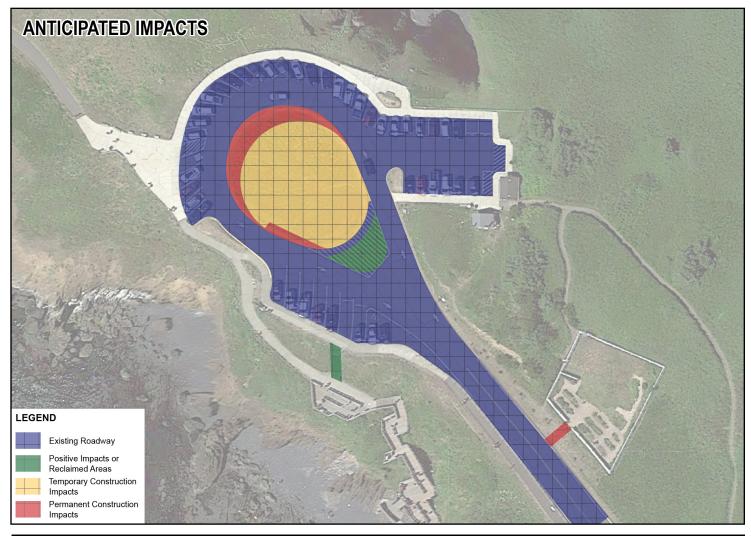

This configuration provides revised striping for parking stalls to improve parking angles. The revised striping also converts 4 standard parking stalls to 4 ADA stalls and designates at least one accessible RV/bus stalls. The parking stalls that provide the best views of the lighthouse remain as standard stalls. The center mound would be reduced in size and reshaped to allow for better circulation for large vehicles and allow better views of available parking and pedestrians in the roadway. The pedestrian path through the center mound would help streamline pedestrian movements. Removing the stairway to Cobble Beach would also help promote use of the sidewalk.

SAFETY PERFORMANCE:

The sidewalk through the center island, crosswalks with optional speed tables, and SUP to the Keeper's Garden would help streamline pedestrian movements, enhance visibility of pedestrians, and provide protection for non-motorists through the parking lot. The configuration would also help reduce the potential for inappropriate parking at the eastern nose of the center island and in the irregularly shaped portion of the designated RV/bus parking stall.

LIGHTHOUSE/KEEPER'S GARDEN PREFERRED CONFIGURATION

| ENVIRONMENTAL IMACTS: | FEASIBILITY/CONSTRUCTIBILITY: |
|--|---|
| The new configuration is designed to fit within the existing roadway footprint. A loss of vegetation would occur where the mound is reduced in size and where the SUP to the Keeper's Garden is installed. Additional vegetation would, however, be incorporated where the stairs are removed and in the extension of the center island. Additional impacts would have to be investigated in future environmental analyses, as there is potential that some features could be culturally significant. | A planning-level feasibility analysis indicates that this configuration is feasible to construct. Some modifications to utilities may be needed in the center island. |

Chapter 7: Implementation

This study evaluated the existing transportation system at the Yaquina Head ONA to determine areas of concern within the study area and identify improvements to address concerns and enhance the safety and overall experience of all users. A set of sitewide strategies and preferred configurations for four site-specific locations were identified through a comprehensive review of available information on the existing and projected transportation conditions, environmental setting, and other characteristics of the study area, coupled with focused outreach with the public and other stakeholders. Implementation of specific strategies will depend on funding availability, additional environmental analysis, design constraints, and construction considerations determined in coordination with various agencies, stakeholders, and the public.

Improvements can be implemented using federal, state, local and private funding sources. However, federal funding programs will likely be the most appropriate and applicable for improvements within the Yaquina Head ONA. Considering the current funding limits and eligibility requirements of traditional federal programs, the scale of recommended improvements, and possibility of implementing strategies that benefit the regional transportation system, additional funding or support from local and private sources may also be beneficial to accommodate existing and future visitor demands and transportation needs at the ONA. This chapter summarizes potential funding sources and next steps in the project development process once funding is secured.

7.1. FUNDING STRATEGIES

On November 15, 2021, the Bipartisan Infrastructure Law, or Infrastructure Investment and Jobs Act (IIJA), was signed into law. The bill reauthorizes several federal-aid surface transportation programs defined by the previous Fixing America's Surface Transportation (FAST) Act through federal fiscal year 2026. The bill also invests approximately \$400 billion over that period to repair the nation's roads and bridges and support projects that will create jobs, boost the economy, make the transportation system safer and more resilient. In addition to reauthorizing surface transportation funding programs, the IIJA also contains significant new funding for roadways, bridges, and other major projects funded by FHWA and the US Department of Transportation.

The following sections provided an overview of federal funding sources authorized under IIJA that may be applicable for transportation projects and programs in the Yaquina Head ONA. A narrative description of each potential funding source is provided including the source of revenue, required match, purpose for which funds are intended, means by which the funds are distributed, and the agency or jurisdiction responsible for establishing priorities for use of the funds.

7.1.1. Federal Lands Access Program (FLAP)

The Federal Lands Access Program (FLAP) was created to provide safe and adequate transportation access to and through federal lands for visitors, recreationists, and resource users. The program is directed towards public highways, roads, bridges, trails, and transit systems that are located on, adjacent to, or provide access to federal lands and for which title or maintenance responsibility is vested in a state, county, town, township, tribal, municipal, or local government. In this case, improvements to US 101, Lighthouse Drive, NW Rocky Way, NW Gilbert Way and trails connecting to Yaquina Head ONA (federal land owned and operated by BLM) would be eligible for FLAP funding.

The FHWA Western Federal Lands Highway Division administers the program, and local governments are eligible applicants for the funds. All proposals must be submitted jointly by the Federal Land Management Agency(ies) (FLMA) whose lands are accessed and the entity with title or vested maintenance responsibility (state, county, town, township, tribal, municipal or local government). Projects eligible for funding include capital improvements, site enhancements, surface preservation, safety improvements, transit services/facilities, planning studies, and research projects. Competitive projects are those that improve multimodal transportation on roads, bridges, trails, transit systems, and other transportation facilities, with an emphasis on high-use federal recreation sites and federal economic generators.

Funds are allocated among the states using a statutory formula based on road mileage, number of bridges, land area, and visitation. Oregon is currently estimated to receive approximately \$39 million in FLAP funds annually. Proposals requesting at least \$100,000 or more will be considered. Under IIJA, a local match is no longer required.

2021 FLAP PROPOSAL

The Western Federal Lands Highway Division of FHWA solicited for proposals to receive funds through Oregon FLAP in fiscal years 2024 and 2025. ODOT, City of Newport, and BLM submitted a joint proposal for access improvements to Yaquina Head ONA. The proposed improvements included the addition of designated pedestrian/bicycle facilities on Lighthouse Drive, NW Rocky Way, and US 101; pedestrian crossing improvements at the US 101/Lighthouse Drive intersection and Lighthouse Drive approaches; ADA-accessible sidewalk to fill gaps adjacent to US 101; provision of a shuttle bus and ADA-accessible transit stop within adjacent city right-of-way; and pavement preservation on Lighthouse Drive.

7.1.2. Federal Lands Transportation *Program (FLTP)*

The Federal Lands Transportation Program (FLTP) was established to improve the transportation infrastructure owned and maintained by FMLAs including BLM, USFWS, National Park Service (NPS), US Forest Service (USFS), US Army Corps of Engineers, Bureau of Reclamation, and independent federal agencies with land and natural resource management responsibilities. By statute the NPS, USFWS, and USFS receive annual sums. Other FMLAs receive funding based on application submissions and determinations by the Office of the Secretary of Transportation by use of a performance management model. The federal share for FLTP projects is 100 percent. In addition, FLTP funds may be used to pay the nonfederal share or match of the cost of any project that is funded under title 23 of United States Code (USC) [FLAP] or chapter 53 of title 49 USC [Public Transportation], and that provides access to or within federal or tribal land.

FLTP invests in the nation's infrastructure and supports critical transportation needs within the country's transportation network by providing access within national parks, forests, wildlife refuges, recreation areas, and other federal public lands. FLTP funding is available for program administration, transportation planning, research, preventive maintenance, engineering, rehabilitation, restoration, construction, and reconstruction of federal lands transportation facilities as well as capital, operations, and maintenance of transit facilities. The program focuses on improving transportation facilities that are located on, adjacent to, or provide access to federal lands. The facilities must be owned and maintained by the federal government.

In this case, BLM would be eligible to receive FLTP funds for improvements within the ONA. FLTP funds could also be used as a match for FLAP funds received by ODOT or City of Newport if needed. BLM generally uses FLTP for improvement projects within the ONA. FLTP funds would likely be the largest potential funding source for the proposed improvements at the site.

7.1.3. Direct Federal Spending for Resilient Recreation Sites

The DOI Office of the Secretary will implement a new funding program under IIJA to improve resilience of recreation sites on federal lands, including Indian forest

or range lands. The Office of the Secretary is authorized to spend allocated funds on projects to restore, prepare, or adapt recreation sites on federal land that have experienced or may likely experience visitation and use beyond the carrying capacity of the sites. Funding is available until expended for total amount of \$905 million across the entire program. However, portions of the total program amount are allocated to specific fiscal years, each with a different period of availability. The 2022 funding amount is \$45 million.

If visitation at Yaquina Head ONA continues to increase beyond the carrying capacity of the site, it is possible the ONA may be eligible for funding under this program.

7.2. NEXT STEPS

The Yaquina Head Traffic Study is a planning document that helps identify potential improvements to be completed as funding becomes available. At this time, no funding or timeframe for construction of the recommended projects has been identified. **Figure 10** illustrates the project implementation process. After the traffic study is complete, a project would advance from the planning stage into the project development and eventual construction phases. Public involvement would occur throughout all phases. The general next steps for implementation are listed below.

- 1. A funding source(s) is identified and secured.
- 2. The project is nominated for execution by the implementing agency.
- 3. Feasibility studies, environmental investigations, and other development processes are completed as applicable.
- 4. A design is completed for the project and approved by responsible agency(ies) as needed.
- 5. Right-of-way is acquired for the project if necessary.
- 6. The project is constructed.

Although improvements initiated onsite at Yaquina ONA would fall under BLM jurisdiction, it will be important to coordinate with ODOT and the City of Newport to ensure that connecting facilities are consistent with the transportation needs of all agencies involved.

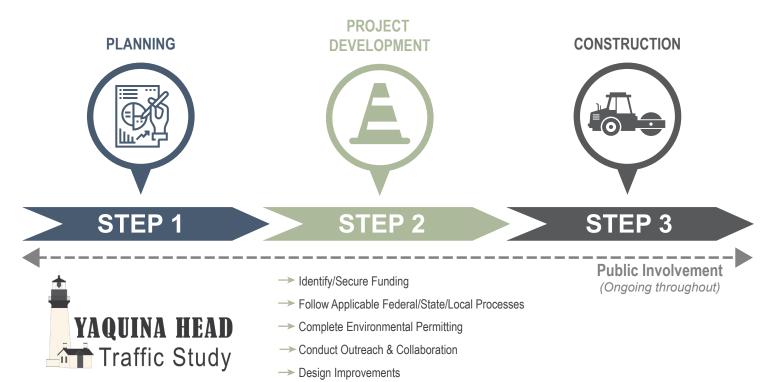

FIGURE 10: PROJECT IMPLEMENTATION PROCESS

7.2.1. Environmental Review Process

The National Environmental Policy Act (NEPA) process begins when a federal agency develops a proposal to take a major federal action as defined in 40 Code of Federal Regulations 1508.1. Federal actions include adoption of official policy, formal plans, or program, as well as approval of specific projects, such as construction or management activities. Each federal agency is required to develop NEPA procedures that supplement the general regulations. BLM's *NEPA Handbook (H-1790-1)*¹⁸ provides additional guidance on BLM-specific NEPA compliance activities. Several jurisdictions have also established state or local environmental review requirements, however, Oregon relies on the federal NEPA regulations.

The environmental review under NEPA can involve three different levels of analysis—Categorical Exclusion Determination (CATEX), Environmental Assessment (EA), and Environmental Impact Statement (EIS)—as discussed in the following sections. Based on the scope and scale of the proposed improvements, an EA may be required for site-specific improvements and some sitewide strategies. In most cases, a CATEX will be sufficient to implement other sitewide strategies such as wayfinding or installing bike racks.

CATEGORICAL EXCLUSION DETERMINATION (CATEX)

A federal action may be categorically excluded from a detailed environmental analysis when the federal action normally does not have a significant effect on the human environment. BLM provides a list of categorical exclusions with extraordinary circumstances which must be reviewed for applicability. If an extraordinary circumstance applies, the proposed action defaults to the next level of environmental review. When no extraordinary circumstances apply, a CATEX is prepared. The list is included in the DOI *Department Manual* Part 516 Chapter 11.¹⁹

ENVIRONMENTAL ASSESSMENT/FINDING OF NO SIGNIFICANT IMPACT (EA/FONSI)

If the federal agency determines that a CATEX does not apply to a proposed action, the agency may then prepare an EA. The EA determines whether or not a federal action has the potential to cause significant environmental effects. BLM provides specific guidance for preparing an EA in Department Manual 516. The manual states that an EA is usually appropriate for land use plan amendments and land use plan implementation decisions including site-specific project plans, such as construction of a trail.

If the responsible official is uncertain of the potential for significant impacts and needs further analysis to make a determination, an EA should be completed.

Generally, the EA includes a brief discussion of:

- The purpose and need for the proposed action
- Alternatives as described in section 102(2)(E) of NEPA
- The environmental impacts of the proposed action and alternatives
- A listing of agencies and persons consulted

If the agency determines that the action will not have significant environmental impacts, the agency will issue a Finding of No Significant Impact (FONSI). A FONSI is a document that presents the reasons why the agency has concluded that there are no significant environmental impacts projected to occur upon implementation of the action. If it is anticipated or determined that the action would result in significant environmental impacts, an EIS is prepared.

It is anticipated that an EA would be required to assess the environmental impacts of each of the site-specific improvements.

ENVIRONMENTAL IMPACT STATEMENT (EIS)

Federal agencies prepare an EIS if a proposed major federal action is determined to significantly affect the quality of the human environment. An EIS should also be completed in circumstances where a proposed action is directly related to another action(s), and cumulatively the effects of the actions taken together would be significant, even if the effects of the actions taken separately would not be significant. The regulatory requirements for an EIS are more detailed and rigorous than the requirements for an EA. The EIS process ends with the issuance of the Record of Decision which explains the agency's decision, describes the alternatives the agency considered, and discusses the agency's plans for mitigation and monitoring, if necessary.

7.2.2. Cultural and Historic Review Process

Section 106 of the National Historic Preservation Act (NHPA) requires federal agencies to consider the effects of their undertakings on historic properties and sites. Additionally, NEPA requires an analysis of potential impacts to cultural, historic, and tribal resources and possible mitigation measures. It is BLM policy to coordinate NEPA and NHPA responsibilities, including consulting with appropriate entities such as State and Tribal Historic Preservation Officers (SHPO/THPO), identifying protected properties and sites, evaluating project alternatives and assessing project effects.²⁰ BLM would conduct NHPA and NEPA reviews concurrently for future improvement projects at the Yaquina Head site.

1.0. INTRODUCTION

The Federal Highway Administration (FHWA) has initiated a study in coordination with the Bureau of Land Management (BLM) to evaluate the transportation system at the Yaquina Head Outstanding Natural Area (ONA) and address traffic and safety needs at the site.

The Yaquina Head ONA is a high-use fee site located on a prominent headland north of Newport, Oregon. The 100-acre site was officially designated as an ONA due to its scenic quality and cultural and natural resources. BLM manages the site to optimize recreation, education, and conservation opportunities for the benefit of current and future visitors.

The site's transportation system includes 1.21 miles of two-lane asphalt surfaced roads and four parking areas which provide access to the historic Yaquina Head Lighthouse, Quarry Cove, and Interpretive Center. Additionally, several trails providing pedestrian access to various recreation opportunities in and around the historic Yaquina Head Lighthouse. Increasing visitation to the Yaquina Head ONA has resulted in growing traffic congestion and risk of user conflicts. The *Yaquina Head Traffic Study* will identify and address transportation needs including operations at the entrance station, overall site circulation, bicycle and pedestrian accommodations and safety enhancements, parking management, pavement preservation, and congestion mitigation. When identifying potential improvements, the study will consider public and stakeholder comments, environmental constraints, constructability challenges, and financial feasibility. The study will be a collaborative process with FHWA, BLM, Oregon Department of Transportation (ODOT), the City of Newport, stakeholders, and the public to identify needs and potential solutions.

The study process involves early communication with interested parties to help identify needs, constraints, and opportunities to determine reasonable improvements given available resources and local support. Community, stakeholder, agency, and public involvement are important study components. Several strategies are proposed to disseminate information and elicit meaningful participation. These opportunities will include:

- providing information on critical elements and observations within the study area;
- seeking comments and answering questions throughout the study process; and
- presenting findings and recommendations.

1.1. Purpose of the PIP

Education and public outreach are essential parts of fulfilling the responsibility to inform the public about the study process. Public involvement is critical to ensure the study reflects visitor and local community needs, issues, and values. Comments from the public foster cooperation and help study staff, consultants, and local officials make informed decisions.

An initial step in the study process is to develop a *Public Involvement Plan* (PIP) to guide public participation opportunities. The PIP outlines key audiences, proposed public participation strategies, and opportunities for engagement with members of the public and stakeholders. The goal of the PIP is to facilitate ongoing public engagement throughout the study process to ensure the needs and concerns of all Yaquina Head ONA site users are appropriately identified and addressed. The PIP describes the information and participation opportunities that will be provided as part of the study.

2.0. AUDIENCES

Active participation will be encouraged at every stage of the study process. Development of the study will be overseen by an oversight committee (OC) that will guide work, review deliverables, and provide general oversight on all matters related to the study. The following sections discuss the study contacts, oversight committee, anticipated key stakeholders, and other interested parties to be included in the study process.

2.1. Study Contacts

The following contact information for FHWA, BLM, and RPA representatives will be provided in all published information. These individuals will serve as main points of contact for the study.

Carrie Warren, PE

FHWA Project Manager 610 East Fifth Street Vancouver, WA 98661 (360) 619-7881 carrie.warren@dot.gov Matt Betenson Yaquina Head Site Manager – BLM 750 NW Lighthouse Drive Newport, OR 97365 (541) 574-3142 blm or no yhona comments@blm.gov Sarah Nicolai, PE, PTP Consultant Project Manager 3147 Saddle Drive Helena, MT 59601 (406) 447-5038 snicolai@rpa-hln.com

2.2. Oversight Committee

The OC will guide work and review deliverables produced by the consultant team. Regular OC meetings will be held to discuss study milestones, review materials, and provide feedback. RPA's project manager and support staff will facilitate meetings to present updates on the work effort. The meetings will track progress and address study development issues and questions. The meetings are important for the exchange of technical information and ideas during the development of the study. The following topics are anticipated to be covered at the OC meetings, which will be held using both in-person and virtual formats.

- OC Meeting 1 (May 2021, in person): Work Tasks, Data Gaps, Public Involvement Plan, Schedule
- **OC Meeting 2** (September 2021, virtual): Existing and Projected Conditions, Preliminary Issues and Concerns, Public Outreach #1 Summary
- OC Meeting 3 (November 2021, virtual): Existing and Projected Conditions Memorandum
- OC Meeting 4 (January 2022, in person): Concept Identification, Public Outreach #2
- OC Meeting 5 (February 2022, virtual): Concept Refinement, Public Outreach #2 Summary
- OC Meeting 6 (March 2022, virtual): Draft Feasibility Report, Public Review Period
- OC Meeting 7 (May 2022, virtual): Public Comments, Final Report

2.3. Stakeholders

A stakeholder contact list will be developed to include individuals or groups identified in coordination with the OC and through the public involvement process. Comments from a diverse range of stakeholders is important to the study process. Areas of concern will be identified through stakeholder outreach and may include visitor safety, conflicts between user types, site access, right-of-way encroachment, and alignment with statewide and local planning efforts. Stakeholders will include adjacent and nearby property owners and residents, state and local governments, tribal organizations, educational and non-profit organizations, recreational interest groups, business and tourism interests, and other interested parties. Specific stakeholder representatives will be identified building from the initial list developed at the OC meeting, as identified in the following list.

- Adjacent property owners
- Yaquina Head neighbors
- City of Newport / Newport City Council
- Lincoln County / Lincoln County Commission
- US Fish and Wildlife Service
- US Coast Guard
- Confederated Tribes of Siletz Indians
- Oregon Parks and Recreation Department
- Friends of Yaquina Lighthouses
- Oregon Coast Trail Committee
- Surfrider Foundation
- Pedestrian/bicycle community
- Spanish-speaking community / Centro de Ayuda
- Limited Mobility Advocates

All stakeholders will be invited to participate in public outreach activities. To ensure a broad range of stakeholder participation, outreach through direct emails, phone calls, and other forms of communication may also be used. Coordination with select stakeholders may occur through BLM staff as appropriate.

2.4. Public Contacts

Members of the public representing both local and visitor perspectives will be invited to participate in the study. Public comments will be solicited throughout the study process. Additionally, an official comment period will be provided after the release of the draft *Yaquina Head Traffic Study* to obtain feedback on the proposed improvements identified.

All public comments will be directed to BLM and FHWA. Comments will be forwarded to RPA to catalog, collate, characterize and form draft responses to comments received. FHWA, in conjunction with BLM, will provide final responses to all public comments.

Common themes from public comments will be compiled and published in a public-facing document, such as a project newsletter, to show the public how their comments were considered.

3.0. OUTREACH AND ENGAGEMENT

Information will be provided in multiple formats, and public and stakeholder comments will be solicited and encouraged at every stage of the study process. Several public engagement strategies are proposed to reach a broad audience and elicit meaningful participation. This section provides an overview of the outreach methods that will be used to gather comments from stakeholders and the public.

3.1. Outreach Strategies

Targeted outreach is intended to obtain meaningful comments and dialogue about the study process, to share information, and to identify important considerations. Anticipated targeted outreach activities and strategies are described in the following sections.

Mailing List

A contact list of email and physical addresses will be maintained and updated throughout the study process for those wishing to receive periodic updates. The list will include members of the public who have expressed interest in the study and all identified stakeholders, including landowners directly adjacent to the study area. The list will be developed in coordination with partner agencies including BLM and the City of Newport building from known contacts from previous studies or projects in the same geographic area. Outreach to the contact list will include distribution of newsletters, outreach announcements, and other important information regarding the study process.

<u>Website</u>

RPA will be able to share important study information via the website of Friends of Yaquina Lighthouses and/or the BLM's site. Materials including public outreach notices, newsletters, study reports, and other relevant study information may be posted on the websites.

News Releases

Before public outreach activities, news releases will be developed, reviewed, and approved by FHWA and BLM, and distributed to local media outlets to be identified in coordination with the oversight committee, potentially including the *Newport News Times, Oregon Coast Daily News, Oregon Coast Today, News Guard*, and local radio stations. In addition to announcing the event location, time, date, and format, the releases will explain the study purpose and key issues.

Stakeholder Outreach

Targeted stakeholder outreach will be conducted at the time of public outreach activities to encourage stakeholder participation. Stakeholder outreach methods may include email, telephone contacts, or coordination through BLM.

Public Outreach Activities

Two sets of public outreach activities will be conducted for this study. The first effort will occur during the 2021 summer field data collection period and will be focused on gathering information from the local community and site visitors. The purpose of this outreach will be to explain the study process and gather information from the public to identify issues and concerns relating to the site. To provide the public with background information and explain the study process, RPA will prepare a brief recorded presentation to be posted on the Friends of Yaquina Lighthouses website. To gather background information and public opinions, RPA will prepare a survey. RPA will provide handouts with a link or QR code directing visitors to the survey at the Yaquina Head ONA Interpretive Center and the entrance gate. Visitor signage including flyers and notice boards with information about the study and the survey will also be developed and posted at the site. RPA will coordinate with BLM to identify the best locations to post information and collect completed paper surveys to gain a broad sampling of site visitors. It will be important to capture the opinions of different user groups, including yearly visitors, new visitors, residents, disabled users, bicyclists, pedestrians, and others. The goal of the first outreach effort will be to share information about the study and gather feedback from visitors about site needs based on their observations and experiences and the site.

During the 2022 winter site visit, a second round of public outreach will be conducted to share information. An open house event is proposed to enable drop-in participation at the public's convenience. At the event, study team members will share existing conditions information, key findings, and preliminary improvements concepts. The meeting location will be determined in coordination with the oversight committee in the vicinity of the City of Newport and the Yaquina Head ONA. A ticketing system for individual appointments or other

measures may be incorporated depending on local health and safety guidelines. Members of the public will have an opportunity to view exhibits summarizing key findings and preliminary recommendations, talk with members of the study team, provide feedback, and obtain printed copies of study materials.

The second round of public outreach activities are proposed to be held in person, however the format may be modified as needed based on health and safety restrictions. Supporting materials will be developed for each set of outreach activities and may include a combination of exhibits, informational sheets, and newsletters. Exhibits will display the study area and the surrounding vicinity, site photographs, proposed improvements as they are developed, and the study schedule. Printed and digital versions of the materials will provided.

Newsletters

Two study newsletters will be developed corresponding with each of the two sets of public outreach activities to be held during the study process. The newsletters will include background information about the study, identified needs, observations and findings, proposed solutions, public involvement activities, anticipated schedules, and a feedback mechanism to elicit comments from the recipients. Following review and approval by BLM, up to 200 printed copies will be distributed on site, and a digital version will be developed for distribution to the study email list and to partner agencies.

3.2. Access and Visibility

The study team will strive to provide convenient, accessible opportunities for the public and stakeholders to participate in the study process. The following measures will be used.

Published Materials

All published study information will be developed in compliance with applicable federal accessibility regulations, including the Americans with Disabilities Act (ADA) and Section 508 of the Rehabilitation Act. Alternative formats will be available upon request. Contact information for FHWA, BLM, and RPA representatives will be provided with all published materials. The BLM Public Affairs Group will review all materials before publishing.

Spanish Language Outreach

RPA will contact and coordinate with the Newport Centro de Ayuda to outreach to the Spanish-speaking community. The organization provides interpretation and translation services and is a valuable resource to ensure Spanish-speaking community members are informed and represented in study efforts. Additionally, RPA will provide Spanish versions of all printed outreach materials.

Consideration of Public and Stakeholder Comments

All comments from stakeholders and the public will be considered by the OC throughout the study process. Comments received through public outreach efforts and throughout the study will be summarized in project newsletters. Public comments received on the draft *Yaquina Head Traffic Study* will be documented and included as an appendix.

Considerations for Traditionally Underserved Populations

Additional efforts are necessary to involve traditionally underserved segments of the population, including disabled, minority, non-English-speaking, and low-income individuals. The following steps will help with these efforts.

- <u>Plan Meetings Carefully</u> In-person public meetings will be held in locations that are accessible and ADA compliant. Alternative accommodations will be available upon request.
- <u>Seek Help from Community Leaders and Organizations</u> To facilitate involvement of traditionally underserved populations, community leaders and organizations that represent these groups will be consulted about how to reach their members most effectively.
- <u>Be Sensitive to Diverse Audiences</u> At public outreach events, the study team will attempt to communicate as effectively as possible. Presenters will avoid using overly technical language and will explain concepts in simple terms. Spanish-language materials will be provided.

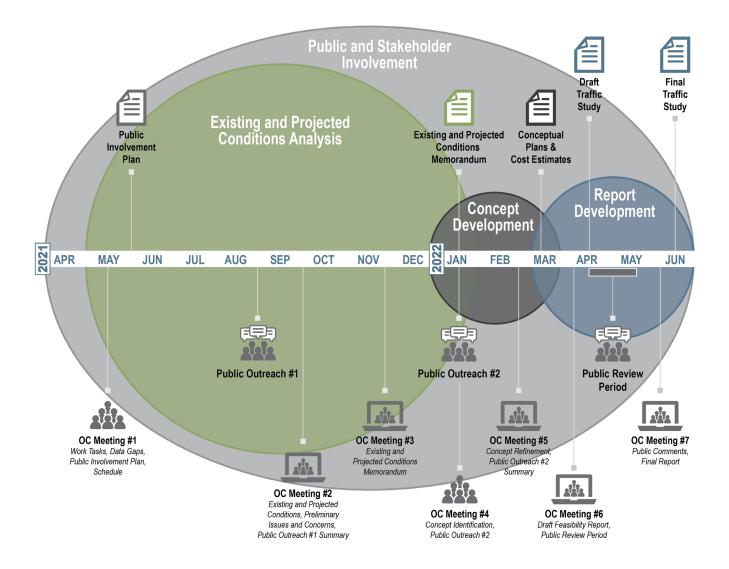

4.0. OUTREACH SUMMARY AND SCHEDULE

This PIP establishes guidelines and procedures for encouraging public participation. The following communication strategies and techniques will be used to share information and to seek public and stakeholder comments.

- A mailing list will be developed to contact interested stakeholders and members of the public.
- The Friends of Yaquina Lighthouses and/or BLM websites will be used to post study information.
- News releases will be prepared to announce public outreach activities and provide status updates.
- Stakeholder outreach will include targeted invitations to participate in study activities.
- Two set of public outreach activities will be held to learn about issues and concerns and to share proposed concepts.
- Newsletters will be developed in advance of public outreach activities.
- Public comments will be collected and considered throughout the study process.
- Published materials will be sensitive to diverse audiences and will be approved by the BLM Public Affairs Group.

The proposed schedule for public and stakeholder involvement activities is illustrated below.

Appendix A2: Public Outreach #1 Materials

The Federal Highway Administration has initiated a study, in coordination with the Bureau of Land Management, to evaluate the transportation system at the Yaquina Head Outstanding Natural Area.

La Administración Federal de Carreteras, en coordinación con la Oficina de Gestión Territorial, ha iniciado un estudio para evaluar el Área Natural Destacada de Yaquina Head.

A survey is being conducted to gather feedback about transportation needs and concerns. The survey will help the study team identify areas of focus.

Se está llevando a cabo una encuesta para recoger comentarios sobre las necesidades e inquietudes relativas al transporte. La encuesta ayudará al equipo del estudio a identificar áreas de interés.

Please respond to the survey by SEPTEMBER 10, 2021 Responde a la encuesta hasta el

10 DE SEPTIEMBRE DE 2021

STUDY AREA

Yaquina Head ONA is a 100-acre protected area managed by the BLM and officially designated by the United States as an Outstanding Natural Area due to its scenic quality, and cultural and natural resources. The ONA is located on a prominent headland north of Newport, Oregon. The site provides numerous recreation opportunities including seal, sea bird, and wildlife viewing; whale watching; tide pooling; and walking and biking.

The ONA is accessible via Lighthouse Drive which begins at the intersection with the Oregon Coast Highway (US Highway 101) at Mile Post 137.61. The Yaquina Head ONA boundary begins about 0.2 miles west of the intersection. Within the site, the primary transportation system is comprised of 1.21 miles of asphalt paved roads and four parking lots. Additionally, trails provide pedestrian access to various recreation opportunities in and around the Yaquina Head Lighthouse.

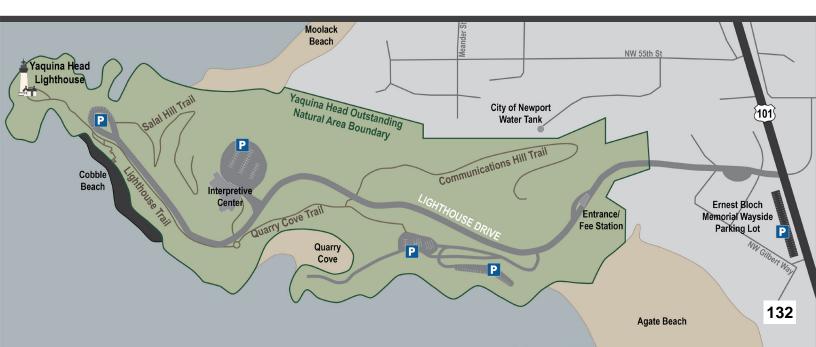

INTRODUCTION

The Federal Highway Administration (FHWA) has initiated a study, in coordination with the Bureau of Land Management (BLM), to evaluate the Yaquina Head Outstanding Natural Area (ONA). Increasing visitation to the Yaquina Head ONA has resulted in growing traffic congestion and risk of user conflicts. The *Yaquina Head Traffic Study* will identify and address site needs including operations at the entrance station, overall site circulation, multimodal (bicycle and pedestrian) accommodations and safety enhancements, parking management, pavement preservation, and congestion mitigation. The study will be a collaborative process with FHWA, BLM, Oregon Department of Transportation (ODOT), the City of Newport, stakeholders, and the public to identify needs and potential solutions.

PURPOSE

The purpose of the *Yaquina Head Traffic Study* is to determine what transportation improvements can be made to address operational, safety, and geometric needs and any other areas of transportation concern identified through public and stakeholder outreach efforts. The study will consider public and stakeholder comments, environmental constraints, constructability challenges, and financial feasibility when identifying potential transportation improvements. The intent of the study is to provide an efficient transition from transportation analysis to future project development and environmental review, if any, based on identified need and funding availability. This is an initial study to help inform a future design or construction project.

GET INVOLVED

Public comments will be considered to better understand potential issues, concerns, opportunities, and constraints. To submit comments, view documents, and to learn more about the study please visit:

www.yaquinalights.org/yaquina-head-traffic-study

SURVEY

A survey is being conducted to gather feedback about transportation needs and concerns at Yaquina Head ONA. The survey will help the study team identify areas of focus.

Please respond to the survey by SEPTEMBER 10, 2021

STUDY CONSIDERATIONS

The Yaquina Head Traffic Study is focused on the transportation aspects of the Outstanding Natural Area. A high-level analysis of the existing environmental setting will be conducted in order to identify environmental constraints that may affect potential transportation recommendations. The following topics will be evaluated and considered in the study:

Site Circulation

Existing and Future Traffic Operations

*ふう Multimodal Accommodations (Pedestrians, Bicyclists, Transit)

Parking

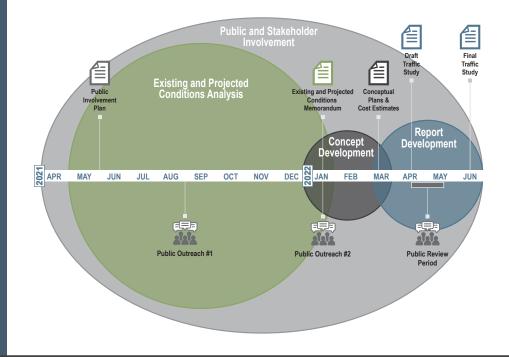

Roadway Geometrics and Infrastructure

User Safety

Past Planning Efforts and Applicable Regulations

SCHEDULE

The Yaquina Head Traffic Study kicked off in April 2021. The first public outreach effort is occurring during the summer of 2021 and will help inform development of the study. A second public outreach effort will occur in January 2022 in coordination with release of the draft *Existing and Projected Conditions Memorandum*. All comments will be considered and incorporated as appropriate as the study team moves into the concept development phase. The draft *Traffic Study* is anticipated to be complete in April 2022. Following a public and stakeholder review period, the final *Traffic Study* is anticipated to be complete in June 2022.

The Yaquina Head Outstanding Natural Area was established by Congress to provide for the conservation and development of the scenic, natural, and historic values of the area; the continued use of the area for education, scientific study, and public recreation; and protection of the wildlife habitat of the area.

ÁREA DE ESTUDIO

El ONA de Yaquina Head es un área protegida de 100 acres gestionada por el BLM y designada oficialmente por los Estados Unidos como un área natural destacada debido a su calidad paisajística y recursos culturales y naturales. El ONA se encuentra en un cabo prominente al norte de Newport, Oregon. El sitio ofrece numerosas oportunidades de esparcimiento, como el avistamiento de focas, aves marinas y fauna silvestre; también se puede avistar ballenas, bañarse en pozas marinas, realizar caminatas o andar en bicicleta.

Se puede acceder al ONA entrando por Lighthouse Drive, que comienza en el cruce con el Oregon Coast Highway (US Highway 101) a la altura del Mile Post 137.61. El límite del ONA de Yaquina Head comienza a unas 0.2 millas al oeste del cruce. Dentro del sitio, el sistema de transporte principal se compone de 1.21 millas de carreteras asfaltadas y cuatro estacionamientos. Asimismo, los senderos ofrecen acceso peatonal a diversas instalaciones recreativas en el Faro de Yaquina Head y sus alrededores.

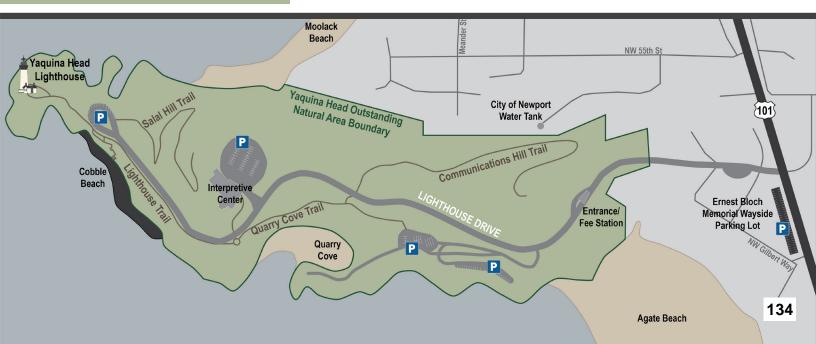

INTRODUCCIÓN

La Administración Federal de Carreteras (FHWA), en coordinación con la Oficina de Gestión Territorial (BLM), ha iniciado un estudio para evaluar el Área Natural Destacada de Yaguina Head (ONA). El incremento de visitantes en el ONA de Yaguina Head ha provocado una creciente congestión del tráfico, así como el riesgo de conflictos entre usuarios. El Estudio del Tráfico de Yaquina Head identificará y abordará las necesidades del sitio, incluvendo las operaciones en la estación de entrada, la circulación general del sitio, mejoras a las instalaciones multimodales (bicicletas y peatones) y a la seguridad, gestión de estacionamientos, conservación de la acera y reducción de la congestión. El estudio será un proceso de colaboración entre FHWA, BLM, ODOT, la ciudad de Newport, las partes interesadas y el público en general, a fin de identificar necesidades y potenciales soluciones.

OBJETIVO

El objetivo del Estudio del Tráfico de Yaquina Head es determinar qué mejoras de transporte se pueden realizar para abordar las necesidades operativas, geométricas y de seguridad, y cualquier otra área de interés relativa al transporte que se identifique mediante las iniciativas de divulgación pública y de las partes interesadas. El estudio tomará en cuenta los comentarios del público y de las partes interesadas, las limitaciones medioambientales, desafíos constructivos y viabilidad financiera al identificar posibles mejoras en el transporte. Su objetivo es fomentar una transición eficiente del análisis del transporte al desarrollo futuro del proyecto y, de ser necesario, una evaluación medioambiental en función de las necesidades identificadas y el acceso a la financiación. Se trata de un estudio inicial que servirá para orientar un futuro proyecto de diseño o construcción.

PARTICIPA

Se tendrá en cuenta los comentarios del público a fin de comprender mejor las potenciales inquietudes, preocupaciones, oportunidades y limitaciones. Para enviar comentarios, ver documentos y obtener más información sobre el estudio, visita:

www.yaquinalights.org/yaquina-head-traffic-study

Para obtener más información o enviar comentarios:

CARRIE WARREN Gestora de Proyectos FHWA carrie.warren@dot.gov 360-619-7658

ENCUESTA

Se está llevando a cabo una encuesta para recoger comentarios sobre las necesidades e inquietudes relativas al transporte en el ONA de Yaquina Head. La encuesta ayudará al equipo del estudio a identificar áreas de interés.

ESCANEAR PARA REALIZAR LA ENCUESTA

Responde a la encuesta hasta el 10 DE SEPTIEMBRE DE 2021

CONSIDERACIONES DEL ESTUDIO

El *Estudio del Tráfico de Yaquina Head* se centra en los aspectos del transporte del Área Natural Destacada. Se llevará a cabo un análisis de alto nivel del actual entorno ambiental, para identificar limitaciones ambientales que podrían afectar a potenciales recomendaciones sobre el transporte. En el estudio se evaluarán y considerarán los siguientes temas:

Circulación en el sitio

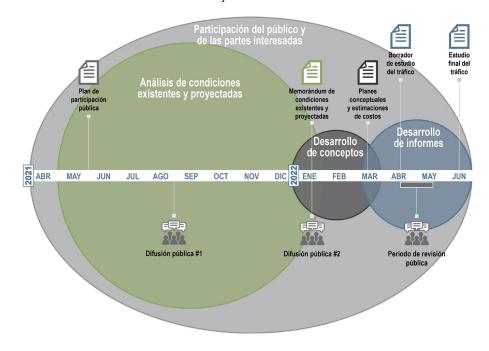

🖄 Instalaciones Multimodales (Peatones, Ciclistas, Tránsito)

- Estacionamiento
- Geometría e Infraestructura Vial
- Seguridad del Usuario
- Iniciativas de Planificación Anteriores y Normativa Aplicable

PROGRAMA

El *Estudio del Tráfico de Yaquina Head* comenzó en abril de 2021. La primera iniciativa de divulgación pública se lleva a cabo a lo largo del verano de 2021 y ayudará a orientar el desarrollo del estudio. En enero de 2022 se realizará una segunda iniciativa de divulgación pública, que coincidirá con la publicación del borrador de *Memorándum de Condiciones Existentes y Proyectadas*. Todo comentario se tomará en cuenta e incorporará, según corresponda, cuando el equipo del estudio pase a la fase de desarrollo del concepto. Se prevé que el borrador del estudio del tráfico esté terminado en abril de 2022. Tras un período de revisión por el público y las partes interesadas, se prevé que el Estudio definitivo del Tráfico esté terminado en junio de 2022.

135

El área natural destacada de Yaquina Head fue creada por el Congreso para fomentar la conservación y desarrollo de los valores paisajísticos, naturales e históricos de la zona; el uso continuado del área para la educación, estudios científicos y público esparcimiento; así como la protección del hábitat de la vida silvestre de la zona.

Appendix A3: Survey and Results

Introduction

The Federal Highway Administration (FHWA) and the Bureau of Land Management (BLM) have initiated a transportation study at Yaquina Head Outstanding Natural Area. This study will identify transportation improvements to better address user needs while considering public and stakeholder comments, environmental constraints, constructability challenges, and financial feasibility.

We want your feedback to help guide the study!

- Your responses to this survey will help the study team better understand user needs and concerns.
- The survey should take less than 10 minutes to complete.
- Your answers will remain anonymous. We do not require any identifying information and will not report individual responses.

For more information about the study, please visit the website (<u>https://www.yaquinalights.org/yaquina-head-traffic-study</u>) where you can learn about other opportunities to share your feedback. Thank you for your participation. The deadline to complete the survey is September 10, 2021.

Visitation Characteristics

1. During which seasons do you typically visit Yaquina Head Outstanding Natural Area? (Please select all that apply.)

| Spring | (March – | Mav) |
|--------|--------------|--------|
| Spring | (iviai cii – | iviay) |

Summer (June – August)

Fall (September – November)

Winter (December – February)

2. On which days do you typically visit Yaquina Head Outstanding Natural Area? (Please select all that apply.)

Weekdays

Weekends

Holidays

3. During what time period do you typically visit Yaquina Head Outstanding Natural Area? (Please select all that apply.)

Early morning (before 8 AM)

Morning (8 AM – 12 PM)

Afternoon (12 PM - 5 PM)

Evening (5 PM - sunset)

Late evening (after park hours)

4. How long do you typically spend at Yaquina Head Outstanding Natural Area? (Please select all that apply.)

| Less than an hour |
|-------------------|
| A few hours |
| Half day |
| Full day |

| | No, I typically visit by myself |
|------------|--|
| \bigcirc | Yes, with one other person |
| \bigcirc | Yes, with a larger group (including adults and/or children) |
| \bigcirc | Yes, with an organized group (such as a school trip) |
| \bigcirc | Other (please specify) |
| Γ | |
| | |
| 6 Wh | nich activities have you participated in during visits to Yaquina Head Outstanding Natural Area? (Plea |

Please provide any additional feedback about traffic, safety, and maintenance matters at Yaquina Head Outstanding Natural Area based on your experiences.

Parking Characteristics

15. On recent visits, did you park at the Interpretive Center Parking Lot?

- O Yes
- 🔵 No

16. If yes, how long did you park at the Interpretive Center Parking Lot?

- 0 to 30 minutes
- 30-60 minutes
- 1-2 hours
- More than 2 hours
- I did not park at the Interpretive Center Parking Lot

17. On recent visits, did you park at the Lighthouse Parking Lot?

- 🔵 Yes
- 🔵 No

18. If yes, how long did you park at the Lighthouse Parking Lot?

- 0 to 30 minutes
- 30-60 minutes
- 1-2 hours
- More than 2 hours
- I did not park at the Lighthouse Parking Lot

19. On recent visits, did you park at the Quarry Cove Parking Lot?

- 🔵 Yes
- 🔵 No

20. If yes, how long did you park at the Quarry Cove Parking Lot?

0 to 30 minutes

30-60 minutes

1-2 hours

More than 2 hours

I did not park at the Quarry Cove Parking Lot

21. Should the Yaquina Head Outstanding Natural Area provide additional parking designated for disabled individuals?

O Yes

🔵 No

22. If yes, where is additional parking for disabled individuals needed?

Demographics

| 23. | How | would | vou | describe | yourself? |
|-----|-----|-------|-----|----------|---|

Q9 How often do you use the following transportation modes when you visit the Yaquina Head Outstanding Natural Area?

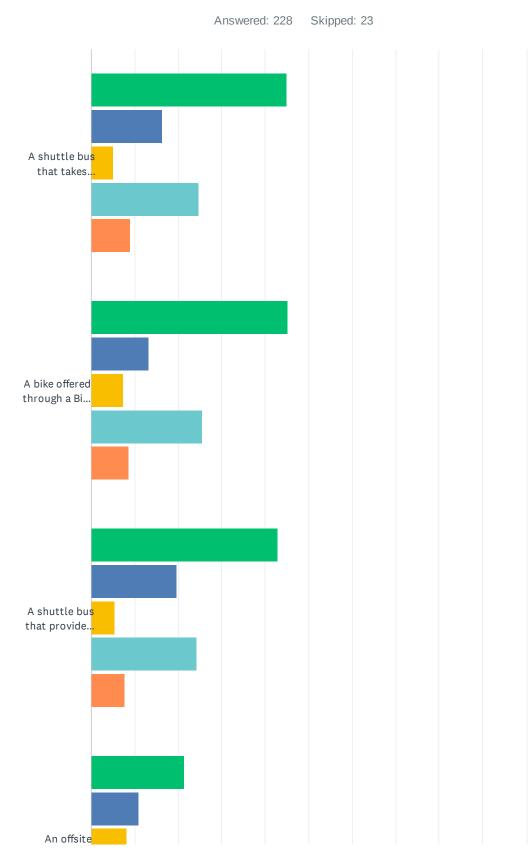

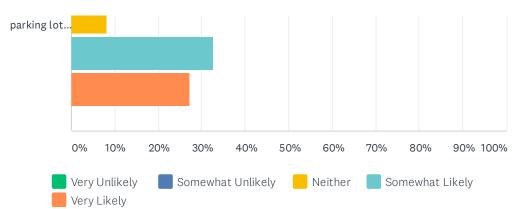

| | DAILY | WEEKLY | MONTHLY | YEARLY | NEVER | TOTAL |
|--|--------------|-------------|--------------|--------------|---------------|-------|
| Walking | 27.96% 59 | 9.48% 20 | 12.80% 27 | 29.38% 62 | 20.38% 43 | 211 |
| Wheelchair or mobility aid | 2.48% 4 | 0.00% 0 | 0.00% 0 | 1.24% 2 | 96.27% 155 | 161 |
| Bicycle | 0.00% 0 | 3.53% 6 | 7.06% 12 | 5.88% 10 | 83.53% 142 | 170 |
| Motorcycle | 0.00% 0 | 0.61% 1 | 1.21% 2 | 2.42% 4 | 95.76% 158 | 165 |
| Passenger vehicle (car/small pickup truck) | 23.83% 51 | 8.41% 18 | 14.95% 32 | 43.93% 94 | 8.88% 19 | 214 |
| RV or vehicle with trailer | 1.80% 3 | 0.00% 0 | 1.80% 3 | 7.19% 12 | 89.22% 149 | 167 |
| Tour/school bus | 0.00% 0 | 0.00% 0 | 0.00% 0 | 3.70% 6 | 96.30% 156 | 162 |

| # | OTHER (PLEASE SPECIFY) | DATE |
|---|---|--------------------|
| 1 | Always drive, hauling a glider on the roof rack | 8/24/2021 10:30 PM |
| 2 | One time trip | 8/22/2021 3:02 PM |
| 3 | Just retired without a doubt I will be there weekly | 8/19/2021 6:38 PM |
| 4 | I want to bicycle there more often but it is too dangerous on Hwy 101 | 8/18/2021 10:54 AM |

Q10 Below are alternative transportation options that could be offered at Yaquina Head Outstanding Natural Area in the future. Please tell us the likelihood that you would use each transportation option.

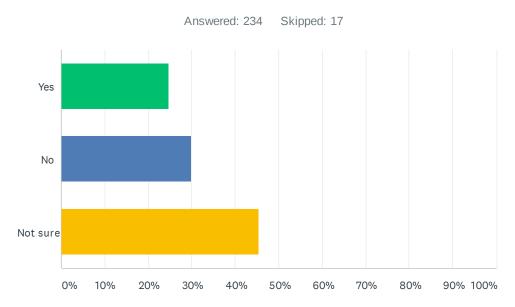

| | VERY UNLIKELY | SOMEWHAT UNLIKELY | NEITHER | SOMEWHAT LIKELY | VERY LIKELY | TOTAL |
|--|------------------|----------------------|-------------|--------------------|----------------|-------|
| A shuttle bus that takes passengers to different points at the site | 45.05% 100 | 16.22% 36 | 4.95% 11 | 24.77% 55 | 9.01% 20 | 222 |
| A bike offered through a Bike Share Program at the site | 45.21% 99 | 13.24% 29 | 7.31% 16 | 25.57% 56 | 8.68% 19 | 219 |
| A shuttle bus that provides a guided tour of the site | 42.92% 94 | 19.63% 43 | 5.48% 12 | 24.20% 53 | 7.76% 17 | 219 |
| An offsite parking lot that provides trail access for walking/hiking into the site | 21.27% 47 | 10.86% 24 | 8.14% 18 | 32.58% 72 | 27.15% 60 | 221 |

| # | SOME OTHER TRANSPORTATION OPTION (PLEASE SPECIFY) | DATE |
|---------------|--|---|
| 1 | Horse and buggy or old jalope car | 9/6/2021 8:26 AM |
| 2 | park our small pickup near gate to go paragliding (2 people) | 8/25/2021 1:51 PM |
| 3 | Golf carts ? For older people | 8/23/2021 9:51 PM |
| 4 | None of above because of COVID-19 | 8/23/2021 8:42 PM |
| 5 | EV charging needed at Visitor Center | 8/23/2021 6:17 PM |
| 6 | Inlet and outlet multimodal access points on north and east perimeter | 8/23/2021 5:42 PM |
| 7 | no cars past interpretive center except for disabled | 8/23/2021 3:47 PM |
| 8 | limit the amount of cars going through at any given time / change to reservation based system for entry | 8/19/2021 6:32 PM |
| 9 | bike/ped trails | 8/18/2021 10:54 AM |
| 10 | I wouldn't use a parking lot because I live here but a parking area is desperately needed!! | 8/16/2021 5:55 PM |
| 11 | Not having to wait in line at the Fee Booth—I have an annual pass. | 8/15/2021 3:50 PM |
| 12 | Only allow parking at the visitor center, shuttle to lighthouse | 8/14/2021 11:46 AM |
| 9 10 11 | limit the amount of cars going through at any given time / change to reservation based system for entry bike/ped trails I wouldn't use a parking lot because I live here but a parking area is desperately needed!! Not having to wait in line at the Fee Booth—I have an annual pass. | 8/19/2021 6:32 PM 8/18/2021 10:54 AM 8/16/2021 5:55 PM 8/15/2021 3:50 PM |

Q11 If alternative transportation were offered at Yaquina Head Outstanding Natural Area, would it enhance your experience?

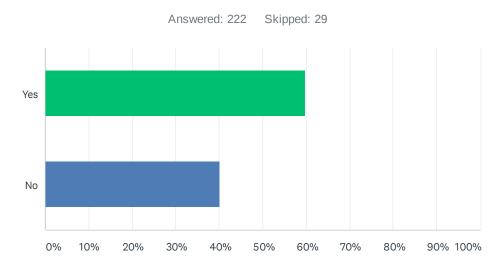

| ANSWER CHOICES | RESPONSES | |
|----------------|-----------|-----|
| Yes | 24.79% | 58 |
| No | 29.91% | 70 |
| Not sure | 45.30% | 106 |
| TOTAL | | 234 |

| # | PLEASE SHARE ANY ADDITIONAL FEEDBACK REGARDING ALTERNATIVE TRANSPORTATION OPTIONS. | DATE |
|----|---|--------------------|
| 1 | Clse site to all cars | 9/6/2021 8:26 AM |
| 2 | would depend on the details, but interested to hear about concepts | 9/5/2021 12:46 PM |
| 3 | A sidewalk or trail to walk in would be great | 9/4/2021 2:35 PM |
| 4 | I am semi-disabled, it would be great to have a transportation option that would take me down to cobble beach as it is very difficult to go up and down the stairs | 9/1/2021 2:00 AM |
| 5 | Mark a northern hiking/biking entrance | 8/29/2021 5:07 PM |
| 6 | It's nice to set in my car and watch the wildlife. But, the Oregon coast is discovered and options have to be reviewed. | 8/29/2021 11:54 AM |
| 7 | We visit from out-of- state via auto which is also our mode to site | 8/29/2021 9:16 AM |
| 8 | At gate need a lane for seniors with passes. Next, parking is the issue. Ecologist need to be prioritized for access including retired ones. On weekends or at least once a week walking in should be the only way to access to give the area a break from people loving it to death. | 8/28/2021 7:53 PM |
| 9 | A safe bike route would make me rethink driving. If possible besides safe it would also be accessible from north of the site toward Depoe Bay and south toward Newport. The current Oregon coastal bike route isn't safe. | 8/28/2021 7:00 PM |
| 10 | I would favor a shuttle service if it decreased personal automobile traffic density on Lighthouse Drive. | 8/28/2021 5:11 PM |
| | | |

| 11 | We found it easy to drive to and park at sites we wanted to see. | 8/27/2021 11:11 AM |
|----|---|--------------------|
| 12 | Yes yes yes! Close as much road as possible, use shuttles. Last year's road closure from Interpretive Center to lighthouse greatly enhanced the visitor experience for those who walked!! | 8/26/2021 3:39 PM |
| 13 | would need room for paragliding equipment and a stop near the PG area | 8/25/2021 1:51 PM |
| 14 | Only if the shuttle had a hang glider rack! (not likely!) | 8/24/2021 10:30 PM |
| 15 | stricter enforcement of speeding cars & slower speed limits - VERY IMPORTANT FOR WALKING VISITORS | 8/23/2021 3:47 PM |
| 16 | I do enjoy the walk to the lighthouse. I would hope that if a tour bus was offered, access to walking or biking would still be an option. | 8/23/2021 9:59 AM |
| 17 | When I go hang gliding at Yaquina Head I bring my equiment in on my car, if others come with me to fly we consolidate into one car. We park near the gate by the road up to Communications Hill and manually bring our equipment to launch, then retrieve the vehichle after flying. | 8/22/2021 2:08 PM |
| 18 | What would the options be of where I could exit & re-enter the alternative transportation? | 8/22/2021 12:08 AM |
| 19 | Go to reservation based system for car usuage. Keep vehicle traffic open in the winter when less tourists are there. | 8/19/2021 6:32 PM |
| 20 | We appreciated the way the Grand Canyon park operated with frequent shuttles inside the park from a central location. The distances between viewpoints or trails was fairly short. I'm not sure a shuttle between Oregon Coast parks would be practical. If just for Yaquina Head then not likely a big benefit. We always have found parking - never been turned away for this reason. However, if the number of visitors is growing then I welcome an alternative for parking and would use a shuttle from a satellite parking lot. | 8/19/2021 12:24 PM |
| 21 | Right now I can walk & so prefer to do so, if as I age I can't walk far, I'd be interested in a shuttle bus. | 8/18/2021 12:52 PM |
| 22 | (1) ADA MULTI-USE PATHS. (2) vehicular access to Visitor Center only. Other roads for service, emergency, transit and ADA tagged vehicles ONLY. | 8/18/2021 10:54 AM |
| 23 | I would love to see a shuttle bus system started | 8/18/2021 8:17 AM |
| 24 | I live in the neighborhood, so I always walk in. What would enhance my experience is a wider and safer pedestrian zone along the road starting at Highway 101 until the pedestrian trail starts across from communication hill. There also needs to be clearer speed limit signs on that road. People drive really fast on that little stretch between the highway and the kiosk. There should be signs that are 15 mph as well as speed bumps. | 8/17/2021 7:57 PM |
| 25 | less.vehicles on the road racing from feature to feature would feel safer as a walker | 8/17/2021 10:14 AM |
| 26 | I currently park down by the Cafe for sale — the empty parking lot and walk in | 8/15/2021 10:11 AM |
| 27 | But open to it | 8/14/2021 6:48 PM |
| 28 | Don't know if it's worth the money | 8/14/2021 2:19 PM |
| 29 | It is nice with limited cars. Walking the roads is a great experience with the views | 8/14/2021 8:22 AM |
| 30 | Reducing traffic is very important to experiencing this site | 9/14/2021 9:21 414 |
| 30 | Reducing traine is very important to experiencing this site | 8/14/2021 8:21 AM |

Q12 Should the Yaquina Head Outstanding Natural Area provide charging stations for electric vehicles?

| ANSWER CHOICES | RESPONSES | |
|----------------|-----------|-----|
| Yes | 59.91% | 133 |
| No | 40.09% | 89 |
| TOTAL | | 222 |

Q13 If yes, where should electric vehicle charging stations be located?

Answered: 114 Skipped: 137

| # | PLEASE PROVIDE ANY ADDITIONAL FEEDBACK ABOUT TRAFFIC, SAFETY, AND MAINTENANCE MATTERS AT YAQUINA HEAD OUTSTANDING NATURAL AREA BASED ON YOUR EXPERIENCES. | DATE |
|----|--|--------------------|
| 1 | crosswalks could be better signed/marked, could also be more crosswalks | 9/5/2021 12:47 PM |
| 2 | It needs a larger parking area at the lighthoyse, or a shuttle to and from the lighthouse and interpretive center | 9/1/2021 2:02 AM |
| 3 | As a paraglider pilot, we would like to continue to be able to park by the gate to the launch. Nobody else parks there, it doesn't impede traffic, it's out of the way and everyone's happy that way. | 8/30/2021 12:46 AM |
| 4 | More than one lane to pay and a bypass lane for annual pass holders would speed up the entrance process. | 8/29/2021 6:54 PM |
| 5 | Entrance to first trailhead is most dangerous for walking & biking | 8/29/2021 5:11 PM |
| 6 | See my prior comments. But priority is to maintain and enhance nature. People access is secondary and should be periodically restricted to walking in. | 8/28/2021 7:58 PM |
| 7 | Site should/could be reimagined as a biking/hiking/walking destination or as part of a recreational waypoint. | 8/28/2021 7:02 PM |
| 8 | Area near the entry kiosk is very dangerous to walkers. Dedicated pedestrian paths completely separate from street traffic would be very helpful. | 8/28/2021 5:13 PM |
| 9 | Speed is too high on the roads coming in - there are many walkers on the main road and dropping the speed to 15 mph in the park would greatly enhance safety of pedestrians. Consider only having handicapped parking at the lighthouse with a shuttle for others? | 8/26/2021 8:08 PM |
| 10 | Very poor noted above is related to the speed visitors are driving. We have had several close | 8/26/2021 3:50 PM |

| | calls from speeding cars that don't move over. Speed is a major issue! | |
|----|--|--------------------|
| 11 | Parking by the Communications Hill trail entry is desirable, since we're hauling heavy gliders out to launch. | 8/24/2021 10:32 PM |
| 2 | Might be nice to have a pullout parking area near the garden so you don't have to cross the street | 8/24/2021 1:05 PM |
| 3 | it's soooo nice when cars/trucks are restrictedi.e when site is closed or as it was at pandemics and families walked the roads | 8/23/2021 3:52 PM |
| 4 | Yaquina Head is a wonderful place. The addition of the entrance gate and interpretive center have substantially added to traffic congestion at this site. The congestion is mostly seasonal in nature and is worst during the summer months based on my experience, although there can also be issues during holidays and school holiday periods. | 8/22/2021 2:14 PM |
| 5 | No need for crazy directions at big lot. Just eliminate parking further on. Actually I preferred it when everyone had to walk in last summer. Much more of a natural area experience. | 8/22/2021 1:52 PM |
| 6 | I don't like being forced to go into the Interpretive center when I just want to go to the lighthouse parking | 8/21/2021 2:03 PM |
| 7 | most pedistrians are safe and follow rules, but occassionally there will be people that are not paying attention and will step out into traffic. If there could be a railing or something along the pedestrian walkways on the street to keep them inside the railing that would help. | 8/19/2021 6:34 PM |
| 8 | The entry station is frequently backed up, need to add lane for pass holders at busy times | 8/19/2021 3:28 PM |
| 19 | As a person who accesses the head multiple times a day when the conditions warrant, the gate house is a bummer, and the gate hours are worse - the access to quarry cove should be dawn to an hour after sunset, or, better yet, unrestricted, moving the gate just past the quarry cove road. | 8/19/2021 2:50 PM |
| 20 | Well organized and maintained. That last step at the tide pools could be improved. | 8/19/2021 12:26 PM |
| 21 | I wish there was a better walking path from the parking near 101to the entrance gates | 8/18/2021 6:20 PM |
| 22 | Cars need to slow down going into the park and coming out of the park | 8/18/2021 5:38 PM |
| 23 | I love having the flexibility to walk in and also sometimes not to. It's an amazing site traffic is rarely a real issue compared to other places. | 8/18/2021 4:04 PM |
| 24 | I really enjoyed walking into & around YH when it was closed to motor vehicles and even when people could drive to the interpretative/visitors center but then had to walk to the lighthouse, Cobble Beach, etc. You could really hear all the bird calls, etc. instead of having them partially drowned out by motor vehicle noise. Ditto plane noise, much less during the state shut down | 8/18/2021 12:54 PM |
| 25 | Vehicles do not drive at posted speeds. Don't even slow down for pedestrians. | 8/18/2021 12:09 PM |
| 6 | more parking needed, shuttle bus could be good | 8/18/2021 11:15 AM |
| 27 | Eliminate all but Interpretive Center Parking. Make more, or ADA-improve, offroad multi-use paths. | 8/18/2021 10:58 AM |
| 28 | I am concerned about the new barriers that have been installed by the lighthouse on the side of the Murre colony. I see children climbing and standing on them and running out in front into the open area. These barriers are much more easily climbed than the previous ones. | 8/17/2021 7:59 PM |
| 29 | The entrance needs a separate lane for people who already have a pass | 8/17/2021 4:12 PM |
| 80 | I walk regularly and many many vehicles are exceeding the posted speed limits. I would recommend periodic law enforcement traffic enforcement | 8/17/2021 2:09 PM |
| 31 | Need two gates going in. I have a pass and must often wait 10 minutes or more during tourist season . | 8/17/2021 1:34 PM |
| 32 | speed bumps need to slow traffic | 8/17/2021 10:15 AM |
| 33 | Pedestrians are required to share road with vehicles throughout most of the park; these vehicles, speed, park improperly, and do not offer proper safety distance. In addition, the park staff do NOT do anything to make it safer. In fact, many of the staff also speed, drive too | 8/16/2021 11:53 AM |

Yaquina Head Public Outreach

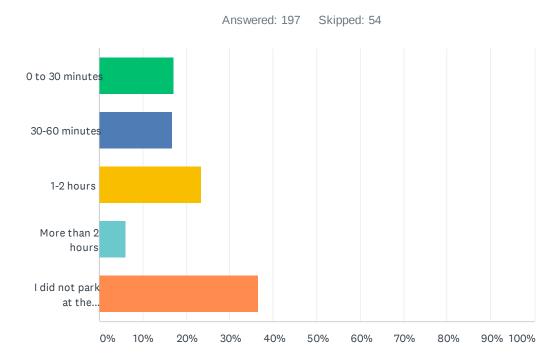

| | close to pedestrians. Lack of proper maintenance on roads and trails make speed limit signs difficult to see, and weeds impede trails and make roads narrower. | |
|----|--|--------------------|
| 34 | NO enforcement of RV only parking near the lighthouse. Plus add signs in front so that people can NOT use the excuse they did not see "RV" on pavement | 8/16/2021 9:41 AM |
| 35 | Drivers speed into and out of the park at speeds much higher than 25 MPH! I've seen pedestrians almost get hit in the crosswalk from Communications Hill to the Oceanside trail (very dangerous because vehicles come speeding around the corner right before this crosswalk. Also, pedestrians walking on the edge of the road have no safety buffer and speeding vehicles don't see the pedestrians until they have rounded corners. It's a miracle that no pedestrians have been injured or killed by speeding vehicles at this site! | 8/15/2021 3:58 PM |
| 36 | Only been twice. I was there when tide was high so not sure about heavier traffic. Though visited both times during weekend | 8/14/2021 6:50 PM |
| 37 | The main parking issue is at the lighthouse. A small bus from the center to the lighthouse would work well for people but I would rather walk or ride a bike. I really like the bike idea | 8/14/2021 5:59 PM |
| 38 | I thought the cones blocking the lighthouse on the road were unnecessary and implied the parking at lighthouse was closed. I just wanted to visit lighthouse so this was confusing when I realized the parking lot was actually open. | 8/14/2021 2:21 PM |
| 39 | Entrance gate update for pass holders | 8/14/2021 11:44 AM |
| 40 | Thank you | 8/14/2021 11:22 AM |
| 41 | Less car access, more walking access | 8/14/2021 8:23 AM |
| 42 | On busy days lighthouse parking area is very unsafe for pedestrians | 8/14/2021 8:23 AM |
| 43 | A sidewalk area along the road would be much safer for pedestrians than walking on the road itself. | 8/11/2021 6:17 PM |

Q15 On recent visits, did you park at the Interpretive Center Parking Lot?

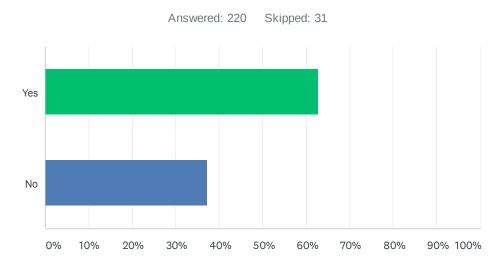

| ANSWER CHOICES | RESPONSES | |
|----------------|-----------|-----|
| Yes | 53.39% | 118 |
| No | 46.61% | 103 |
| TOTAL | | 221 |

Q16 If yes, how long did you park at the Interpretive Center Parking Lot?

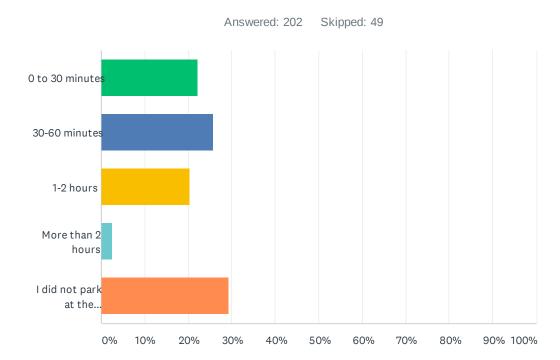

| ANSWER CHOICES | RESPONSES | |
|---|-----------|-----|
| 0 to 30 minutes | 17.26% | 34 |
| 30-60 minutes | 16.75% | 33 |
| 1-2 hours | 23.35% | 46 |
| More than 2 hours | 6.09% | 12 |

Q26 Do you have any suggestions that would help improve the transportation experience at Yaquina Head Outstanding Natural Area?

Answered: 69 Skipped: 182

| # | RESPONSES | DATE |
|----|---|--------------------|
| 1 | Extra lane at entrance station - pass users can bypass the line | 9/7/2021 5:14 PM |
| 2 | Reservations? | 9/6/2021 8:29 AM |
| 3 | Na | 9/6/2021 2:18 AM |
| 4 | not at this time | 9/5/2021 12:48 PM |
| 5 | No | 9/4/2021 3:53 PM |
| 6 | Sidewalks for pedestrians | 9/4/2021 2:38 PM |
| 7 | N/A | 9/1/2021 1:07 PM |
| 8 | No | 9/1/2021 2:04 AM |
| 9 | Very nice place to visit | 8/31/2021 11:29 PM |
| 10 | Please, no shuttle. | 8/30/2021 12:48 AM |
| 11 | Display count of available lighthouse parking spots at visitor center entrance | 8/29/2021 5:19 PM |
| 12 | Hey have such a long stupid line to pay. Let me get to the self pay without waiting for stupid chit chat w ranger. why is there a cone line up suggesting I can't drive to lighthouse when I can, indeed drive out to light house no problem? Dumb and useless. | 8/29/2021 3:32 PM |
| 13 | At first, we pulled into the interpretive center parking lot. If it had been clearer that trail access is available to the lighthouse, we would have probably parked and walked. Better signage for lighthouse at the interp. center could help keep the upper parking free for disabled users. Rather than building new parking (which I doubt is the plan), restripe upper parking lot spaces for disabled parking as needed! | 8/29/2021 1:22 PM |
| 14 | Already provided | 8/28/2021 7:05 PM |
| 15 | speed bumps/rumble strips to slow down cars. Better signage to keep RV parking spaces open for RV use. | 8/28/2021 5:18 PM |
| 16 | Better signage at crosswalks; 'Lighthouse Lot Full' sign at interpretive center | 8/27/2021 8:39 PM |
| 17 | Approved parking location outside the park for people to walk into the park for when parking in the park is full. | 8/27/2021 10:59 AM |
| 18 | A stop sign for a 3-way stop at quarry cove intersection to slow cars entering the park. Speed bumps at key locations. Flashing lighted signs to tell speeders to slow down. | 8/26/2021 4:16 PM |
| 19 | I would like to see a capacity limit for vehicles and to limit driving access to the actual lighthouse to the interpretive parkinglot. Meaning, not allow cars passed the interpretive center. Add walking lanes all along the road to the lighthouse and slow down the speed of vehicles driving through. | 8/26/2021 3:46 PM |
| 20 | No suggestions, you are doing a good job | 8/26/2021 11:39 AM |
| 21 | Trails and more options | 8/24/2021 6:11 PM |
| 22 | It would be nice to have an express lane or something that allows those who already have passes to go on through the gate and not have to wait behind those who are purchasing passes. | 8/24/2021 1:09 PM |
| 23 | Paint fog lines and crack seal Lighthouse Drive | 8/23/2021 6:19 PM |

Yaquina Head Public Outreach

| 24 | better multimodal transportation access points | 8/23/2021 5:45 PM |
|----|---|--------------------|
| 25 | widen walking paths on roads for safety of pedestrians and enforce speeding carsmaybe some speed bumps | 8/23/2021 4:01 PM |
| 26 | Talk to local pilot Greg Krutzikowsky to improve HG/PG access. | 8/22/2021 8:17 PM |
| 27 | Although I would not likely use it, there may be some benefits of public transportation to and within YHONA. But that may entail creating outside parking areas that would likely be costly, create more pavement, and associated environmental problems. If there is a problem with too many vehichles at one time at YHONA, it would be best to alert people trying to get in well before they get anywhere near the entrance gate since turning around anywhere near there is problematic for a number of reasons. | 8/22/2021 2:26 PM |
| 28 | Don't mix pedestrians and vehicles. Fix congestion at pay station | 8/22/2021 1:56 PM |
| 29 | Have the open house well publicized beforehand. | 8/22/2021 12:13 AM |
| 30 | timed entry (reservations) for vehicle access in peak months | 8/19/2021 6:37 PM |
| 31 | Pass holder lane at entry and possibly shuttle bus for busy times | 8/19/2021 3:31 PM |
| 32 | I already spelled it out. | 8/19/2021 2:52 PM |
| 33 | Two lane entrance - one for automated pay and one for the ranger staffed window. It does get backed up so the two lanes need to start 100 yards from the entrance station. | 8/19/2021 12:30 PM |
| 34 | No | 8/18/2021 8:58 PM |
| 35 | Encourage more people to walk in. | 8/18/2021 8:13 PM |
| 36 | Again better paths along lighthouse road from 101 to the entrance gates | 8/18/2021 6:22 PM |
| 37 | With the interpretive center still being closed due to it being a Federal Building subject to Covid Shutdowns, and given that I read a sign in the restroom at Yaquina Head this morning stating that the restrooms are not being cleaned according to OHA guidelines, I don't understand why there is a want or need for additional parking. | 8/18/2021 2:00 PM |
| 38 | Road improvements from 101 to the park entrance | 8/18/2021 1:30 PM |
| 39 | provide an entry lane for visitors with passes | 8/18/2021 1:24 PM |
| 40 | Limit small aircraft overflights, ban drone use over YH. Protect the birds and seals from all the self-absorbed jerks flying their drones & small planes & helicopters and ENFORCE the rules instead of having signs that say, dogs on leash and ignoring dogs in Quarry Cove who are most definitely NOT leashed. | 8/18/2021 1:01 PM |
| 41 | Better speed control. Law enforcement presence. | 8/18/2021 1:01 PM |
| 42 | additional parking near SR 101 with trail to lighthouse. It's a short walk and would be utilized if promoted, perhaps no fee entry | 8/18/2021 11:17 AM |
| 43 | Eliminate all but I.C. parking lot. Make more and improve ADA multi-use paths. EV charger at entry. | 8/18/2021 11:02 AM |
| 44 | Mandatory shuttle | 8/18/2021 8:19 AM |
| 45 | Improve the pedestrian options for people walking into the Yaquina Head Outstanding Natural Area. | 8/17/2021 9:59 PM |
| 46 | Traffic calming, pedestrian safety, bicycle safety | 8/17/2021 8:01 PM |
| 47 | Improve bottleneck at fee station | 8/17/2021 3:59 PM |
| 48 | No | 8/17/2021 3:34 PM |
| 49 | No. We found it easy and efficient | 8/17/2021 1:50 PM |
| 50 | bike lane, on busy days hellcat the Kiosk so traffic doesn't back up so far | 8/17/2021 10:17 AM |
| | | |
| 51 | No | 8/16/2021 8:30 PM |

Yaquina Head Public Outreach

| 53 | The road leading into the park needs a pedestrian path desperately! And a few places in the park could use a designated walking path. | 8/16/2021 6:04 PM |
|----|---|--------------------|
| 54 | We need staff to enforce speed limits and parking restrictions. We need speed bumps/dugouts that would slow down traffic, especially on blind curves. A railing needs to be provided between vehicle and pedestrian traffic throughout the park from intersection of lighthouse with Coast highway. speed limit signs highly visible and posted at beginning at intersection at coast highway. Posting hours and fees at intersection would also limit turn around traffic. | 8/16/2021 12:03 PM |
| 55 | Enforce RV only parking near lighthouse | 8/16/2021 9:48 AM |
| 56 | Remove the fee booth. Hire an entry-level, BLM, law enforcement officer to write tickets for speeding and/or not displaying a pass on the dashboard. The officer could work on the busiest days of the week: Fri-Tue. Visitors would need to come into the Visitor Center to buy daily passes—this would increase sales at the gift shop. Parking at the lighthouse would be limited to vehicles with disabled placards, school busses, and tour busses. For those who don't want to make the 1/3 mile walk to the lighthouse, an electric shuttle bus could depart every 15 minutes from the Visitor Parking Lot for an additional fee of \$2. | 8/15/2021 4:11 PM |
| 57 | Just trying to keep motorists' speeds down and making them aware there are pedestrians | 8/15/2021 10:13 AM |
| 58 | No | 8/15/2021 9:46 AM |
| 59 | I love the area especially the quarry at low tide. There are silly people often at the quarry cove climbing the rocks and thinking to swim with the seals. Having a volunteer here would be nice | 8/14/2021 6:04 PM |
| 60 | Take away the cones blocking road to lighthouse. Or at least add a sign indicating that lot is still open. | 8/14/2021 2:23 PM |
| 61 | Speed bumps. 15 mph everywhere | 8/14/2021 12:21 PM |
| 62 | Speed bumps | 8/14/2021 11:58 AM |
| 63 | Limit cars | 8/14/2021 11:48 AM |
| 64 | Nope | 8/14/2021 10:59 AM |
| 65 | No | 8/14/2021 10:17 AM |
| 66 | none | 8/14/2021 9:00 AM |
| 67 | More walking access or promoted more | 8/14/2021 8:24 AM |
| 68 | Charging access for electric bicycles. | 8/13/2021 4:15 PM |
| 69 | More signage indicating fee requirement before entrance station. Turn-around option for vehicles before entrance station. Sidewalk along road leading into and throughout park. Guard rail or railing fence along potential sidewalk to protect pedestrians. Speed detecting speed limit signs. Greater law enforcement presence within park. | 8/11/2021 6:32 PM |

Q27 Please share any additional feedback that may be helpful to the study team.

Yaquina Head Public Outreach

| | should reflect that, this is not "one size fits all use" | |
|----|---|--------------------|
| 26 | I think the popularity of the site will continue to increase. | 8/19/2021 3:31 PM |
| 27 | See previous long answer. | 8/19/2021 2:52 PM |
| 28 | I think there is adequate shoulder room on both sides for bikes and pedestrians. | 8/19/2021 12:30 PM |
| 29 | We really hoped to go inside the lighthouse but it was not open! | 8/18/2021 8:58 PM |
| 30 | Yaquina Head already has 3 large parking areas that I've never seen full. I would like to see the money being appropriated for additional parking to be used instead on making sure the bathrooms are clean and sanitary during this pandemic. Thank you. | 8/18/2021 2:00 PM |
| 31 | sidewalks are needed on both sides of roads | 8/18/2021 1:24 PM |
| 32 | No consideration of the noise of motor vehicles in this study but noise is pollution. As I said, I was amazed at how much nicer it was at YH during the time people couldn't drive in at all or could drive only to the "interpretative center." No exhaust smells, no motor vehicle noise, (lots of loud motor cycles and diesel pickups), how much easier it was to enjoy all the bird sounds. And I've had to be very careful when cross the main road when going from the pedestrian path to the gravel road to Communication Ridge. I don't see much regard for pedestrian or cycling safety or comfort in any of the questions in this "transportation plan" Why are only motorized vehicles important? And if there's a shuttle bus it should be electric or powered by natural gas. | 8/18/2021 1:01 PM |
| 33 | Minimize vehicular access to (1) improve the bike/ped experience (2) protect shoreline and tidepools | 8/18/2021 11:02 AM |
| 34 | Thanks for asking! | 8/17/2021 8:01 PM |
| 35 | None | 8/17/2021 3:34 PM |
| 36 | None | 8/16/2021 8:30 PM |
| 37 | Overall electric vehicle stations and diabluty access should be the focus on improvement | 8/16/2021 6:40 PM |
| 38 | Again just a pedestrian and maybe bike path would be helpful. I nearly got hit by a FedX truck one day. | 8/16/2021 6:04 PM |
| 39 | Someone that give a tour of the area would be nice | 8/16/2021 1:16 PM |
| 40 | If you post RV parking signs, speed limits-enforce those rules! | 8/16/2021 12:03 PM |
| 41 | The entrance line up clogged many times. This year we did not see the second line open at entrance. Also, be helpful to have enlarged/widened entrance (two lanes for entry) and passholders/staff/volunteer entry | 8/16/2021 9:48 AM |
| 42 | Would be nice if walking path distances were labeled on the map. Would make walking more incentivised imo as distances on current map were tough to judge | 8/15/2021 7:06 PM |
| 43 | Removing pedestrians from the roadway should be of highest concern. Maybe also run a shuttle bus from the Ernest Bloch Wayside? | 8/15/2021 4:11 PM |
| 44 | I think you all are doing a great job with resources you have. Perhaps another hiking trail- but I like hike so maybe not a priority. Thanks! | 8/14/2021 6:04 PM |
| 45 | Na | 8/14/2021 10:59 AM |
| 46 | No | 8/14/2021 10:17 AM |

INTRODUCCIÓN

La Administración Federal de Carreteras (FHWA) y la Oficina de Gestión Territorial (BLM) han iniciado un estudio sobre el transporte en el Área Natural Destacada (ONA) de Yaquina Head. Este estudio identificará mejoras en el transporte para un mejor abordaje de las necesidades de los usuarios, teniendo en cuenta los comentarios del público y de las partes interesadas, limitaciones medioambientales, desafíos constructivos y viabilidad financiera.

¡Queremos que tus aportes ayuden a orientar el estudio!

- Tus respuestas a esta encuesta ayudarán al equipo del estudio a entender mejor las necesidades y preocupaciones de los usuarios.
- La encuesta debería poderse completar en menos de 10 minutos.
- Tus respuestas serán anónimas. No necesitamos ningún dato identificativo, y no divulgaremos ninguna respuesta individual.

Para más información sobre el estudio, visita el sitio web (<u>https://www.yaquinalights.org/yaquina-head-traffic-study</u>) donde hallarás más información sobre otras oportunidades para realizar comentarios. Gracias por tu participación. El plazo para completar la encuesta es el 10 de septiembre de 2021.

Visitation Characteristics

1. ¿Durante qué temporadas sueles visitar el Área Natural Destacada de Yaquina Head? (Selecciona todo lo que corresponda).

Primavera (marzo - mayo)

Verano (junio - agosto)

Otoño (septiembre - noviembre)

Invierno (diciembre - febrero)

2. ¿En qué días visitas normalmente el Área Natural Destacada de Yaquina Head? (Selecciona todo lo que corresponda).

Días laborables

Fines de semana

Días festivos

3. ¿Durante qué período sueles visitar el Área Natural Destacada de Yaquina Head? (Selecciona todo lo que corresponda).

Temprano en la mañana (antes de las 8:00 am)

Mañana (8 am - 12 pm)

Tarde (12 pm - 5 pm)

Tarde (5 pm - anochecer)

Tarde por la noche (fuera del horario del parque)

4. ¿Cuánto tiempo pasas normalmente en el Área Natural Destacada de Yaquina Head? (Selecciona todo lo que corresponda).

Menos de una hora

Unas pocas horas

Medio día

Día completo

| \bigcirc | No, típicamente lo visito yo solo |
|------------|--|

CARACTERÍSTICAS DE TRANSPORTE

8. ¿Cómo accedes normalmente al Área Natural Destacada de Yaquina Head? (Selecciona todo lo que corresponda).

| Caminata |
|--|
| Silla de ruedas o medios auxiliares de movilidad |
| Bicicleta |
| Motocicleta |
| Vehículo de pasajeros (auto/camioneta pequeña) |
| Vehículo recreativo (RV) o vehículo con remolque |
| Autobús turístico/escolar |
| Otra (especifique) |
| |

9. ¿Con qué frecuencia utilizas los siguientes métodos de transporte dentro del Área Natural Destacada de Yaquina Head?

| | Diariamente | Semanalmente | Mensualmente | Anualmente | Nunca |
|--|-------------|--------------|--------------|------------|------------|
| Caminata | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc |
| Silla de ruedas o medios auxiliares de movilidad | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc |

| | | | | | |
| | | | | | |

10. A continuación se muestran métodos de transporte alternativos que se podrían ofrecer en el Área Natural Destacada de Yaquina Head en el futuro. Indícanos la probabilidad de que utilices cada método de transporte.

| | Muy Improbable | Algo Improbable | Ni una ni otra | Algo Probable | Muy Probable |
|---|-------------------|--------------------|-------------------|------------------|-----------------|
| Un autobús colectivo lleve a los pasajeros a diferentes puntos del sitio | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc |
| Una bicicleta que se ofrezca en el sitio a través de un programa «Bike Share» | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc |
| Un autobús colectivo que ofrezca una visita guiada por el sitio | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc |
| Un estacionamiento fuera de las instalaciones que proporcione acceso a senderos para paseos/excursiones en el sitio | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc |
| Otro método de transporte (especifique) | | | | | |
| | | | | | |

11. Si se ofreciera transporte alternativo en el Área Natural Destacada de Yaquina Head, ¿mejoraría ello tu experiencia?

🔵 Sí

🔵 No

No estoy seguro

Añade cualquier comentario adicional sobre métodos de transporte alternativos.

12. ¿Debería proporcionar el Área Natural Destacada de Yaquina Head estaciones de carga para vehículos eléctricos?

🔵 Sí

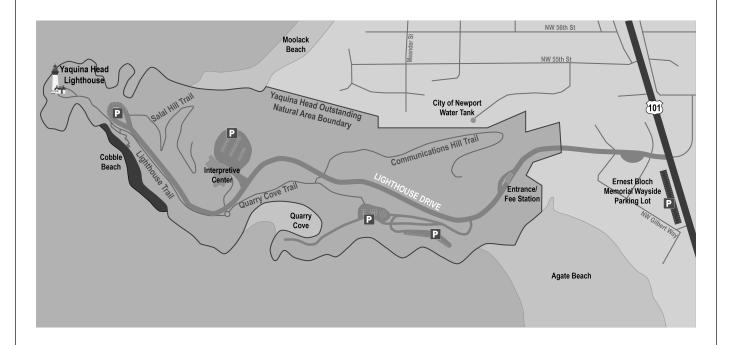

🔵 No

13. En caso afirmativo, ¿dónde deberían ubicarse las estaciones de recarga de vehículos eléctricos?

CARACTERÍSTICAS DEL SITIO

Mapa del Sitio del Área Natural Destacada de Yaquina Head

14. Califica las siguientes cuestiones relativas al tráfico, seguridad y mantenimiento en el Área Natural Destacada de Yaquina Head en base a tus experiencias. (Consulta el mapa del sitio.)

| | Muy pobre | Pobre | Neutro | Bueno | Muy Bueno | N/A |
|---|------------|------------|------------|------------|------------|------------|
| Operaciones en la puerta de acceso | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc |
| Circulación general en el sitio | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc |
| Accesibilidad general del sitio | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc |
| Estado general de la banqueta | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc |
| Senderos/caminos peatonales | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc |

| Seguridad de los vehículos | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc | \bigcirc |

Añade comentarios adicionales sobre cuestiones relativas al tráfico, seguridad y mantenimiento en el Área Natural Destacada de Yaquina Head en base a tus experiencias.

CARACTERÍSTICAS DE ESTACIONAMIENTO

| 15. En visitas recientes, ¿usaste el estacionamiento del Centro de Interpretación? |
|--|
| ⊖ Sí |
| No |
| |
| 16. En caso afirmativo, ¿por cuánto tiempo usaste el estacionamiento del Centro de Interpretación? |
| 0 a 30 minutos |
| 30-60 minutos |
| 1-2 horas |
| Más de 2 horas |
| No usé el estacionamiento del Centro de Interpretación |
| |
| 17. En visitas recientes, ¿usaste el estacionamiento del Faro? |
| ◯ Sí |
| No |
| |
| 18. En caso afirmativo, ¿por cuánto tiempo usaste el estacionamiento del Faro? |
| 0 a 30 minutos |
| 30-60 minutos |
| 1-2 horas |
| Más de 2 horas |
| No usé el Estacionamiento del Faro |
| |
| 19. En visitas recientes, ¿usaste el estacionamiento de Quarry Cove? |
| ◯ Sí |
| ○ No |
| |

20. En caso afirmativo, ¿por cuánto tiempo usaste el estacionamiento de Quarry Cove?

0 a 30 minutos

30-60 minutos

🔵 1-2 horas

Más de 2 horas

No usé el estacionamiento de Quarry Cove

21. ¿Debería el Área Natural Destacada de Yaquina Head proporcionar estacionamiento adicional para personas con discapacidad?

🔵 Sí

🔵 No

22. En caso afirmativo, ¿dónde se necesita estacionamiento adicional para personas con discapacidad?

DEMOGRAFÍA

| 23. ¿Cómo | te | describirías? |
|-----------|----|---------------|
|-----------|----|---------------|

- Visitante por primera vez
- Visitante poco frecuente
- Visitante frecuente
- Miembro del personal/voluntario

24. Selecciona tu grupo de edad.

- Menor de 18
- 19-34
- 35-50
- 51-64
- 65+
- Prefiero no especificar

25. ¿Dónde vives?

- Ciudad de Newport
- Estado de Oregon
- Fuera del estado
- 🔵 Fuera del país
- Otra (especifique)

COMENTARIOS ADICIONALES

26. ¿Tienes alguna sugerencia que ayude a mejorar la experiencia de transporte en el Área Natural Destacada de Yaquina Head?

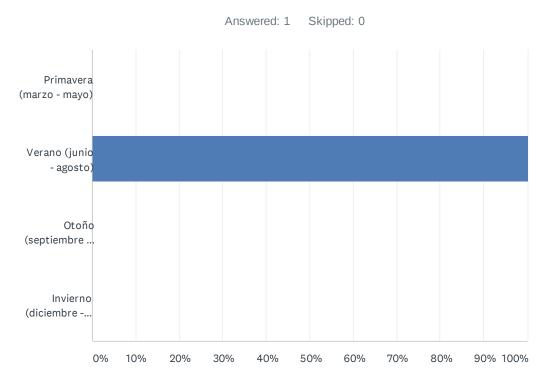

27. Añade cualquier comentario adicional que pueda resultar útil para el equipo del estudio.

28. Si deseas seguir participando en el estudio, escribe tu nombre y dirección de correo electrónico.

FEBRUARY 2022

YAQUINA HEAD Traffic Study

INTRODUCTION & PURPOSE

The Federal Highway Administration (FHWA) is conducting a study in coordination with the Bureau of Land Management (BLM) to evaluate the Yaquina Head Outstanding Natural Area (ONA). **Increasing visitation to the Yaquina Head ONA has resulted in growing traffic congestion and risk of user conflicts.** The purpose of the *Yaquina Head Traffic Study* is to identify transportation improvements to address operational, safety, and connectivity needs and any other areas of transportation concern.

STUDY AREA

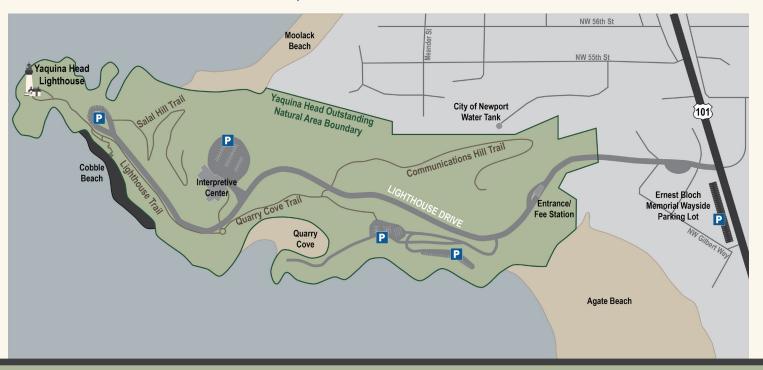

Yaquina Head ONA is a 100-acre protected area managed by the BLM and officially designated by the United States as an Outstanding Natural Area. The ONA is accessible via Lighthouse Drive which begins at the intersection with the Oregon Coast Highway (US Highway 101). The Yaquina Head ONA boundary begins about 0.2 mile west of the intersection. **The ONA site serves as the primary focus area for this study**.

RECREATION OPPORTUNITIES

The ONA provides numerous recreation opportunities including:

- Seal, sea bird, falcon, and other wildlife viewing
- Whale watching
- ADA accessible beach access at Quarry Cove
- Tide pooling at Cobble
 Beach

- Interpretive Center exhibits
- Biking Lighthouse Drive
- Hiking the many trails on site
- Touring Oregon's tallest lighthouse (as weather & staffing conditions permit)

The Yaquina Head Outstanding Natural Area was established by Congress to provide for the conservation and development of the scenic, natural, and historic values of the area; the continued use of the area for education, scientific study, and public recreation; and protection of the wildlife habitat of the area.

YAQUINA HEAD Traffic Study

WHAT IS A TRAFFIC STUDY?

The Yaquina Head Traffic Study provides an **in-depth analysis** of operational and safety conditions and identifies areas of transportation concern. The study will also **develop potential transportation improvements to address identified needs**. All improvements will be sensitive to environmental constraints, constructability challenges, financial feasibility, and public and stakeholder comments. The following topics are evaluated and considered in the study:

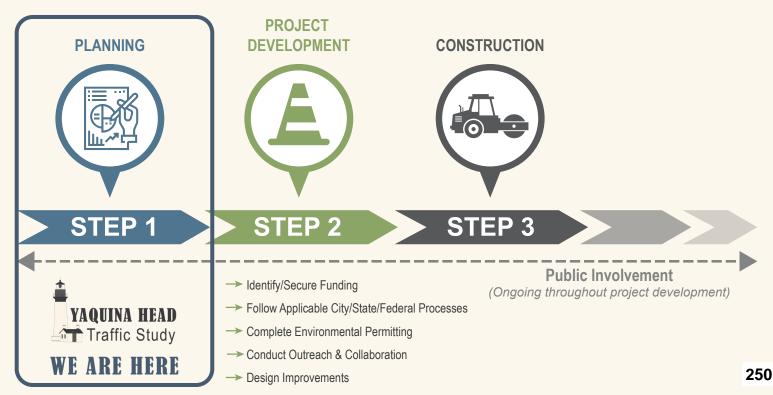

🖄 Multimodal Accommodations (Pedestrians, Bicyclists, Transit)

Past Planning Efforts and Applicable Regulations

WHAT HAPPENS AFTER THE TRAFFIC STUDY?

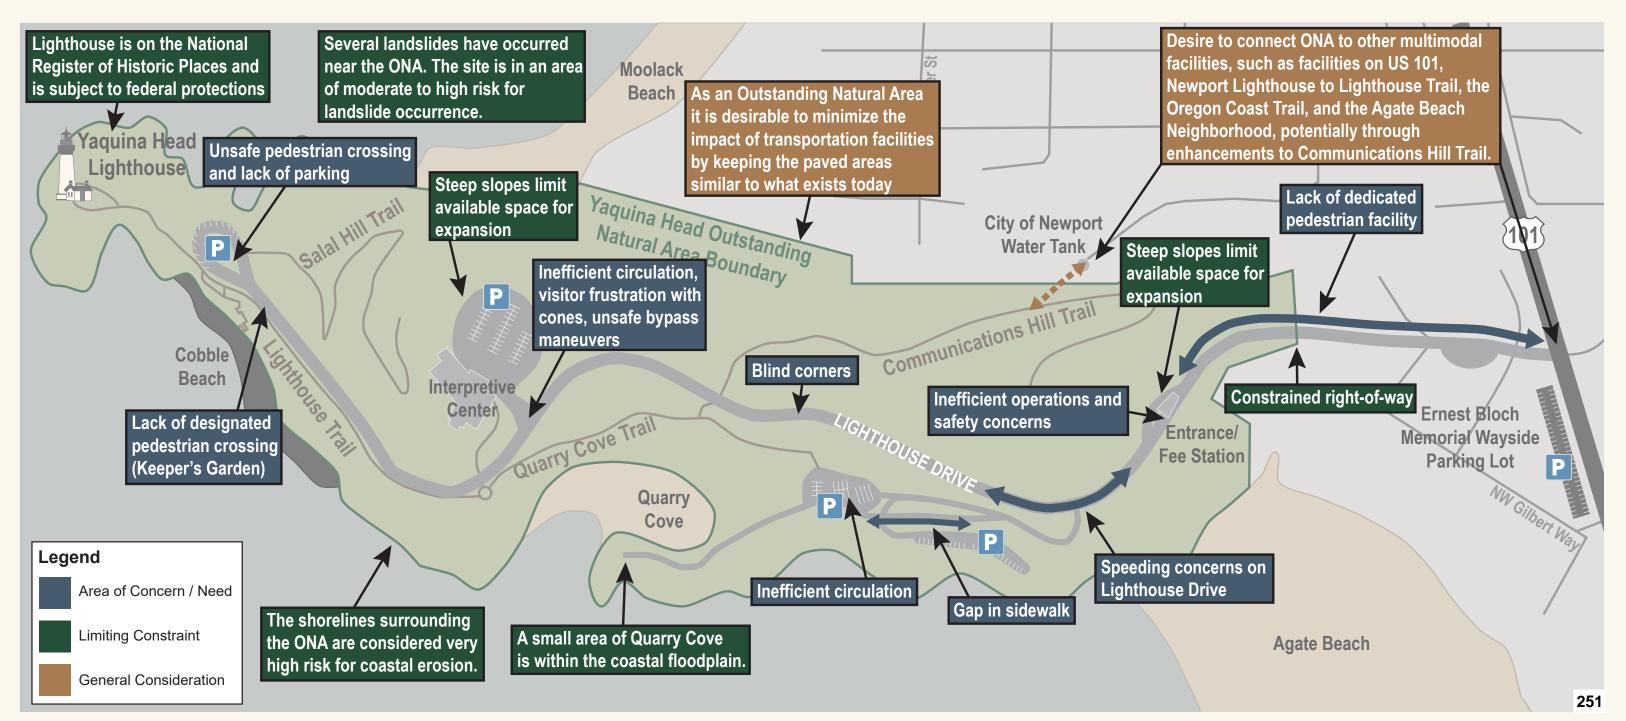

The intent of the traffic study is to provide an efficient transition from transportation analysis to future project development and environmental review, if any, based on identified need and funding availability. **This is an initial planning study to help inform a future design or construction project.** The implementation timeline for a project varies based on funding availability and project complexity. The general project development process is shown in the following graphic.

YAQUINA HEAD Traffic Study

KEY FINDINGS

The following map summarizes observed trends and areas for further consideration. These conditions were identified through review of past studies, site review, various public databases and field collected data, and input from BLM staff, stakeholders, and the public. Improvement options identified for this study will consider these findings.

YAQUINA HEAD Traffic Study

GOALS, OBJECTIVES, & OTHER CONSIDERATIONS

Goals and objectives are important in explaining why a potential improvement option may be necessary. Other considerations serve as constraints that may limit potential improvements. The following goals, objectives, and other considerations reflect the existing social, environmental, and engineering conditions and recognize the local and regional use of Lighthouse Drive and the adjoining transportation system.

Goal 1: Improve operation of the roadway corridor, entrance station, and parking lots.

Objectives:

- Reconfigure the entrance station to improve efficiency.
- Reconfigure parking lots to improve circulation and provide adequate ADA and RV parking opportunities.

Goal 2: Improve the safety of the transportation system for all roadway users.

Objectives:

- Reduce potential for vehicle/non-motorist conflicts.
- Construct facilities that lower vehicle speeds.

Goal 3: Provide multimodal transportation facilities that connect to destinations within the site and to the regional transportation system.

Objectives:

- Facilitate multimodal transportation access to recreational opportunities within the Yaquina Head ONA and the broader region.
- Provide multimodal facilities consistent with local planning efforts and recreational needs.
- · Integrate with regional public transportation travel options.

Goal 4: Extend the useful life of transportation facilities.

Objectives:

• Conduct appropriate preventative maintenance activities to extend the life of existing facilities.

Other Considerations

- · Context, function, and use of the ONA
- Impacts to environmental resources
- Temporary construction impacts
- · Construction feasibility and physical constraints
- Maintenance cost and responsibility
- Alignment with local and regional planning efforts
- Existing right-of-way
- Funding availability

NOW AVAILABLE

The Existing and Projected Conditions Report is now available for public review. The report analyzes transportation and environmental conditions and identifies areas of concern within the study area. The analysis will influence the development of potential improvement options to address the identified areas of concern.

To review the report, please visit the study website.

GET INVOLVED!

The public is encouraged to submit comments at any time throughout the study duration. Your feedback will help the study team better understand potential issues, concerns, opportunities, and constraints.

TO PROVIDE YOUR INPUT:

www.yaquinalights.org/yaquina-head-traffic-study

SCHEDULE

The Yaquina Head Traffic Study kicked off in April 2021. The first public outreach effort was conducted during the summer of 2021 to help inform development of the study. The second public outreach effort is occurring in January 2022 in coordination with release of the *Existing and Projected Conditions Memorandum*. All comments will be considered and incorporated as appropriate while the study team develops and refines recommended improvements. The draft *Traffic Study* is anticipated to be complete in April/May 2022. Following a public and stakeholder review period, the final *Traffic Study* is anticipated to be complete in June 2022.

Appendix A5: Public Outreach #3 Materials

The Federal Highway Administration (FHWA) and the Bureau of Land Management (BLM) have conducted a study to evaluate the transportation system at the Yaquina Head Outstanding Natural Area.

La Administración Federal de Carreteras (FHWA) y la Oficina de Gestión Territorial (BLM) han realizado un estudio para evaluar el sistema de transporte en el Área Natural Destacada de Yaquina Head.

The draft Yaquina Head Traffic Study is now available for public and stakeholder review. The study provides a summary of work completed and identifies improvements to address areas of concern. The public is encouraged to review the study and provide comments on preferred improvement concepts before the study is finalized.

El proyecto del Estudio de Tráfico de Yaquina Head ya está disponible para su revisión por el público y las partes interesadas. El estudio proporciona un resumen del trabajo realizado e identifica varias mejoras para abordar las áreas de preocupación identificadas. Se invita al público a revisar el estudio y a hacer comentarios sobre los conceptos de mejora preferidos antes de que se finalice el estudio.

May 2022

INTRODUCTION & PURPOSE

The Federal Highway Administration (FHWA) and the Bureau of Land Management (BLM) have conducted a study to evaluate the Yaguina Head Outstanding Natural Area (ONA). Increasing visitation to the Yaquina Head ONA has resulted in growing traffic congestion and risk of user conflicts. The purpose of the Yaquina Head Traffic Study is to determine what transportation improvements could be made to address operational, safety, and geometric needs and other areas of transportation concern. The study is a collaborative process with FHWA, BLM, Oregon Department of Transportation (ODOT), the City of Newport, stakeholders, and the public to identify needs and potential solutions. Preferred improvements have been identified by the study team for review by the public. The intended outcome of the study is to provide planning-level concepts that can be advanced to environmental review, design, and construction as funding becomes available.

NOW AVAILABLE!

The draft Yaquina Head Traffic Study and preferred improvements are now available for review!

YAQUINA HEAD

Traffic Study

CO FINA - WESTERN LANDS HIGHBAY

FHWA and BLM are conducting a formal public review period to gather feedback before the study is finalized. The public is encouraged to review the traffic study and accompanying conceptual improvements and share any questions, comments, or concerns with the study team.

Please submit all comments by June 17, 2022.

All feedback received will be considered by the study team. To review available materials, submit comments, and learn more about the study please visit:

www.yaquinalights.org/yaquina-head-traffic-study

SARAH NICOLAI Consultant Project Manager snicolai@rpa-hln.com 406-447-5038

SCHEDULE

The Yaquina Head Traffic Study kicked off in April 2021. The first public outreach effort was conducted during the summer of 2021 to help inform development of the study. A second public outreach effort occurred in February 2022 in coordination with release of the *Existing and Projected Conditions Memorandum*. A third outreach effort is being held now in coordination with release of the draft Yaquina *Head Traffic Study* and a formal public and stakeholder review period. All comments received during this period will be considered and incorporated as appropriate. The final Yaquina Head Traffic Study is anticipated to be complete by the end of June 2022.

The Yaquina Head Outstanding Natural Area was established by Congress to provide for the conservation and development of the scenic, natural, and historic values of the area; the continued 1256 the area for education, scientific study, and public recreation; and protection of the wildlife habitat of the area.

STUDY AREA

Yaquina Head ONA is a 100-acre protected area managed by the BLM and officially designated by the United States as an Outstanding Natural Area due to its scenic quality, and cultural and natural resources. The ONA is located on a prominent headland north of Newport, Oregon. The site provides numerous recreation opportunities including seal, sea bird, and wildlife viewing; whale watching; tide pooling; and walking and biking.

The ONA is accessible via Lighthouse Drive which begins at the intersection with the Oregon Coast Highway (US Highway 101) at Mile Post 137.61. The Yaquina Head ONA boundary begins about 0.2 miles west of the intersection. The ONA site and the Lighthouse Drive corridor starting from the US 101 intersection serve as the primary focus area for this study, although parking facilities and multimodal corridors outside the Yaquina Head ONA boundary are also considered in the context of connectivity and access for ONA visitors.

PREFERRED IMPROVEMENTS

Preferred configurations have been prepared for the following four key locations at the ONA.

- Yaquina Head Entrance Station
- Quarry Cove Upper Parking Lot
- Interpretive Center Parking Lot
- Lighthouse Circle / Keeper's Garden

Additional sitewide strategies to address areas of concern have also been identified. To review the preferred configurations and sitewide strategies and to provide your input, please visit the study website:

www.yaquinalights.org/yaquina-head-traffic-study

All feedback will be considered by the study team.

PLEASE SUBMIT ALL COMMENTS BY

JUNE 17, 2022

KEY FINDINGS

The draft Yaquina Head Traffic Study is now available for public review on the study website (www.yaquinalights.org/yaquinahead-traffic-study)! The report provides a summary of transportation and environmental conditions, identifies areas of concern within the study area, and presents preferred improvements to address identified needs as summarized below.

- SITE CIRCULATION: Inefficient circulation occurs at the entrance station, sometimes resulting in long delays and unsafe turnaround maneuvers. Circulation within the Yaquina Head ONA parking areas, including Quarry Cove, Interpretive Center, and lighthouse circle, could also be improved. Large vehicle circulation is particularly challenging in some parking areas.
- SPEEDS: Speeding was noted as a concern by staff and the public. Collected traffic data showed vehicles speeding in the 15-mph zones on the Quarry Cove access road and near the Keeper's Garden.
- PARKING: Visitors are often frustrated with traffic cones at the Interpretive Center, resulting in unsafe bypass or turning maneuvers. Visitor frustration also occurs due to lack of available parking at lighthouse circle. Additional large vehicle and ADA parking stalls are desired throughout the site.

- PEDESTRIAN ACCOMMODATIONS: Lighthouse Drive lacks dedicated pedestrian facilities between the US 101 intersection and the entrance station, and gaps in pedestrian facilities occur along the Quarry Cove access roadway. The Yaquina Head ONA lacks designated crosswalks in key locations where pedestrians typically cross Lighthouse Drive. Additionally, there is poor multimodal connectivity to facilities outside the ONA.
- ENVIRONMENTAL CONSTRAINTS: The site is located in an area that is susceptible to landslides, earthquakes, coastal erosion, tsunami, and potential flooding. There are steep slopes in several locations that may limit potential improvements. All improvements should be sensitive to native plant and animal species and be mindful of impacts to the threatened and endangered species that are known to occur in the area. The Yaquina Head Lighthouse is on the National Register of Historic Places and may be subject to federal protections. As an ONA, it is important to p 257

Mayo 2022

INTRODUCCIÓN & OBJETIVO

La Administración Federal de Carreteras (FHWA) y la Oficina de Gestión de Tierras (BLM) han realizado un estudio para evaluar el Área Natural Destacada (ONA) de Yaguina Head. El aumento de las visitas al ONA de Yaquina Head ha dado lugar a una creciente congestión del tráfico y al riesgo de conflictos entre los usuarios. El objetivo del Estudio de Tráfico de Yaquina Head en es determinar qué mejoras en el transporte podrían realizarse para abordar las necesidades operativas, de seguridad y geométricas y otras áreas de interés para el transporte. El estudio es un proceso de colaboración con la FHWA, la BLM, el Departamento de Transporte de Oregón (ODOT), la ciudad de Newport, las partes interesadas y el público para identificar las necesidades y las posibles soluciones. El equipo de estudio ha identificado las mejoras prioritarias para que sean revisadas por el público. El resultado previsto del estudio es proporcionar conceptos a nivel de planificación que puedan avanzar hacia la revisión ambiental, el diseño y la construcción cuando se disponga de financiación.

¡YA ESTÁ DISPONIBLE!

¡El proyecto de *Estudio de Tráfico de Yaquina Head* y las mejoras prioritarias ya están disponibles para su revisión!

YAQUINA HEAD

Traffic Study

La FHWA y la BLM están llevando a cabo un periodo de revisión pública formal para recabar opiniones antes de finalizar el estudio. Se invita al público a revisar el estudio de tráfico y las mejoras conceptuales que lo acompañan y a compartir cualquier pregunta, comentario o preocupación con el equipo del estudio.

Favor de enviar sus comentarios antes del 17 de junio de 2022.

El equipo del estudio tendrá en cuenta todos los comentarios. Para consultar el material disponible, enviar comentarios y obtener más información sobre el estudio, visite:

www.yaquinalights.org/yaquina-head-traffic-study

PROGRAMA

El *Estudio de Tráfico de Yaquina Head* comenzó en abril de 2021. El primer esfuerzo de divulgación pública se llevó a cabo durante el verano de 2021 para ayudar a informar el desarrollo del estudio. Un segundo esfuerzo de divulgación pública ocurrió en febrero de 2022 en coordinación con la publicación del *Memorandum de Condiciones Existentes y Proyectadas.* Un tercer esfuerzo de divulgación se está llevando a cabo actualmente, en coordinación con la publicación del proyecto de *Estudio de Tráfico de Yaquina Head* y un período de revisión formal del público y las partes interesadas. Todos los comentarios recibidos durante este periodo se tendrán en cuenta y se incorporarán según proceda. Se prevé que el *Estudio de Tráfico de Yaquina Head* final esté terminado a finales de junio de 2022.

El área natural destacada de Yaquina Head fue creada por el Congreso para fomentar la conservación y desarrollo de los valores paisajísticos, naturales e históricos de la zona; el uso continua área para la educación, estudios científicos y público esparcimiento; así como la protección del hábitat de la vida silvestre de la zona.

ÁREA DE ESTUDIO

El ONA de Yaquina Head es un área protegida de 100 acres gestionada por el BLM y designada oficialmente por los Estados Unidos como un área natural destacada debido a su calidad paisajística y recursos culturales y naturales. El ONA se encuentra en un cabo prominente al norte de Newport, Oregon. El sitio ofrece numerosas oportunidades de esparcimiento, como el avistamiento de focas, aves marinas y fauna silvestre; también se puede avistar ballenas, bañarse en pozas marinas, realizar caminatas o andar en bicicleta.

Se puede acceder al ONA entrando por Lighthouse Drive, que comienza en el cruce con el Oregon Coast Highway (US Highway 101)a la altura del Mile Post 137.61. El límitedel ONA de Yaquina Head comienza a unas 0.2 millas al oeste del cruce. El área del ONA y el corredor de Lighthouse Drive a partir de la intersección con la US 101 son el área principal de este estudio, aunque las instalaciones de estacionamiento y los corredores multimodales fuera de los límites del ONA de Yaquina Head también se consideran en el contexto de la conectividad y el acceso para los visitantes de la ONA.

MEJORAS PREFERENTES

Se han preparado arreglos preferentes para los siguientes cuatro lugares clave del ONA.

- Estación de entrada a Yaquina Head
- Estacionamiento superior de Quarry Cove
- Estacionamiento del Centro de Interpretación
- Rotonda del faro / Keeper's Garden

También se han identificado estrategias adicionales en todo el sitio para abordar las áreas de preocupación. Para revisar los arreglos preferentes y las estrategias a nivel de todo el sitio y para dar su opinión, por favor visite el sitio web del estudio:

www.yaquinalights.org/yaquina-head-traffic-study

El equipo del estudio tendrá en cuenta todos los comentarios.

POR FAVOR, ENVÍE TODOS LOS COMENTARIOS ANTES DEL

17 DE JUNIO, 2022

HALLAZGOS PRINCIPALES

¡El proyecto de Estudio de Tráfico de Yaquina Head ya está disponible para su revisión pública en el sitio web del estudio (www.yaquinalights.org/yaquina-head-traffic-study)! El informe proporciona un resumen de las condiciones del transporte y del medio ambiente, identifica las áreas de preocupación dentro del área de estudio y presenta las mejoras prioritarias para abordar las necesidades identificadas, como se resume a continuación.

- CIRCULACIÓN EN EL SITIO: La circulación en la estación de entrada es ineficaz, lo que a veces provoca largos retrasos y maniobras de giro poco seguras. La circulación dentro de las zonas de estacionamiento del ONA de Yaquina Head, incluyendo Quarry Cove, el Centro de Interpretación y la rotonda del faro, también podría mejorarse. La circulación de vehículos grandes es especialmente difícil en algunas zonas de estacionamiento.
- EXCESO DE VELOCIDAD: El personal y el público señalaron que el exceso de velocidad era una preocupación. Los datos de tráfico recogidos mostraron que los vehículos circulaban con exceso de velocidad en las zonas de 15 mph de la carretera de acceso a Quarry Cove y cerca del Keeper's Garden.
 - ESTACIONAMIENTO: Los visitantes se sienten a menudo frustrados por los conos de tráfico en el Centro de Interpretación, lo que da lugar a maniobras inseguras de circunvalación o giro. La frustración de los visitantes también se debe a la falta de estacionamiento disponible en la rotonda del faro. Se desea disponer de más plazas de estacionamiento para vehículos grandes y ADA en todo el recinto.

ADAPTACIONES PARA PEATONES: Lighthouse Drive carece de instalaciones peatonales exclusivas entre la intersección de la US 101 y la estación de entrada, y hay huecos en las instalaciones peatonales a lo largo de la carretera de acceso a Quarry Cove. El ONA de Yaquina Head carece de cruces peatonales designados en lugares clave donde los peatones suelen cruzar Lighthouse Drive. Además, hay una pobre conectividad multimodal con las instalaciones fuera del ONA.

LIMITACIONES MEDIOAMBIENTALES: EI

e emplazamiento está situado en una zona susceptible de sufrir desprendimientos, terremotos, erosión costera, tsunamis y posibles inundaciones. Hay pendientes pronunciadas en varios lugares que pueden limitar las posibles mejoras. Todas las mejoras deberán tener en cuenta las especies vegetales y animales endémicas, así como el impacto en las especies amenazadas y en peligro de extinción que se sabe que existen en la zona. El faro de Yaquina Head está incluido en el Registro Nacional de Lugares Históricos y puede estar sujeto a protecciones federales. Como ONA, es importante proteger el medio ambiente y minimizar los impacto 259

INTRODUCTION & PURPOSE

The Federal Highway Administration (FHWA) and the Bureau of Land Management (BLM) have conducted a study to evaluate the transportation system at the Yaquina Head Outstanding Natural Area (ONA). Increasing visitation to the Yaquina Head ONA has resulted in growing traffic congestion and risk of user conflicts. The purpose of the Yaquina Head Traffic Study is to identify transportation improvements to address operational, safety, and connectivity needs and other areas of transportation concern.

STUDY AREA

Yaquina Head ONA is a 100-acre protected area managed by the BLM and officially designated by the United States as an Outstanding Natural Area. The ONA is accessible via Lighthouse Drive which begins at the intersection with the Oregon Coast Highway (US Highway 101). The Yaquina Head ONA boundary begins about 0.2 mile west of the intersection. The ONA site serves as the primary focus area for this study.

RECREATION OPPORTUNITIES

The ONA provides numerous recreation opportunities including:

- Seal, sea bird, falcon, and other wildlife viewing
- Whale watching
- ADA accessible beach access at Quarry Cove
- Tide pooling at Cobble Beach

Interpretive Center exhibits

MAY 2022

- Biking Lighthouse Drive
- · Hiking the many trails on site
- Touring Oregon's tallest lighthouse (as weather & staffing conditions permit)

The Yaquina Head Outstanding Natural Area was established by Congress to provide for the conservation and development of the scenic, natural, and historic values of the area; the continued use of the area for education, scientific study, and public recreation; and protection of the wildlife habitat of the area.

WHAT IS A TRAFFIC STUDY?

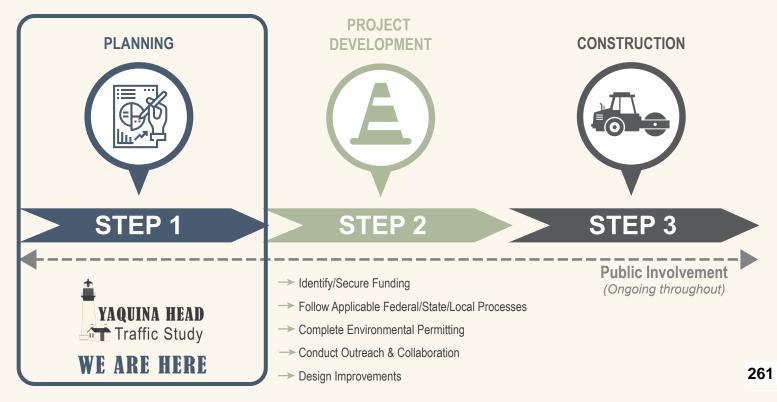

The Yaquina Head Traffic Study provides an in-depth analysis of operational and safety conditions and identifies areas of transportation concern. The study identifies four site-specific improvements and several sitewide strategies to address transportation needs. All improvements have been evaluated for sensitivity to environmental constraints, constructability challenges, financial feasibility, and public and stakeholder comments. The following topics were evaluated and considered in the study:

| ູ | Site Circulation | \$ \$70 | Multimodal Accommodations (Pedestrians, Bicyclists, Transit) |
|---|--|----------------|--|
| | Existing and Future Traffic Operations | P | Parking |
| A | User Safety | Ē | Past Planning Efforts and Applicable Regulations |

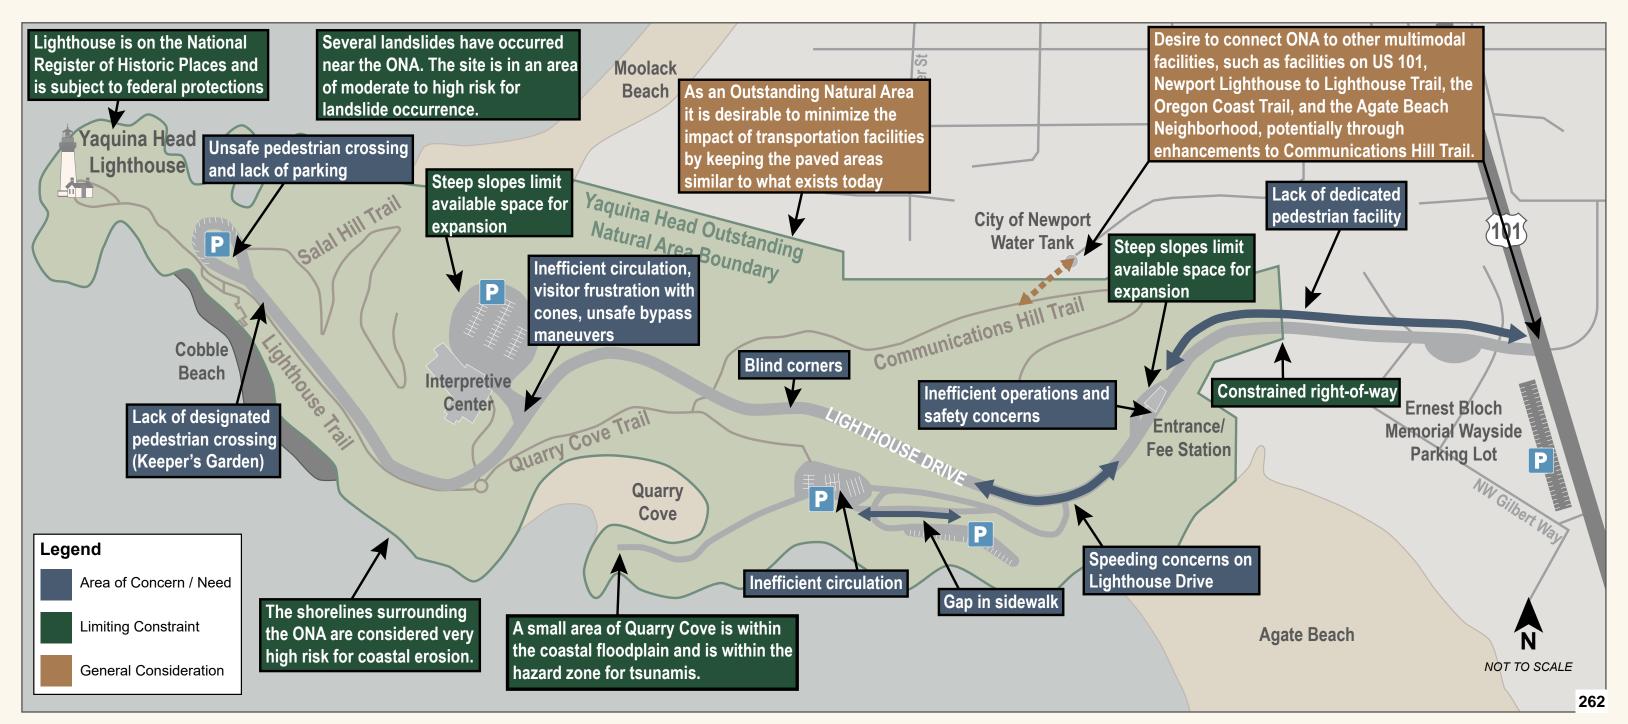

WHAT HAPPENS AFTER THE TRAFFIC STUDY?

The intent of the traffic study is to provide an efficient transition from transportation analysis to future project development and environmental review, if any, based on identified need and funding availability. **This is an initial planning study to help inform a future design or construction project.** The implementation timeline for a project varies based on funding availability and project complexity. The general project development process is shown in the following graphic.

KEY FINDINGS

The following map summarizes observed trends and areas for further consideration. These conditions were identified through review of past studies, site review, various public databases and field collected data, and input from BLM staff, stakeholders, and the public. Improvements identified for this study are intended to address these findings.

GOALS, OBJECTIVES, & OTHER CONSIDERATIONS

Goals and objectives are important in explaining why a potential improvement may be necessary. Other considerations serve as constraints that may limit potential improvements. The following goals, objectives, and other considerations reflect the existing social, environmental, and engineering conditions and recognize the local and regional use of Lighthouse Drive and the adjoining transportation system.

Goal 1: Improve operation of the roadway corridor, entrance station, and parking lots.

Objectives:

- Reconfigure the entrance station to improve efficiency.
- Reconfigure parking lots to improve circulation and provide adequate ADA and RV parking opportunities.

Goal 2: Improve the safety of the transportation system for all roadway users.

Objectives:

- Reduce potential for vehicle/non-motorist conflicts.
- Construct facilities that lower vehicle speeds.

Goal 3: Provide multimodal transportation facilities that connect to destinations within the site and to the regional transportation system.

Objectives:

- Facilitate multimodal transportation access to recreational opportunities within the Yaquina Head ONA and the broader region.
- Provide multimodal facilities consistent with local planning efforts and recreational needs.
- · Integrate with regional public transportation travel options.

Goal 4: Extend the useful life of transportation facilities.

Objectives:

• Conduct appropriate preventive maintenance activities to extend the life of existing facilities.

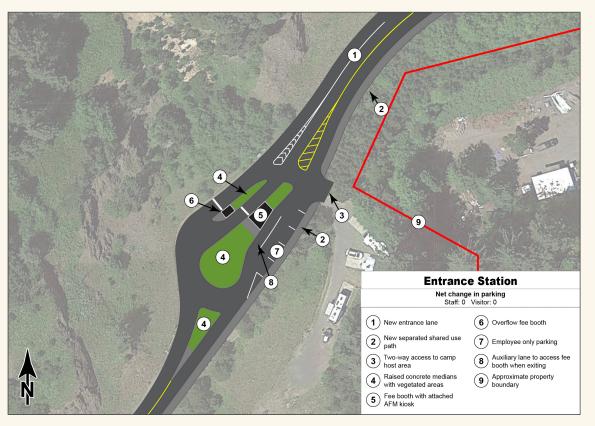

Other Considerations

- · Context, function, and use of the ONA
- Impacts to environmental resources
- Temporary construction impacts
- · Construction feasibility and physical constraints
- Maintenance cost and responsibility
- Alignment with local and regional planning efforts
- Existing right-of-way
- Funding availability

ENTRANCE STATION

This preferred configuration is conceptual in nature and is intended to be used for discussion purposes only. The final configuration, design, and cost will be dependent on public and stakeholder input and future environmental and engineering analyses.

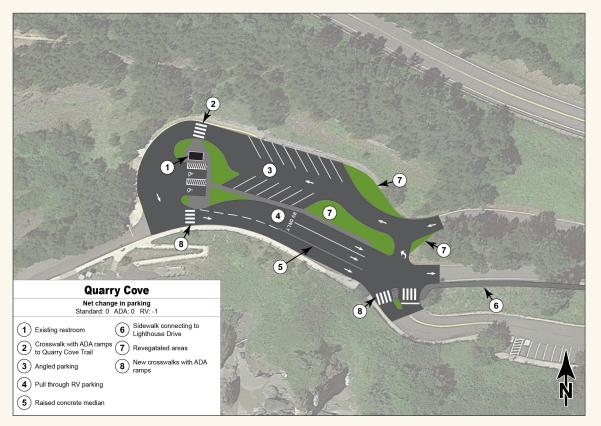

FEATURES & BENEFITS:

- Dual entry lanes with credit card kiosks and barrier gates with automatic arms would expedite entrance times and reduce queuing.
- Entrance to the camp host area is intended to allow easy access by RVs and easy turnarounds by staff with large vehicles.
- Auxiliary exit lane would allow visitors to stop at the fee booth to talk to the ranger or return an ADA clicker.
- Shared use path would provide protection for nonmotorists and physical separation from vehicles, reducing the potential for conflicts.
- Configuration is intended to generally fit within the existing roadway footprint, however, some expansion would be required to accommodate a second entry lane and shared use path.

ESTIMATED COST: \$1.9M - \$2.3M264

QUARRY COVE

This preferred configuration is conceptual in nature and is intended to be used for discussion purposes only. The final configuration, design, and cost will be dependent on public and stakeholder input and future environmental and engineering analyses.

FEATURES & BENEFITS:

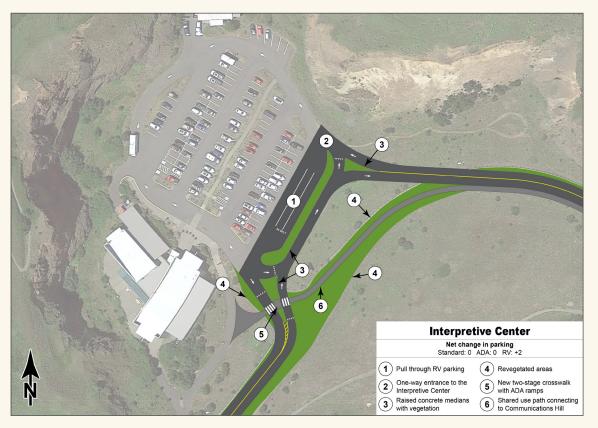

- Reconfigured lot would improve circulation and provides more logical traffic flow within the existing parking lot footprint.
- All entering traffic would circulate through a single parking aisle with angled parking stalls on both sides.
- The total number of standard and ADA parking spaces would remain the same compared to existing. There would be a loss of one RV/bus parking stall.
- The revised circulation pattern is more logical and would likely reduce the potential for conflict due to driver confusion and unintentional wrong-way driving.

ESTIMATED COST: \$600K - \$900K<mark>265</mark>

 Construction of the sidewalk on the exit road would enhance connectivity and provide protection for non-motorists.

INTERPRETIVE CENTER

This preferred configuration is conceptual in nature and is intended to be used for discussion purposes only. The final configuration, design, and cost will be dependent on public and stakeholder input and future environmental and engineering analyses.

FEATURES & BENEFITS:

- All traffic would circulate through the Interpretive Center parking lot via a new approach road and around the outside perimeter of the lot in a counterclockwise motion.
- A shared use path constructed in the existing roadbed between the new approach and the existing entrance/exit intersection would enhance pedestrian safety and connectivity.
- Increased number of RV/bus parking stalls.
- Configuration directs all traffic into the Interpretive Center parking lot to encourage visitation/parking and reduce parking demand at the lighthouse.
- Although two intersections would be provided in the new configuration, only yielding maneuvers are required.

ESTIMATED COST: \$1.1M - \$1.9M 266

LIGHTHOUSE / KEEPER'S GARDEN

This preferred configuration is conceptual in nature and is intended to be used for discussion purposes only. The final configuration, design, and cost will be dependent on public and stakeholder input and future environmental and engineering analyses.

FEATURES & BENEFITS:

- Reconfigured parking stalls would allow more efficient and functional parking.
- Increased number of ADA-accessible parking stalls.
- Reduced diameter and reshaped center mound for easier circulation and better visibility of available parking and pedestrians.
- Streamlined pedestrian movements with safe crossings at Keeper's Garden and across parking lot.
- Removal of stairs to Cobble Beach would promote use of sidewalk and crossings.
- Optional speed tables at crossings would help slow traffic and enhance visibility for pedestrians.

ESTIMATED COST: \$300K - \$700K267

• Minimal impacts; new configuration would fit within existing roadway footprint.

TRAFFIC CALMING

- Lower Posted Speed Limit
- Speed Feedback Signs
- Warning Signs
- Speed Bumps, Humps, and Tables
- Narrow Travel Lanes
- Lateral Shifts and Chicanes

PEDESTRIAN ACCOMMODATIONS

- Lighthouse Drive Shared Use Path
 - North or South Side
- Separation Types
 - Guardrail, Cable Rail, Bollards, Jersey Barrier, Grade Separation/Curbing

ALTERNATIVE TRANSPORTATION

- Regular Transit Service
- Bicycle Accommodations
- Bike Share Program/Onsite Bike Rentals
- Onsite Shuttle Bus
- Guided Tour Bus
- Electric Vehicle Accommodations

WAYFINDING

- Identification, Directional, Informational, and Regulatory Signs
- Dynamic Display Signs

PRESERVATION & MAINTENANCE

- Optimal Timing
- Preventive Asphalt Maintenance Activities
- Drainage Improvements
- Routine Maintenance Activities
- Emergency Maintenance Activities

OVERSIZE & ACCESSIBLE PARKING

- ADA Parking
- RV/Bus Parking

MANAGEMENT

- Entrance Station Management
- Emergency Management

GET INVOLVED!

FHWA and BLM are conducting a formal public review period to gather feedback before the study is finalized. The public is encouraged to review the traffic study and accompanying conceptual illustrations and share any questions, comments, or concerns with the study team. The public review period extends from **May 16, 2022, to June 17, 2022**.

The public is encouraged to submit comments at any time to one of the study representatives listed below. All feedback received will be considered by the study team.

Please submit all comments by June 17, 2022.

TO REVIEW MATERIALS & PROVIDE YOUR INPUT:

SCHEDULE

The Yaquina Head Traffic Study kicked off in April 2021. The first public outreach effort was conducted during the summer of 2021 to help inform development of the study. A second public outreach effort occurred in February 2022 in coordination with release of the *Existing and Projected Conditions Memorandum*. A third outreach effort is being held now in coordination with release of the draft Yaquina *Head Traffic Study* and a formal public and stakeholder review period. All comments received during this period will be considered. The final Yaquina Head Traffic Study is anticipated to be complete in June 2022.

| 01 | 08/20/2021 George Dwyer <i>Agate Beach Safety</i> <i>Coalition, LLC</i> | Thank you for the invite giving me the opportunity to provide suggestions that address the transportation enhancements currently in the planning stage. Having only the knowledge of a visitor's experience, I would like to suggest the following for consideration for improved mobility & safety during a typical visit. A secondary manned or un-manned (camera monitored) entry gate for pass holders not needing assistance or required to pay entry fees. This could be in use full time or just during peak visitation to alleviate long wait times. Parking at the Lighthouse seems to always be scarce. I would like to suggest an overflow parking area made of non-asphalt, environmentally friendly materials. A more clearly defined "STOP SIGN" should be used at the intersection of Quarry Cove Trail & Lighthouse Drive. I do not know if any "Maximum Consolity" participant area in place for path and that the the second of the secon |
| | | I do not know if any "Maximum Capacity" restrictions are in place for safety reasons? This is something that should be considered in the event of an emergency evacuation. The installation of security cameras installed at strategic locations if not already in use. |
| 02 | 03/01/2022 Kaety Jacobson Lincoln County Commissioner | A few comments about the study materials provided. While the study focuses on daily transportation issues, and it certainly needs to do that, I felt there should have been more energy spent on addressing emergency transportation issues, both for "regular" emergencies (someone calls 911 and an ambulance needs to get in) as well as for large scale emergencies like a fire, earthquake, tsunami, etc. While daily operations was the focus and I agree in that purpose, I felt like a better layer of emergency services and evacuation needed to be provided. You could for example solve a daily transportation issue but it could create a worse problem for emergency vehicles. Additionally what is the mass scale site evacuation plan? Everyone on foot, letting people use vehicles to exit? The transportation should include considerations for those kinds of things in a bigger way than it seemed to. |
| 03 | 03/02/2022 Herb Fredricksen | Please put me on your mailing list for this project. When are comments due on the traffic study? thank you |

Appendix A7: Public Comments During and After Review (May 16 - June 17, 2022)

OR BLM NWO 1516291(1) Task Order No. 69056721F000012 PUBLIC COMMENTS DURING AND AFTER REVIEW

|----|---|---|---|
| 01 | 05/24/2022 L.L. Ehret Local Resident | I live in North Agate Beach and am a regular visitor to YHONA. Shuttle: I endorse the idea of a shuttle bus to lessen traffic. Pickup sites to include RV parks besides the obvious like Nye beach/dense tourist lodging, bay front, aquarium, OMSI, Hatfield MSC. Significant funding will need be allotted for signage which should be big, attractive, and include schedules. Part of shuttle fee would cover entrance cost so no need to stop at entrance. Speed bumps/slowing speeders Speed bumps can be satisfactorily placed in urban areas of 25mph. Corvallis has speed bumps on the west end of Circle Blvd. specifically to slow traffic from a 35mph zome to a 25 mph zone. Speed bumps are also installed on Garfield NW in the area of Porter city park to remind drivers of the 25mph limit. Comments on bird and wildlife preservation are general, lacking a specificity that hints at a lack of actual consideration or effort. | Thank you for your email and participating in the public review process of this Traffic Study at the Yaquina Head Outstanding Natural Area. We will take these comments into consideration when completing the final Traffic Study. Transit considerations are addressed in the study, and the Federal Highway Administration (FHWA) and the Bureau of Land Management (BLM) A support connectivity with existing and future public transportation opportunities. Bird and wildlife preservation are important to the BLM/FHWA, especially for this site that has one of the largest nesting colonies of Common Murre's on the west coast. Speed reduction measures are an aspect of the study and more detailed considerations will be investigated through future project development and extensive environmental review. Further environmental effects, including wildlife, will be considered as required under the National Environmental Policy Act. Carrie Warren, P.E. FHWA-WFLHD Project Manager |
| 02 | 06/07/2022 Lee J. Siegel Local Resident | From my skimming of the Yaquina Head traffic study, I gather that visitors now do not like the cones trying to force them into the interpretive center lot. I certainly drive around them when I want to go to the lighthouse. So what does your bureaucracy do? Propose forcing us into the interpretive center lot! Just the opposite of what the public wants. Obnoxious. People visit Yaquina Head primarily to see the lighthouse (although as a local resident, I often park in the interpretive center lot and hike up Communications Hill). But I also take out-of-town visitors to the lighthouse, where it often is very windy. There is no way in hell we're going to park at the interpretive center and walk or shuttle when the wind is howling. I take my visitors to the lighthouse parking area, park if possible (and it usually is possible), bundle up and and spend 15-20 minutes walking to the viewpoints at the lighthouse and above Cobble Beach. Then we leave. Your proposal would make people spend a significantly longer period of time parking, taking shuttles, walking etc. instead of letting them quickly come and go after visiting the main highlight of the area: the lighthouse and environs. Typical but bad bureaucratic thinking. I do like proposals to speed things up at the entrance station and improve circulation at the Quarry Cove lot. | We appreciate you taking the time to comment on the Yaquina Head Traffic Study. Your comments will be included as part of the project documentation. As a regular visitor and neighbor your comments are particularly valuable. Much of the push for this study was due to the very concerns that you raised regarding cones and directing visitors to the Interpretive Center (IC). We are now receiving well over 450,000 visitor a year at Yaquina Head. The majority of those visitors have never been here before and benefit from the orientation and exhibits at the IC, and the facilities there that include real plumbing. I certainly understand the desire to get to the lighthouse as quickly as possible at times. The draft proposals we have out for review do consider realigning the road to encourage vehicles to stop at the IC but do not require it - lighthouse circle parking is not under consideration for a closure. We are hopeful that a new design will reduce the need for the use of cones and still provided quick access for those driving through to the lighthouse. We are trying to find the right balance for our new visitors and those that are lucky enough to live in the area - and your comments are helping with that. Please feel free to contact me via email or phone about anything connected to Yaquina Head. Matt Betenson Yaquina Head Site Manager Bureau of Land Management |

|----|---|--|---|
| 03 | omment ID 06/09/2022 Carol Walsh Local Resident | Comment After reading all 82 pages of this VERY expensive study that "encouraged" comments on the study, I couldn't find any easy way to actually make my comments known. I addressed my concerns to Marie, who then provided me this email address. It seems the BLM really doesn't want comments. First: the speeds measured during study weren't accurate, since I personally witnessed almost every car that went over the test strips, slowed down to go over them. Since the study just presented various "options" with no clear recommendation: Install a separate walkway for pedestrians (using the same barrier as on the path down to the lighthouse) on the south side of Lighthouse drive for the entire distance to connect with existing walkway, rather than switching back and forth on South/North requiring walkers to cross road. Although the problems with people parking inappropriately and speeding were addressed, nothing was discussed on enforcement of the present or future rules. This can be easily addressed NOW without any studiesfollow through with warnings and/or tickets to the offenders and safety will improve dramatically for pedestrians. | Response We appreciate you taking the time to comment of the Yaquina Head Traffic Study. Your comments will be included as part of the project documentation. As a regular visitor and neighbor your comments are particularly valuable. Much of the push for this study was due to the very concerns that you raise regarding a safe walkway for pedestrians and proper separation from vehicle traffic. In coordination with the City of Newport and the Oregon Department of Transportation, we are hopeful of a dedicated pedestrian path - separated from vehicles - leading from Highway 101 all the way to the lighthouse. Location of the new pedestrian path is somewhat dependent on requirements for road design and terrain/geology, but the initial intent is to place it on the south side as much as possible. Please feel free to contact me via email or phone about anything connected to Yaquina Head. Thank you! Matt Betenson Yaquina Head Site Manager Bureau of Land Management |
| 04 | 06/13/2022 Kim Jones Local Resident | I appreciate the interest in maintaining visitor access to Yaquina Head. I have a couple comments on the proposed traffic study for Yaquina Head. As background, I have been visiting Yaquina Head for more than 40 years. During the past 10 years, I visit regularly (weekly, monthly) to view whales and the sea pups, check on the nesting and resident seabirds, watch the peregrines and eagles, climb Salal Hill for a better view, walk down to the tide pools, and/or check/view the surf. When folks visit from out of state, Yaquina Head is a common destination for us as well. In my opinion, the two big bottlenecks are at the entrance and the interpretive center. Otherwise I have not experienced any issues while visiting. The entrance should have a second line for folks (commonly local residents) to drive on the left side of the booth to show our annual or (now that I am officially old) lifetime passes. The current line is regularly backlogged because of one-time visitors who need to pay, ask for information, or request the brochure. Very simple solution - no need for complex gates. Just allow a line on each side of the | We appreciate you taking the time to comment on the Yaquina Head Traffic Study. Your comments will be included as part of the project documentation. As a regular visitor your comments are particularly valuable. Much of the push for this study was due to the very concerns that you raised regarding cones and directing visitors to the Interpretive Center (IC). We are now receiving well over 450,000 visitor a year at Yaquina Head. The majority of those visitors have never been here before and benefit from the orientation and exhibits at the IC, and the facilities there that include real plumbing to a sewer versus a vault toilet near the lighthouse. I certainly understand the desire to get to the lighthouse as quickly as possible at times. The draft proposals we have out for review includes a second booth at the entrance to help facilitate people through the line, especially those with passes. The proposals also consider realigning the road to encourage vehicles to stop at the IC but does not require it. We are hopeful that a new design will reduce the need for the use of cones and still provided quick access for those driving through to the lighthouse. We are trying to find the right balance for our new visitors and those that are lucky enough to |

| | | booth, the one on the left for those with annual passes. | live in the surrounding area - and your comments are helping with that. |
| | | • The cones that direct cars into the interpretive center lot create a serious danger to vehicles and to pedestrians, especially youngsters and seniors walking from the parking lot to the interpretive center. Parking lots are the location of most vehicle and pedestrian accidents. The current parking lot forces people to walk across the driving lanes. Children are very hard to see darting out from between the cars. Please, please don't force vehicle into the parking lot. And lets face it, after dozens of trips to Yaquina Head over the years, I DO NOT WANT TO VISIT THE INTERPRETIVE CENTER! I want to drive slowly out to the lighthouse area. If the spaces are full, I will drive back, park and walk. If we have a less mobile individual with us, we can drop that person off, drive to the larger lot, and walk back. If traffic control is necessary to slow folks up, put in rumble strips and a stop sign. Don't create a complex driving pattern. Keep it simple. | Please feel free to contact me via email or phone about anything connected to Yaquina Head. Thank you! Matt Betenson Yaquina Head Site Manager Bureau of Land Management |
| 05 | 06/24/2022 Del Lockwood City of Newport Emergency Management | Yaquina Head is a beautiful spot and worth visiting year round. Thanks for your consideration. State and Federal Parks are an important resource during emergencies. The public on both sides of Yaquina Head may climb up to get to higher ground in a Cascadia earthquake/Tsunami. An Emergency Cache of supplies for staff and the public would be needed if both sides of 101 where impassable due to earthquake/Tsunami. Yaquina Head may become and island of survivors of staff and public. Storing 55 gallon drums of water and emergency food rations is becoming more common. I reviewed the plan with Fire Department staff as they have performed rescues there and have no current issues with turn-around space or access. Adding a lane near the fee booth and drive through space in parking lots are both good for emergency access. The document has pictures of Tsunami way-finding signs but it does not state that they will be installed. Way-finding to high- ground and Ernest Bloch memorial Wayside would help people during an emergency. | Thank you, I appreciate the quick response. We'll add those comments into the project record. Separately, we've had start and stops with evacuation/tsunami planning. I hope it's alright if I reach out to you next time we visit this topic. Matt Betenson Yaquina Head Site Manager Bureau of Land Management |

Existing and Projected Conditions Memorandum

1.0. INTRODUCTION

The Federal Highway Administration (FHWA) Western Federal Lands Highway Division (WFL) has initiated a study to evaluate the Yaquina Head Outstanding Natural Area (ONA) and determine what improvements can be made to address identified needs while considering public and stakeholder input, environmental constraints, constructability challenges, and financial feasibility. The *Yaquina Head Traffic Study* will identify site needs, determine potential improvements to address those needs, develop a funding strategy, and forecast a development timeline. The study will be a collaborative process with WFLHD, the U.S. Bureau of Land Management (BLM), Oregon Department of Transportation (ODOT), the City of Newport, stakeholders, and the public to identify needs and potential solutions.

The intent of this *Existing and Projected Conditions Memorandum* is to analyze transportation and environmental conditions and identify areas of concern within the study area. The analysis includes a planning-level examination of the site and surrounding area based on a variety of information sources and field reviews. The analysis will influence the development of potential improvement options intended to address the identified areas of concern.

1.1. Study Area

Yaquina Head ONA is a 100-acre protected area managed by the BLM and officially designated by the United States Congress to provide for the conservation and development of the scenic, natural, and historic values of the area; the continued use of the area for education, scientific study, and public recreation; and protection of the wildlife habitat of the area.

Yaquina Head ONA is located on the central coast of Oregon at the north end of the City of Newport in Lincoln County. The ONA is located on a headland extending nearly 1 mile into the Pacific Ocean. At the point of the basalt headland is the Yaquina Head Lighthouse, Oregon's tallest lighthouse.

The ONA is accessible via Lighthouse Drive which is a 1-mile-long, two-lane road that begins at the intersection with the Oregon Coast Highway (US Highway 101 [US 101]) at Mile Post (MP) 137.61. The ONA boundary begins about 0.2 mile west of the intersection. **Figure 1.1** presents the Yaquina Head ONA study area. The ONA site and the Lighthouse Drive corridor starting from the US 101 intersection serve as the primary focus area for this study, although parking facilities and multimodal corridors outside the Yaquina Head ONA boundary are also considered in the context of connectivity and access for ONA visitors.

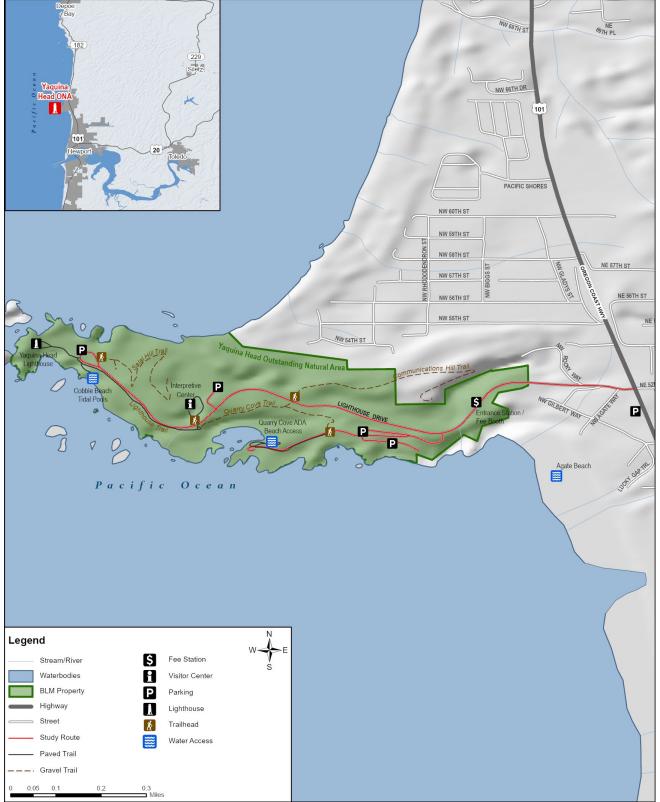

Figure 1.1: Study Area

1.2. Background and Site History

The Yaquina Head Lighthouse (originally called the Cape Foulweather Light at Yaquina Point) was built in 1872. It is just one in a string of lighthouses strategically planned along the Pacific Coast by the US Lighthouse Service to allow mariners to sail the rocky coastline after dark.

In the early days, the area was wilderness with limited access to the lighthouse. The US Lighthouse Service extended a rough wagon road to bring supplies from the docks at Newport to the light station at Yaquina Head traveling partially along Agate Beach. Construction materials and supplies were mainly delivered to the small cove just south of the headland, where workers hauled them up the bluff, eventually using a tramway built in 1885 at present-day Cobble Beach. Along with the construction of the lighthouse and its associated oil house, a large dwelling for two keepers and their families was built east of the lighthouse tower. Other structures included a smaller keeper's dwelling, barn, water tank, cisterns, and a workshop. Keepers and their families raised livestock and tended a kitchen garden to supply herbs, fruits, and vegetables. As the wagon road gradually improved, early automobiles brought increasing numbers of visitors to the lighthouse and reduced the need for the keepers to tend a garden and raise livestock.

In 1966, a computer was installed at Yaquina Head Lighthouse and a resident keeper was no longer needed on the grounds. The unoccupied keeper's quarters eventually fell into disrepair and were eventually removed in 1984. Today, only the lighthouse, oil house, water tank, and garden remain at the site.¹

Between 1917 and 1983, quarrying activity removed huge amounts of basalt rock from Yaquina Head, carving out present-day Quarry Cove and the site of the Interpretive Center. Basalt rock from the quarries was crushed into gravel and used for various road construction projects, including US 101. In the 1970s, nearby residents expressed concerns about the impacts of the quarry activity, including the changing shape of the headland.² On March 5, 1980, US Congress designated about 100 acres of Yaquina Head as an Outstanding Natural Area to protect the unique scenic, scientific, educational, and recreational values of the lands. BLM now acts as caretaker for the site, conserving and protecting its natural values for all to enjoy. Ongoing efforts are focused on eliminating non-native vegetation and reintroducing native plants to improve habitat for wildlife and preserve the cultural landscape. Yaquina Head ONA also offers space to conduct research, collect data, and house monitoring equipment for many areas of science including geology, paleontology, biology, marine biology, archaeology, history, and social science.³

1.3. Historic Construction and Improvements

Lighthouse Drive

The site layout of present-day Yaquina Head ONA was structured from the existing roadways used by the quarries and previous visitors. The current alignment was designed in 1995 and construction was completed in 1999.

US Highway 101

Table 1.1 contains documentation of past construction projects and roadway improvements on US 101 with work completed at the US 101/Lighthouse Drive/NE 52nd Street intersection based on a review of available asbuilt drawings provided by ODOT.

Table 1.1: US Highway 101 Historic Improvements

1.4. Recent and Planned Projects

Lighthouse Improvements

In 2005, BLM and its partners completed a full restoration of the lighthouse tower and oil house. The restored exterior and interior now match the condition and appearance of the original lighthouse.

In the spring of 2021, BLM constructed new concrete slab observation decks surrounding the lighthouse to replace the former wooden decking and added decorative rock-faced walls and railings. The asphalt path to the lighthouse from the parking lot was replaced with concrete sidewalks. The project also included exterior paint and a mineral coating of the lighthouse as well as a full structural investigation.⁴

Cobble Beach Stairway Replacement

In 2019, a proposed action⁵ was authorized to replace aging, wooden infrastructure in order to maintain a safe visitor experience at Yaquina Head ONA. The action included replacing the Cobble Beach stairway and observation deck. The existing stairway at Cobble Beach, constructed in 1994, is failing due to decomposing wood and metal components and slope erosion. Small landslides and general erosion have exposed several of the buried concrete footers of the stairway. The proposed stairway would be constructed using galvanized steel, stainless steel, and cedar. Alignment of the stairs would be modified for a straighter route while maintaining the general style of the existing stairway, using a short section of stairs with landings for rest and interpretative opportunities.

ITS Demonstration Project

A proposed Memorandum of Agreement (MOA) between the US Fish & Wildlife Service (USFWS), BLM, and ODOT states that USFWS will install intelligent transportation systems (ITS) technologies at Yaquina Head. The MOA is a result of an FHWA Task Order to implement and evaluate an ITS demonstration project at two Oregon Coast Sites – Cape Meares National Wildlife Refuge and Yaquina Head ONA. For Yaquina Head, the proposed equipment consists of vehicle detection sensors at the site entrance, dynamic message signs (DMS) on US 101, and large-screen displays at the Yaquina Head entrance station. The ITS project is intended to process information from the vehicle detection sensors to display parking availability on the DMS, various websites, or other public dissemination media. Ultimately, the MOA was tabled due to landslides cutting off road access to

the proposed site. Still, there is a high level of interest by the various parties on the need for improved wayfinding and guide signs on the highways approaching the two sites.

1.5. Existing Plans and Regulations

Several local plans outline goals, objectives, and proposed improvements related to the transportation system in and around the study area. The following sections provide a summary of existing planning documents and regulations relevant to Yaquina Head ONA.

Newport Transportation System Plan Update (2022)

The Newport Transportation System Plan⁶ (TSP) updates the city's previous plan which was adopted in 2012. The TSP is required by Oregon Statewide Planning Goal 12 – Transportation which is intended to promote the development of safe, convenient, and economic transportation systems designed to reduce reliance on the automobile. As the guiding document for local TSPs, the Oregon Transportation Plan⁷ establishes goals, policies, strategies, and initiatives addressing the core challenges and opportunities facing transportation in Oregon. The goals and policies are further implemented by various modal plans, including the Aviation System Plan, Bicycle and Pedestrian Plan, Freight Plan, Highway Plan, Public Transportation Plan, Rail Plan, Transportation Options Plan, Transportation Safety Action Plan, and the Statewide Transportation Strategy.⁸ These plans, and their relevance to the local transportation system, are discussed in the TSP's Technical Memo 2 – Plan Review Summary dated May 31, 2019. Several local plans, policies, and regulations are also summarized in the document.

The TSP analysis focused on the areas of Newport within the Urban Growth Boundary (UGB) and north of the Yaquina Bay bridge, including detailed analysis of the pedestrian, bicycle, transit, and motor vehicle systems. The US 101/NE 52nd Street/NW Lighthouse Drive intersection was 1 of 20 intersections analyzed in detail. The intersection is noted as having high pedestrian stress, low bicycle stress, and a high critical crash rate with 11 of 15 crashes occurring over a 5-year analysis period causing injuries. The intersection is also shown to operate at a level of service (LOS) C under summer 2019 existing conditions (30 HV¹) and meets adopted mobility targets based on vehicle-to-capacity ratios. A future conditions assessment predicts that the intersection will operate at LOS E and exceed mobility targets by 2040. This condition is noted as potentially having a negative effect on freight operations. In general, parallel routes to US 101 for north and southbound traffic in Newport are needed to alleviate congestion and enhance connectivity. Areas identified by the public as critical pedestrian needs include the NW Oceanview Drive corridor, the Oregon Coast Trail (including near Yaquina Head), and existing pedestrian crossings on US 101.

A vision statement, coupled with several goals and polices, provides a framework for development of the TSP. The goals include the following.

- Goal 1: Safety Improve the safety of all users of the system for all modes of travel.
- **Goal 2: Mobility and Accessibility** Promote efficient travel that provides access to goods, services, and employment to meet the daily needs of all users, as well as to local and regional major activity centers.

¹ 30 HV = 30^{th} highest annual hour of traffic. The 30 HV period is the typical analysis and design period to account for recurring peak seasonal trends (while not accounting for extreme peaks due to special events or incidents). The 30 HV development process for existing conditions includes determination of the system peak (AM and PM), and seasonal adjustments.

- **Goal 3: Active Transportation** Complete safe, convenient, and comfortable networks of facilities that make walking and biking an attractive choice by people of all ages and abilities.
- **Goal 4: Grow the Economy** Develop a transportation system that facilitates economic activity and draws business to the area.
- **Goal 5: Environment** Minimize environmental impacts on natural resources and encourage lowerpolluting transportation alternatives.
- **Goal 6: Support Healthy Living** Support options for exercise and healthy lifestyles to enhance the quality of life.
- **Goal 7: Prepare for Change** Ensure that the choices being made today make sense at a time when Newport is growing, and the transportation industry is rapidly changing.
- Goal 8: Fiscal Responsibility Sustain an economically viable transportation system.
- **Goal 9: Work with Regional Partners** Partner with other jurisdictions to plan and fund projects that better connect Newport with the region.

In addition to the goals outlined above, the following set of supplemental strategies and guidelines were developed to address specific issues of concern within the Agate Beach area of the City.⁹

- Provide options for local street sections that consider the stormwater management needs of the Agate Beach area.
- Plan for local street connections adjacent to existing coastal routes given future erosion concerns.
- Evaluate safe crossing opportunities of US 101 in Agate Beach.
- Explore options to provide pedestrian and bicycle facilities on US 101 in Agate Beach.
- Explore options for a connection for pedestrians and bicyclists in Agate Beach to areas further south in the City.

To address the defined goals for the Agate Beach area, the TSP recommends the following projects listed in **Table 1.2**.

| Project ID | Location | Description |
|---------------|--|---|
| TR2 | US 101 (North) NW Oceanview Drive to North UGB | Construct a shared use path on the east side of US 101. Sidewalk infill will also be completed on the west side south of NW 60th Street. Shared use path project should be consistent with previous planning efforts (e.g., Agate Beach Historic Bicycle/Pedestrian Path, Lighthouse to Lighthouse Path). |
| TR3 | US 101 (from NW Lighthouse Drive to NW Oceanview Drive) | Construct a shared use path on the west side of US 101, with sidewalk infill on the east side. Shared use path project should be consistent with previous planning efforts (e.g., Agate Beach Historic Bicycle/Pedestrian Path, Lighthouse to Lighthouse Path). |
| TR5 | NW Lighthouse Drive US 101 to End | Construct a shared use path on one side only and other improvements as identified by the BLM/FHWA. Note pedestrian/bicycle crossing improvements may be needed at the intersection of US 101/NW Lighthouse Drive. |
| TR7 | NW Rocky Way (from NW 55th Street to NW Lighthouse Drive) | Construct a shared use path and other improvements as identified by the BLM/FHWA. |
| TR8 | NW Lighthouse Drive (from US 101 to terminus) | Construct a shared use path on one side and other improvements as identified by the BLM/FHWA. |
| CR3 | NW 55th Street/US 101 | Install an enhanced pedestrian and bike crossing to connect to the shared-use path on the east side of US 101 |

Yaquina Head ONA Recreation Area Management Plan (Cancelled, 2018)

In 2016, BLM began the process of developing a *Recreation Area Management Plan* and Environmental Assessment for Yaquina Head ONA.¹⁰ The plan would have been the first for the site since the 1990s. The plan was intended to set management direction over a 20-year planning horizon to address identified issues, accommodate increasing numbers of visitors, and set a vision for the site in the future. However, the plan was withdrawn in August 2018.

Greater Newport Area Vision 2040 (2017)

The *Greater Newport Area Vision 2040¹¹* is the community's vision for the year 2040. The vision is intended to guide the City of Newport and its public, private, civic, and community-based partner organizations in the cultivation of an "enterprising, livable, dynamic, affordable, educated, safe, healthy, collaborative, and inclusive" community in the future. Vision 2040 is organized into 3 tiers: the overarching vision, focus area visions, and focus area vision strategies. The 6 focus areas are listed below and are supported by specific strategies, all intended to cohesively achieve the overall vision. No specific strategies are listed relating to Yaquina Head ONA, but general protection of the natural environment and a robust multimodal transportation system are important components of the vision.

- Enhancing a Livable Region
- Preserving and Enjoying Our Environment
- Creating New Businesses and Jobs
- Learning, Exploring, and Creating New Horizons
- Improving Community Health and Safety
- Fostering Collaboration and Engagement

Lincoln County Multi-jurisdictional Natural Hazards Mitigation Plan (2015)

Lincoln County developed the *Multi-jurisdictional Natural Hazards Mitigation Plan*¹² to prepare for the longterm effects resulting from natural hazards including coastal erosion, drought, earthquake, flood, landslide, tsunami, volcano, wildfire, windstorm, and winter storm. The plan is intended to assist Lincoln County in reducing the risk from natural hazards by identifying resources, information, and strategies for risk reduction as well as to guide and coordinate mitigation activities throughout the county. The plan provides a risk assessment consisting of 3 phases (hazard identification, vulnerability assessment, and risk analysis) to develop mitigation strategies to decrease the risk of disaster. With considerations for past historical events, the probability of future occurrence, the vulnerability to the community, and the maximum threat, windstorm, winter storm, Cascadia earthquake, wildfire, and local tsunami rank as the top hazard threats to the county. To guide mitigation efforts, the plan defines a mission, 11 goals, and action items to be implemented by the coordinating agencies.

Pertinent to this study, it is noted that the area around Yaquina Head and Moolack Beach is particularly vulnerable for coastal erosion. Additionally, because of its role in defining and supporting the community, the Yaquina Head Lighthouse is identified as an important historic resource to protect from the impact of disasters.

Ten Year Update on Lincoln County, Oregon's Economy (2014)

Starting in the early 1990s, the Oregon Coastal Zone Management Association (OCZMA) commissioned a series of economic analysis and social implication studies about the Oregon Coast. The most recent OCZMA study was published in 2006 and was based on data from 2003. In 2014, the Lincoln County Commissioners funded the *Ten Year Update on Lincoln County, Oregon's Economy*¹³, an update of the 2006 OCZMA study solely for Lincoln County, to develop locally relevant economic information to improve local government decision making and aid in economic development efforts. The analysis provides a summary of changes in the county's economy over a 10-year period, including effects of the 2008 economic depression.

Over the analysis period, the county experienced a 4 percent increase in population while Newport increased by 5 percent. The primary economic sectors in the county include commercial fishing, agriculture, timber, and tourism. The report also notes a dramatic increase in the marine science and education sector and overall decrease in the local, state, and federal government sector. Other factors such as employment rates, income levels, housing availability, and age are also discussed in the report as economic indicators. The analysis concludes that Lincoln County is well positioned to meet economic development challenges.

Agate Beach Neighborhood Plan (1997)

The Agate Beach Neighborhood Plan¹⁴, completed in 1997, provides a framework for the management of change and promotion of growth as the area experiences new development and redevelopment. The Agate Beach Neighborhood is defined as the area bordered by the Pacific Ocean to the west, the Newport Urban Growth Boundary to the north and east, and the Agate Beach Golf Course/NW 43rd Street to the south. The plan provides a thorough review of existing environmental resources and land use as well as a plan for future development and infrastructure improvements. At the time of the plan, it was recommended that the US 101/Lighthouse Drive/NE 52nd Street intersection be signalized, an improvement that has since been completed. The plan also recommended several bicycle and pedestrian improvements including widening NE and NW 52nd Street (Lighthouse Drive) to provide a bike lane and sidewalks. As a general guide for future development, the plan provided the following 3 goals, each with additional supporting policies.

- **Goal 1:** To foster a sustainable urban living environment and to seek the maintenance and improvement of the character of the neighborhood for its people.
- **Goal 2:** The built environment will consider their compatibility with the neighborhood and strive to improve it.
- **Goal 3:** Further the various infrastructure plans developed and adopted by the City by requiring developers to comply to the greatest extent possible with those plans.

Newport Comprehensive Plan (1991)

The *City of Newport's Comprehensive Plan*¹⁵ is designed to guide the development of land within the city limits and to coordinate with Lincoln County the development of those lands outside the city limits but within the UGB. The plan also establishes the goals, policies, and means by which Newport should grow over a 20-year planning horizon. The goals address the Oregon Statewide Planning Goals including physical description, history, natural features, water quality, noise quality, energy conservation, solid waste, wetlands, and aggregate/mineral resources. In addition, the plan establishes the policies for other affected agency

involvement in the development of public and private property. The plan has been amended several times by various city ordinances, with the most recent ordinance being passed August 4, 2020.

The plan identifies the Yaquina Head Lighthouse as a site of historical and scenic significance and concludes that the site and lighthouse should be preserved, while other outbuildings are not significant and are not worthy of preservation. It states that any modification or alteration to the lighthouse or the site shall be reviewed by the Planning Commission to assure the maintenance of its historic value consistent with the provisions contained in the City of Newport Zoning Ordinance. The Ernest Bloch Home is also identified as a site of historical importance and a bronze plaque mounted on a boulder located at the junction of Lighthouse Drive and US 101 marks the site.

Additionally, the plan notes that Yaquina Head is 1 of 2 coastal headlands in Newport, and the most prominent. It is formed by the Cape Foulweather basalt which was mined in the 1900s. The only known mineral resource within the City of Newport is the Yaquina Head Quarry which was originally opened by the city in the 1920s and sold to a private party in the 1940s. The site has since been purchased and reclaimed by BLM.

The plan identifies large landslides on both the north and south sides of Yaquina Head. The landslide on the south side has made several buildings unusable. In Agate Beach, subsurface drainage is restricted. Additionally, the cliffs and offshore rocks at Yaquina Head are identified as significant shoreland and wetland biological habitats. However, due to the public ownership of Yaquina Head, the rocky shore intertidal marine environment wetland is not expected to be impacted by development. Lastly, the seaward exposure of the headland is included as a major visual resource of the Newport area. After being identified as an area with potential for an exceptional coastal experience, Yaquina Head was designated as an ONA by Congress.

National Parks and Recreation Act (1978)

On March 5, 1980, US Congress amended the *National Parks & Recreation Act of 1978*¹⁶ to establish Yaquina Head Outstanding Natural Area. Under Section 119¹⁷, the law established Yaquina Head Outstanding Natural Area "in order to protect the unique scenic, scientific, educational, and recreational values" of the land. The law designates the Secretary of the Interior to administer the area in accordance with laws and regulations applicable to public lands "in such a manner that will best provide for (a) the conservation and development of the scenic, natural, and historic values of the area; (b) the continued use of the area for purposes of education, scientific study, and public recreation [...], and (c) protection of the wildlife habitat of the area."

The Secretary is authorized to issue permits for quarrying of materials from the area on the condition that the lands be reclaimed and restored. However, approximately 18.1 acres of the ONA are reserved for lighthouse purposes under Executive Order of June 8, 1866, and are withdrawn from mineral leasing laws and other provisions. The law also authorizes the Secretary to issue permits for installation and field testing of an experimental wind turbine generating system. Additionally, the Secretary is required to develop and administer a program for the reclamation and restoration of all lands previously affected by quarrying operations.

2.0. TRANSPORTATION SYSTEM

2.1. Physical Features and Operational Characteristics

Lighthouse Drive serves multiple residential and commercial areas and provides access to Yaquina Head ONA. The following sections discuss physical features and operational characteristics of the roadway and adjacent parking areas and multimodal corridors.

2.1.1. Roadway Surface

The entirety of Lighthouse Drive is paved from the US 101 intersection to the lighthouse parking lot. From the US 101/Lighthouse Drive intersection to the Yaquina Head ONA entrance gate, the widths on Lighthouse Drive are generally 21 feet with minimal shoulders. Past the entrance gate, the widths on Lighthouse Drive vary from 24 feet to 35.5 feet in width with 1.5-foot to 6-foot shoulders. The widest stretch of roadway occurs just beyond the entrance gate. The narrowest section of roadway within Yaquina Head ONA is 12 feet and occurs on the Quarry Cove access road beyond the upper parking lot.

2.1.2. Intersecting Facilities and Traffic Control

Based on field review and aerial photography, **Table 2.1** lists intersecting vehicular facilities along Lighthouse Drive, including a variety of public roadways, private approaches, recreational accesses, and parking areas.

Outside the Yaquina Head ONA, existing traffic control on Lighthouse Drive consists of a traffic signal at the US 101/Lighthouse Drive intersection and stop signs on some approach roadways including NW Agate Way, the Hill Buffet and Grill driveway, and NW Rocky Way to the north. Within the Yaquina Head ONA, stop signs are placed on the Quarry Cove and Interpretive Center access roadways.

| Intersecting Roadway/Approach | Туре | Side of Roadway | Traffic Control | Within ONA Boundary? |
|------------------------------------|---------------------|-----------------|-----------------|-------------------------|
| US Highway 101 | Public road | Both | Traffic Signal | No |
| NW Agate Way | Public road | South | Stop Sign | No |
| The Hill Buffet and Grill driveway | Private approach | North | Stop Sign | No |
| NW Rocky Way | Public road | South | None | No |
| NW Rocky Way | Public road | North | Stop Sign | No |
| NW Gilbert Way | Private approach | South | None | No |
| Camp host driveway | Private approach | South | None | Yes |
| Quarry Cove access road | Recreational access | South | Stop Sign | Yes |
| Communications Hill Trail | Recreational access | North | None | Yes |
| Yaquina Head Interpretative Center | Parking area | North | Stop Sign | Yes |

2.1.3. Traffic Circulation and Parking

Within the Yaquina Head ONA, vehicular traffic uses Lighthouse Drive to enter the site and to reach key destinations. Additionally, the Quarry Cove roadway provides access to the upper and lower parking areas at Quarry Cove. Several parking opportunities are available both within the site and the surrounding area to serve visitors. The total number of parking stalls provided in each lot is summarized in **Table 2.2** at the end of this

section. **Figure 2.1** provides a map showing the locations of the available parking areas. Stakeholders have noted a desire for additional large vehicle and ADA parking stalls within the Yaquina Head ONA.

Entrance Station Circulation

After entering the Yaquina Head ONA site, visitors proceed to the entrance station where they are greeted by a ranger and either pay an entrance fee or present a valid pass. For credit card purchases, visitors are directed to an automated fee machine (AFM) kiosk located just to the west of the main booth.

During peak visitation periods, a traffic queue extends along Lighthouse Drive and sometimes reaches back to the US 101 intersection, according to BLM staff.¹⁸ To expedite visitor processing during these times, BLM staff conduct what is called "line busting" which involves standing in live traffic between traffic cones and directing pass holders to proceed to the left side of the booth through one of the lanes typically used for outbound traffic. This can create a conflict with pedestrians walking from the AFM kiosk back to the booth to pick up a pass from the ranger.

Occasionally, drivers decide not to proceed into Yaquina Head ONA and attempt to turn around before the entrance station. These maneuvers are generally not safely accommodated by the existing traffic control and entrance configuration.

Quarry Cove Circulation and Parking

The Quarry Cove access road is a single-lane, one-way couplet serving vehicles entering and existing the Quarry Cove recreational area. A pullout is provided on the south side of the couplet that is used for parking. In addition, 2 separate paved parking lots are available for visitor use off the Quarry Cove access road. The northern parking lot, referred to as the upper lot, consists of 12 angled parking stalls, 3 perpendicular parking stalls, 2 Americans with Disabilities Act (ADA)-compliant stalls, and 3 large vehicle parking stalls. Restroom facilities are provided as well as dedicated crosswalks with access to and from the upper and lower Quarry Cove Trails. The configuration of this lot is confusing and lacks clear direction for vehicle circulation. One-way signs appear to point in opposing directions, and some small personal vehicles were observed circulating through areas striped as large vehicle parking stalls. Additionally, BLM staff have reported that visitors sometimes cross the solid yellow line into the oncoming circulation lane in order to reach the gated ADA access roadway.

An additional lot, referred to as the lower lot, is provided on the southern side of the Quarry Cove access road. This narrow lot provides 31 perpendicular parking stalls and 2 ADA parking spots. A small turnaround area is provided at the eastern end of the lot. This lot generally does not accommodate large vehicles due to the narrow configuration.

Interpretive Center Circulation and Parking

The Interpretive Center parking lot is a popular paved parking area for visitors. It offers 126 perpendicular parking stalls, 4 of which are designated for Official Vehicles Only. The lot also provides 6 angled parking stalls and 8 ADA parking stalls. A lane designated for large vehicle parking is provided parallel to the parking lot entrance lane, and some drivers confuse the parking lane for a circulation route. The lane provides space for approximately 3 large vehicles. BLM staff have indicated that large vehicles sometimes park in the angled stalls near the maintenance building as well as in undesignated areas along the outer ring of the lot during busy times.

When the lighthouse parking area is full, BLM uses traffic cones to channel westbound vehicles from Lighthouse Drive into the Interpretive Center parking lot. This configuration is used to circulate visitors through the Interpretive Center lot in the hope that visitors will park and walk down to the lighthouse rather than driving. Once inside the Interpretive Center lot, the intended circulation pattern directs visitors around the outside edge of the lot in the counterclockwise direction. Visitors often express frustration with the cones and sometimes perform unsafe maneuvers to avoid circulating or parking in the Interpretive Center lot. Some drivers have been observed swerving around the cones to continue on Lighthouse Drive, while other drivers enter the parking lot and immediately make a U-turn in order to leave the lot and continue west on Lighthouse drive. These maneuvers result in increased potential for user conflicts within the parking area and on Lighthouse Drive.

A small pet relief area is provided northeast of the parking lot with a short loop trail/mowed corridor. Access to the lighthouse is provided from this lot via the Lighthouse Trail which wraps around the Interpretive Center, crosses under Lighthouse Drive, and continues along the south edge of Lighthouse Drive. Some visitors were observed walking from the parking lot to the intersection with Lighthouse Drive and then continuing west along Lighthouse Drive, despite the lack of dedicated pedestrian facilities on this route.

Lighthouse Circle Circulation and Parking

The lighthouse parking area is a one-way loop with angled parking around the outside edge. Access to the Yaquina Head lighthouse and Cobble Beach are provided on the western edge of this lot. A small area with additional parking is also provided off the east side of the parking lot, providing direct access to Salal Hill Trail, restroom facilities, and a small maintenance building. In total, the lot provides 26 angled parking stalls, 11 perpendicular stalls, 3 designated ADA stalls, 2 stalls for Official Vehicles Only, and 3 stalls designated for large vehicle parking. Sidewalk is provided along the outside edge of the parking lot, however pedestrians are often observed walking across the center island and within the vehicle travel lanes as a shortcut to reach their desired destination.

Ernest Bloch Memorial Wayside Parking

The Ernest Bloch Memorial Wayside Parking area is located adjacent to US 101 and is accessed from NW Gilbert Way. The lot offers 65 perpendicular parking stalls, 3 large vehicle stalls, and 3 designated ADA stalls. A crosswalk is provided across NW Gilbert Way allowing access from adjoining sidewalks next to the parking area. Some visitors choose to park in this area and walk into the Yaquina Head ONA or down to Agate Beach.

Informal Parking

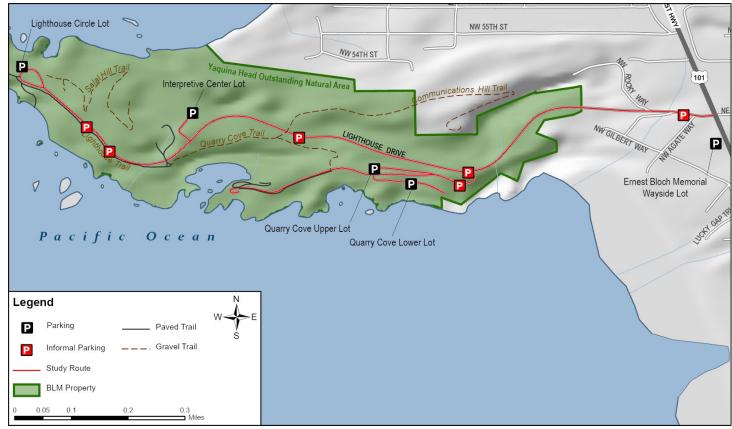

Several informal parking areas are located adjacent within the site, including along the Quarry Cove access road and Lighthouse Drive. A small parking area exists approximately 130 feet west of the US 101/Lighthouse Drive intersection that offers approximately 11 parking stalls and allows visitors to walk down to the beach or to Yaquina Head ONA. The pullouts on Lighthouse Drive within the ONA are used by visitors for parking, although BLM staff indicated these pullouts are provided as short-term viewpoints and are not intended for long-term parking purposes. Staff also noted concerns about visitors attempting to park in these pullouts with the end of their vehicles still partially in the roadway. Some visitors, especially hang/paragliders, also park in the widened area at the base of Communications Hill.

Table 2.2: Available Parking

| Parking Lot | Perpendicular Stalls | Angled Stalls | ADA Stalls | Large Vehicle Stalls | Official Vehicles Only Stalls | Total Stalls |
|-------------------------------|-------------------------|------------------|---------------|-------------------------|----------------------------------|-----------------|
| Quarry Cove (Upper) | 12 | 3 | 2 | 3 | | 20 |
| Quarry Cove (Lower) | 31 | | 2 | | | 33 |
| Interpretive Center | 122 | 6 | 8 | ~3 | 4 | 143 |
| Lighthouse Circle | 11 | 26 | 3 | 2 | 3 | 45 |
| Ernest Bloch Memorial Wayside | 65 | | 3 | 3 | | 71 |
| Informal Parking* | | 11 | | | | 11 |
| Total Stalls | 241 | 46 | 18 | 11 | 7 | 323 |

*Only marked parking stalls are included.

2.1.4. Signs

An inventory of all existing signs within Yaquina Head ONA was conducted during field review efforts. A handheld GPS unit was used to collect location data on all signs. The GPS coordinates were imported to an Excel spreadsheet to display the collected data. For each sign, the height, width, and mount height were noted. The general sign condition was rated as either poor, fair, or good, and any specific comments were noted. Additionally, the post type, shape, height, diameter, and offset were collected. **Appendix B** contains the sign inventory and all applicable data.

2.1.5. Hydraulics

Lighthouse Drive is located on a headland projecting into the Pacific Ocean. There are no prominent surface water features that cross or run parallel to Lighthouse Drive. However, based on data from the National Oceanic and Atmospheric Administration Continually Updated Shoreline Product, 3 intermittent unnamed streams cross Lighthouse Drive. These streams, by definition, only hold water during wet portions of the year.

The first stream crosses Lighthouse Drive approximately 250 feet west of the US 101 intersection. A water access is located within the vicinity of the crossing, however the access appears to be associated with a city water utility line. The second stream crosses Lighthouse Drive at the entrance station. No drainage features were identified based on available as-builts and field survey. The third stream crosses Lighthouse Drive near the Interpretive Center. Again, no drainage features were identified.

An additional 2 streams cross US 101 within the broader study area. The first is an unnamed perennial stream crossing US 101 approximately 800 feet south of the intersection with Lighthouse Drive. The second stream, Little Schooner Creek, crosses US 101 approximately 1,200 feet south of the intersection and is also a perennial stream. No drainage features were identified based on available survey.

2.1.6. Bridges and Culverts

Based on a review of visible roadway features, without the use of subsurface technology or excavation, only 1 culvert was identified on Lighthouse Drive. The culvert was located approximately 200 feet west of the Quarry Cove entrance roadway. A few drainage culverts are also located near the Interpretive Center in the vicinity of Lighthouse Trail. Supplemental review of available as-built drawings confirms no other hydraulic features occur within the Yaquina Head ONA boundary. As-built drawings for the portion of Lighthouse Drive from US 101 intersection to the Yaquina Head ONA entrance were not available for review.

2.1.7. Right-of-Way

The State of Oregon owns at least 25 feet of right-of-way on each side of the Lighthouse Drive centerline starting at the intersection with US 101 and extending west approximately 50 feet. Right-of-way widths vary slightly along this segment, with a maximum of 75 feet of right-of-way on Lighthouse Drive at the intersection.

Twenty-five feet of state right-of-way extends approximately 150 feet further to the west along the south side of the roadway, with 25 feet north of the centerline being City right-of-way along this same segment. This portion of roadway includes a small, informal parking area on the south edge of the roadway partially within state right-of-way and partially within private property.

Moving to the west, the City owns right-of-way along the next 650 feet of Lighthouse Drive, with at least 25 feet on each side of the centerline. The City right-of-way widths vary along this segment, but generally the City-owned right-of-way is 50 feet across the entire roadway. Additionally, the City of Newport owns approximately 50 total feet of right-of-way on NW Gilbert Way and 50 to 100 total feet of right-of-way on NW Rocky Way extending from Lighthouse Drive to NW 55th Street.

To the south, the State of Oregon owns and maintains US 101, with approximately 74 feet of right-of-way on each side of the roadway centerline (for a total of approximately 148 feet).

BLM recently performed a boundary retracement to confirm their property boundary. Right-of-way ownership changes from City to BLM approximately 0.2 mile west of the US 101/Lighthouse Drive intersection. As seen in **Figure 2.2**, the BLM right-of-way is fairly wide with the exception of a pinch point just before the entrance

station, where there is approximately 15 feet between the BLM boundary and the edge of the existing pavement. The northern BLM boundary borders the adjacent subdivisions. A city-owned water tank is also located just north of the BLM boundary and there has been discussion from the City about possibly moving the water tank or replacing it with a pump.

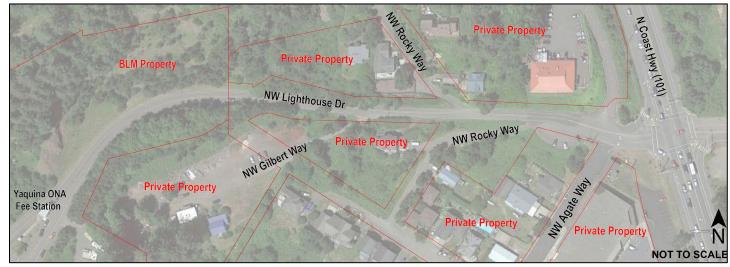

Figure 2.2: Right-of-Way Map

2.1.8. Utilities

Several utilities are located within the Lighthouse Drive corridor including underground telephone, gas, power, water, and sanitary sewer. The utilities are generally located along the roadway centerline with meters located sporadically along the corridor on both sides of the roadway. Overhead power and telephone lines also cross Lighthouse Drive about 400 feet west of the US 101/Lighthouse Drive intersection.

Traffic signals are located in all quadrants of the US 101/Lighthouse Drive intersection. The accompanying electrical boxes are located in the southwest quadrant of the intersection. Based on aerial imagery, overhead power and telephone lines run parallel to US 101 on both sides of the roadway from the intersection south to NW Oceanview Drive and beyond. The overhead utility lines cross US 101 several times throughout this section. Several water meters are also located on both sides of US 101 south of the intersection. The presence of other underground utilities is unknown.

The US Coast Guard maintains the facilities at the top of Communications Hill. The site includes communications equipment for aircraft, a cell phone tower, and research equipment for Oregon State University. The facility once housed communications equipment for ships, but the equipment was removed when ships stopped relying on land-based electronic navigation systems. Two large propane tanks also sit at the top of Communications Hill.

An AFM is located at the entrance gate outside of the fee booth and is used to collect credit card payments. Electrical utilities including a high voltage switch pad, telephone utilities, and a meter are located at the entrance station.

2.1.9. Maintenance Responsibility, Activities, and Vulnerabilities

ODOT is responsible for maintenance of US 101 and the Ernest Bloch Memorial Wayside parking area. The City of Newport is responsible for maintenance of Lighthouse Drive west of the US 101 intersection to the Yaquina Head ONA boundary. BLM is responsible for maintenance of Lighthouse Drive beginning at the Yaquina Head ONA boundary as well as all trails, parking areas, and buildings within the Yaquina Head ONA boundary, except the lens contained within the lighthouse which is operated by the Coast Guard. Radar equipment used by the Federal Aviation Administration (FAA) and the Coast Guard are located on Communications Hill, and access to this equipment must be maintained.

Historical asphalt maintenance records were provided by Yaquina Head ONA staff. The records include contract work dating back to 1998 and more recent maintenance work completed internally by BLM facilities staff. Records show that contract asphalt work was completed in 1998, 2004, 2009, and 2015. Maintenance activities included application of slurry seal, striping, and crack sealing. The most recent contract work involved 8,000 linear feet of crack sealing from the entrance station along Lighthouse Drive to the lighthouse. In 2020, BLM facilities staff completed 13,000 linear feet of crack sealing in the Interpretive Center parking lot, the lighthouse parking lot, and the Quarry Cove parking lot. The curb in the Interpretive Center parking lot was also repainted the same year.

Several locations along the Lighthouse Drive corridor have experienced pavement failures including transverse and longitudinal cracking and sloughing. The cause of these failures is typically a weakened or deteriorating subgrade. This distress on the pavement can be caused by a variety of factors including poor drainage, erosion, frost heave, lack of compaction, or weak materials. BLM staff noted an ongoing issue with sloughing on the Quarry Cove access road, which was previously filled and patched but continues to deteriorate.

2.1.10. Alternative Transportation Facilities and Services

Pedestrian and Bicycles

Multiple pedestrian and bicycle opportunities are provided at Yaquina Head ONA. Visitors entering the site on foot or by bike do not have to pay entrance fees. Once inside the ONA, pedestrian trails range in difficulty and surface type. Bicycles are only allowed on paved areas of the site and on the Communications Hill Trail. **Table 2.3** summarizes trails at Yaquina Head ONA, and **Figure 2.3** displays them graphically.

| Trail Name | Rating | Walking Time | Steepest Grade | Surface Type | Bicycles Allowed? | Wheelchair Accessible? | Notes |
|------------------------------|-------------------|---|-------------------|-----------------|----------------------|---------------------------|--|
| Quarry Cove Trail (Lower) | | | | Paved | | Yes | Access to Quarry Cove ADA Beach Disabled users can drive down to beach |
| Quarry Cove Trail (Upper) | Most Difficult | 10 minutes each way (to Interpretive Center) | 33% | Gravel | No | No | Steep concrete stairs Connection to Communications Hill and Lighthouse Trails |
| Lighthouse Trail | Most Difficult | 10 minutes each way (to Interpretive Center) | 8% | Asphalt | No | Yes | Paved path on south side of Lighthouse Drive separated from the roadway by guardrail Access to Cobble Beach via steep wooden stairs |

Table 2.3: Yaquina Head ONA Pedestrian and Bicycle Trails

OR BLM NWO 1516291(1)

Task Order No. 69056721F000012

| Trail Name | Rating | Walking Time | Steepest Grade | Surface Type | Bicycles Allowed? | Wheelchair Accessible? | Notes |
|------------------------------|-------------------|-------------------------------|-------------------|-----------------|----------------------|---------------------------|--|
| Salal Hill Trail | Moderate | 25-30 minutes roundtrip | 36% | Unimproved | | No | Accessed from lighthouse parking lot behind the keeper's garden leading to a point above the Interpretive Center |
| Communications Hill Trail | Most Difficult | 15 minutes each way | 15% | Gravel Road | Yes | No | Trailhead to hang/paragliding launch sites Primitive trail to water tank and Agate Beach neighborhood |
| Lighthouse Access | | | | Sidewalk | | Yes | •Recently reconstructed sidewalks from lighthouse parking lot to lighthouse and observation decks |

-- Not stated on trail signs.

Source: Bureau of Land Management, Trail Wayfinding signs, viewed on site in May 2021.

Figure 2.3: Yaquina Head ONA Trails

Other designated trails or pedestrian/bicycle routes within the study area are listed as follows.

- <u>Lighthouse to Lighthouse Trail</u>: Lighthouse Drive is featured as part of the 10-mile trail on Newport's published bike maps. The route connects the Yaquina Bay and Yaquina Head Lighthouses traveling mainly on city streets and US 101.
- <u>Oregon Coast Bike Route</u>: US 101 between the northern and southern Lincoln County lines is a designated bike route on the Lincoln County Bicycle Route Map. Bike lanes are provided on US 101 through the study area.
- Oregon Coast Trail: A 362-mile hiking trail follows the Oregon coastline along beaches, state parks, public lands, US 101, city streets, and some easements on private property. Some sections called "gap sections" are identified in areas that are disconnected, inconvenient, unsafe, or inaccessible during certain seasons. The Agate Beach gap section instructs trail users to take 55th Street to US 101 and continue south following signs to Yaquina Head Lighthouse then returning to the beach at the Agate Beach access/parking area.

Concerns regarding pedestrian and bicycle accommodations have been noted and observed within Yaquina Head ONA and the encompassing study area. In general, there is a lack of a continuous, dedicated facility for pedestrians on Lighthouse Drive. As a result, visitors entering the ONA on foot are often observed walking on the roadway up to the entrance station. Additionally, the ONA tends to experience high traffic volumes at locations such as the entrance station, Keeper's Garden, and Lighthouse Circle, all of which lack dedicated crosswalks. While some sidewalk is provided on the Quarry Cove access road, there is a gap in the sidewalk between the pullout on the south side of the couplet and the lower parking lot.

Additionally, there is a general lack of connectivity for multimodal facilities at the US 101/Lighthouse Drive intersection. Several trails and shared use paths exist near the intersection, such as the Lucky Gap Trail that provides access to Agate Beach, a small trail off NW Gilbert Way that provides access to the Ernest Bloch Memorial Wayside, and the Oregon Coast Bike Route on Oceanview Drive. The gaps between these various recreational opportunities result in poor pedestrian and bicycle connectivity in the area.

<u>Transit</u>

Lincoln County Transit provides transit services to the Newport area via a city loop and inter-city routes between Lincoln City, Siletz, Yachats, Corvallis, and Albany.

- The **Newport City Loop** completes a full loop through Newport 6 times each day, 7 days a week. In the evening, an additional southbound run is provided to City Hall. City loop buses are wheelchair accessible with bicycle racks. The closest transit stop to Yaquina Head ONA is Bloch Wayside/52nd Street and is provided by request only. The service fee is a flat fare of \$1 for each ride.
- The **Transit Intercity North County** route provides daily service along the coast in Lincoln County north of Nye Beach. The route is fare-based ranging from \$1 to \$5 depending on the riders' start and end location. Monday through Saturday, the bus completes 5 loops and stops at the US 101/NE 52nd Street intersection by request in the northbound direction only. On Sundays, the bus completes 4 loops and stops at the US 101/NE 52nd Street intersection at 5:29 AM on the first loop of the day and by request on the other 3 loops in the northbound direction only.
- The **Coast to Valley Express** is a service provided through a partnership between Lincoln County Transit and Benton County Transportation. The bus operates 7 days a week with 4 daily runs between Albany, Corvallis, and Newport. From Albany, riders can take the Amtrak Cascades train to Portland; from Corvallis, riders can take the HUT Portland Airport Shuttle to Portland International Airport; and

 A Dial-A-Ride service is also provided within the City of Newport. The buses operate from 8:00AM to 3:30PM Monday through Friday. Reservations are made on a "first-call, first-serve" basis and are restricted to a maximum of 2 stops per person per day. The service is fare-based and costs \$1 for a one-way ride plus \$1 per additional stop.

2.2. Geometric Conditions

Existing roadway geometrics for Lighthouse Drive were evaluated and compared to current standards. As-built drawings from 1995 were available for the segment of Lighthouse Drive extending from the entrance station to the lighthouse parking lot. As-built drawings were not provided for the remaining segment of the Lighthouse Drive corridor from the entrance station to the US 101 intersection. Field review and aerial photography were used to document existing roadway geometrics in this segment.

2.2.1. Design Criteria

YAQUINA HEAD

Traffic Study

The American Association of State Highway Transportation Officials (AASHTO) *Policy on Geometric Design of Highways and Streets (Greenbook)*¹⁹ specifies general design principles and controls that determine the overall operational characteristics of the roadway. Of critical importance to determining design standards is the design speed. AASHTO's manuals provide guidance for design speed based on facility and operating characteristics; however, some judgment is necessary. A facility's design speed and its operating speed may differ. The design speed is a selected speed used to determine the various geometric design features of the roadway. The operating speed is the highest overall speed at which a driver may travel on a given section of roadway under favorable weather conditions and prevailing traffic conditions without at any time exceeding the safe speed as determined by the design speed.

Table 2.4 lists current design standards for local roads according to AASHTO design criteria. The highway design criteria depend on terrain, area context (i.e., urban or rural), and daily traffic volumes. Based on the definitions provided in the *Greenbook*, the Lighthouse Drive corridor appears to be within a rural context with rolling terrain and projected traffic volumes between 400 and 2,000 vpd. This correlates to a likely design speed of 40 miles per hour (mph) on the corridor. Note that the speed limit is signed 25 mph along the corridor.

| | | | Design Criteria | | | | |
|-------------------|-------------------------------|-------------|-----------------|----------------|------------------|--|--|
| | Design Element | | 50 to 250 vpd | 250 to 400 vpd | 400 to 2,000 vpd | | |
| <u> </u> | | Level | 30 mph | 40 mph | 50 mph | | |
| Design Control | Design Speed | Rolling | 30 mph | 30 mph | 40 mph | | |
| ŏ | | Mountainous | 20 mph | 20 mph | 30 mph | | |
| | Design Speed | | 20 mph | 30 mph | 40 mph | | |
| nts | | Level | 8% | 7% | 7% | | |
| Elements | Maximum Grade | Rolling | 11% | 10% | 10% | | |
| Ele | | Mountainous | 16% | 14% | 13% | | |
| Alignment | Vertical Curveture (Kuelue) | Crest | 7 | 19 | 44 | | |
| gnm | Vertical Curvature (K-value) | Sag | 17 | 37 | 64 | | |
| Ali | Stopping Sight Distance (SSD) | | 115 | 200 | 305 | | |
| | Radius | | 76 | 214 | 444 | | |

Table 2.4: Geometric Design Criteria - Local Roads

2.2.2. Roadway Width

The AASHTO Greenbook recommends a minimum roadway width of 26 feet for local roads carrying 400 to 2,000 vehicles per day (vpd) and with a design speed of 40 mph or less. Exceptions to these standards are allowed based on conditions such as topographic constraints and environmental factors as approved by the road owner and maintainer. The *Greenbook* states that alternate design criteria may be considered for minor collectors and local roads that carry 2,000 vpd or fewer in accordance with the AASHTO *Guidelines for Geometric Design of Very Low-Volume Local Roads*²⁰. The *Very Low-Volume Local Roads* guidance recommends roadway widths of 18 feet for new construction of scenic and recreational roadways with design speeds of 15-35 mph. The guidance also states that the cross-section widths of existing roads need not be modified except in those cases where there is evidence of site-specific safety problems.

During summer data collection, 694 vehicles were counted entering Yaquina Head ONA in a single day. To account for vehicles entering and leaving, multiplying the count by 2 yields a total traffic volume of 1,388 vpd. Since this number was collected on a Saturday during the summer, which is considered to be the peak time period for visitors, it is reasonable to assume that Yaquina Head ONA typically experiences daily traffic of less than 2,000 vpd, classifying Lighthouse Drive past the entrance gate as a low-volume road.

Generally, the roadways within Yaquina Head ONA follow the guidance for low-volume local roads as described previously, although the narrow portion of the Quarry Cove access road does not meet the minimum roadway width.

2.2.3. Horizontal Alignment

Elements comprising horizontal alignment include curvature, superelevation (i.e., the bank of the road), and sight distance. These horizontal alignment elements influence traffic operation and safety and relate directly to the design speed of the corridor. AASHTO's design standards for horizontal curves are defined in terms of curve radius, and they vary based on design speed. For a local road with a design speed of 40 mph, the minimum recommended radius is 444 feet with a minimum stopping sight distance (SSD) of 305 feet.

Horizontal curve radii along the Lighthouse Drive corridor were estimated based on aerial photography. Six horizontal curves were identified, and all appear to meet current AASHTO standards based on design speed. The curves on the Quarry Cove access road do not meet the minimum radii standards. However, this portion

of the study area is signed at 15 mph, and none of the horizontal curves are considered to be potential areas of concern.

2.2.4. Vertical Alignment

Vertical alignment is a measure of the elevation change of a roadway. The length and steepness of grades directly affect the operational characteristics of the roadway. The controlling design limits for vertical curves are SSD, vertical curvature (K-value), and maximum grade. Vertical curves can be placed into 2 categories: crest and sag. A crest curve is created at the top of a hill, and a sag curve occurs at the bottom of a hill.

No vertical curvature data for the roadway was available for review. However, during the field review no vertical curves were identified as potential areas of concern.

2.2.5. Sight Distance

Sight distance is the length of roadway visible to a driver and is influenced by the geometry of the road (horizontal or vertical curves) and obstacles alongside the road. Sight distance is commonly defined in 3 ways: passing sight distance, stopping sight distance, and intersection sight distance. In general, the driver of a vehicle should have an unobstructed view and enough distance to perceive, react, and safely stop for or avoid approaching vehicles and other hazards.

Observations during the field review were used to determine locations where limited sight distance is of concern. The 2 curves to the east of Communications Hill were identified as providing limited sight distance due to the density of trees adjacent to the roadway.

2.2.6. Clear Zone

The FHWA defines a clear zone as the unobstructed, traversable roadside area that allows a driver to stop safely or regain control of a vehicle that has left the roadway. The width of the clear zone is based on traffic volumes, speeds, and slopes. Clear roadsides consider both fixed objects and terrain that may cause vehicles to roll over. For local roads, FHWA recommends a minimum clear width of 7 to 10 feet. While no cross-sectional data were available to evaluate clear zone distances, most of Lighthouse Drive generally appears to have adequate recoverable side slopes and minimum clear zones. It is not always feasible to provide wide clear zone distances or side slopes due to the environment along the roadway, such as in cases of steep embankments or heavy tree growth. Guardrail is in place along Lighthouse Drive in areas without sufficient side slopes.

2.3. Existing Traffic Conditions

Lighthouse Drive serves a variety of access purposes including residential, commercial, and recreational. Heading west from the US 101 intersection, approximately the first 0.1 mile of roadway contains several approaches that provide access to residential areas and businesses. The remainder of Lighthouse Drive generally serves users who are intending to visit Yaquina Head ONA. Passenger cars, delivery trucks, buses, RVs, emergency vehicles, bicycles, and pedestrians are all common on the roadway.

2.3.1. Visitor Entry Data

The BLM staff at the Yaquina Head ONA entrance station collect visitor entry data each day during regular operating hours. The staff tracks entering users and classifies them based on payment type, transportation mode, and visitor type. To approximate the total number of visitors, BLM uses a generalized estimate of 3 visitors per vehicle. This estimate is largely supported by a recent study which found that, on average, there are 2.79 visitors per vehicle at the ONA.²¹ Upon entry, BLM classifies vehicles as either a recreational or a non-

recreational vehicle. Non-recreational vehicles include BLM staff, delivery vehicles, utility and maintenance vehicles, contractors, and other non-visitor vehicles. Recreational vehicles include all other vehicles which are assumed to be occupied by visitors. Only recreational vehicles are included in the visitation count.

Monthly visitor entry data were provided for the years 2015 through 2019. Daily breakdowns of visitor data were also provided for several days of interest anticipated to reflect peak visitation including the second Saturday of spring break, the last Sunday of May, last Saturday of June, all Saturdays and Sundays in July, first Saturday in August, and the first Sunday in September. Data were also provided for the peak vehicle visitation day of each year. The daily counts do not include vehicles paying by credit or debit card who must use the AFM as this data is only compiled monthly. As such, monthly counts are more representative of total visitation. The daily counts give a more detailed breakdown of transportation mode, including vehicles, pedestrians, and bicycles, and pass holding status.

The number of visitors recorded per month at the site over the 5-year period from 2015 to 2019 is displayed in **Figure 2.4.** As shown in the figure, visitation generally begins to increase in May with peak visitation observed in July. Numbers begin to decrease In October, and low volumes are recorded throughout the winter season. A slight increase in visitation is observed in the month of March, potentially corresponding to spring break and the spring gray whale migration.

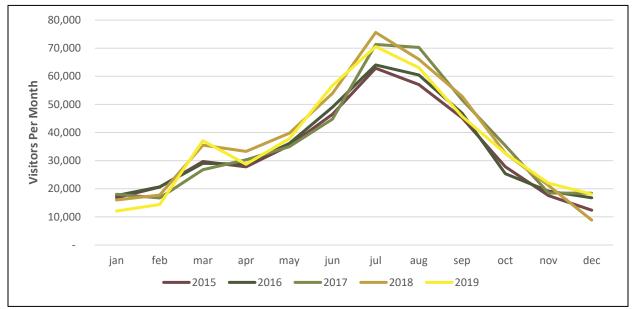

Figure 2.4: Visitors Per Month

Figure 2.5 displays the annual visitation trends at Yaquina Head from 2015 to 2019. Visitor numbers exhibited a steady increase between 2015 and 2018 with a decline experienced in 2019. Over this 5-year period, visitation increased at a compound annual growth rate (CAGR) of 2.8 percent per year. However, it is relevant to note that a government shutdown occurred from December 22, 2018, to January 26, 2019. While the site partially reopened on January 12 with no fee collection, it is appropriate to assume that these circumstances likely impacted the number of visitors and recorded volumes.

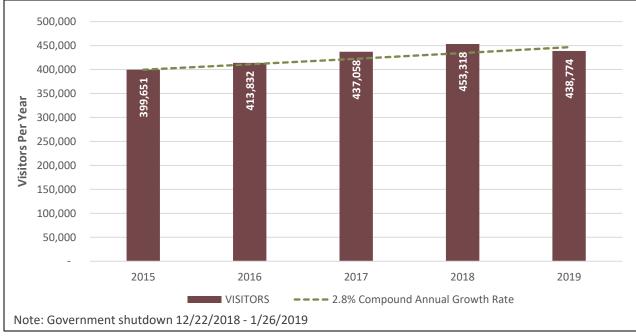

Figure 2.5: Visitors per Year

Figure 2.6 displays 2015 to 2019 average visitor volumes for select days, which were analyzed with the intent of understanding peak visitation. Approximately 2,500 people visit Yaquina Head on a typical day during the peak season. Visitation spikes occur over the weekends of Memorial Day and July 4th and at the end of July. Of the dates reviewed, Yaquina Head ONA generally experienced higher visitation on Saturdays compared to than Sundays.

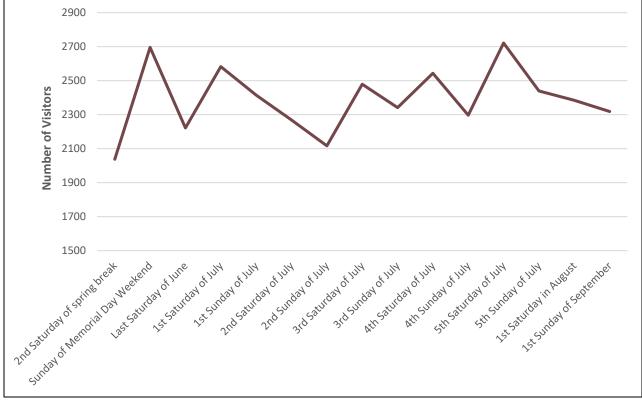

Figure 2.6: Average Daily Visitor Volumes During Peak Periods

Table 2.5 displays the maximum, minimum, and average visitor volumes by transportation mode for the peak visitation days analyzed from 2015 through 2019. Total visitors are calculated by summing the pedestrians, bicyclists, and recreation vehicles, assuming 3 visitors per recreation vehicle. Of the dates reviewed, the maximum number of visitors was recorded on Friday, July 13, 2018, and the minimum number of visitors was recorded on Sunday, September 1, 2019.

| | Pedestrians | Bicycles | Total Recreation Vehicles* | Total Visitors |
|---------|-------------|----------|----------------------------|----------------|
| Maximum | 119 | 14 | 1,716 | 5,186 |
| Minimum | 14 | 0 | 299 | 948 |
| Average | 39 | 6 | 803 | 2,447 |

| THE OF ON | 111-11-11 | The second sector | | 0.4 - 1 - | 2045 2040 |
|-----------------|-----------|-------------------|-----------------------------|-----------|-----------|
| Table 2.5: Dall | y visitor | irenas by | <pre>/ Transportation</pre> | ivioae | 2015-2019 |

*Non-recreational vehicles include BLM staff, delivery vehicles, utility and maintenance vehicles, contractors, and other nonvisitor vehicles. Recreational vehicles include all other vehicles which are assumed to be occupied by visitors.

Figure 2.7 displays visitor trends by typical form of entry for the years 2015 through 2019. Upon entry, vehicles either present their pass (week, annual, or lifetime) or pay a fee to be issued a pass. When visitors have their pass already in hand, processing time at the gate is typically expedited. While there is considerable variability each day, when averaged over all data points, the mix of passes in hand and passes issued is nearly equal (53 and 47 percent, respectively). At the highest, the percent of visitors with a pass already in hand was 67 percent, and at the lowest it was 24 percent.

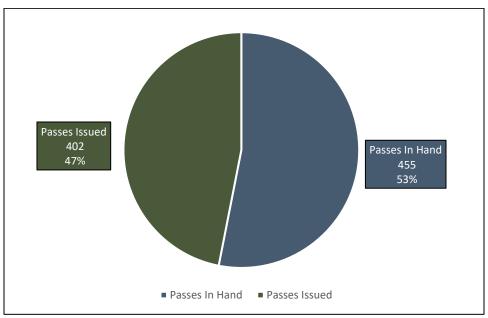

Figure 2.7: Form of Entry by Pass Type

2.3.2. Traffic Volumes and Vehicle Speeds

Traffic data were collected on site at Yaquina Head ONA using pneumatic road tubes on Friday August 13 and Saturday August 14, 2021, between the hours of 7:00 AM and 8:00 PM. The tubes were placed at multiple locations within the site to collect two-way volume and speed information. The road tubes were placed on Lighthouse Drive before and after the entrance station, on Lighthouse Drive between Quarry Cove and the Interpretive Center, on Lighthouse Drive near the Keeper's Garden, and along the access road for Quarry Cove.

These count sites were used to estimate how far vehicles travel into the site. These data do not indicate the path vehicles take within the site, only how many vehicles pass a given point. For example, a vehicle could enter the site, travel to the Lighthouse and turn around, travel to Quarry Cove, drive back to the Interpretive Center, and finally leave the site. In this scenario the vehicle would have been counted twice in each direction at the site between Quarry Cove and the Interpretive Center. As a result, the sum of the vehicles entering the site may not equal the sum of vehicles counted at the other locations within the site.

Figure 2.8 presents a map of the locations where traffic data were collected along with the resulting volume data from the Saturday counts. See **Appendix C** for more information.

OR BLM NWO 1516291(1) Task Order No. 69056721F000012

Figure 2.8: Summer Data Collection Sites and Two-Way Volumes

Lighthouse Drive Traffic Volumes

A higher volume of traffic was observed traveling on Lighthouse Drive on Saturday, which is expected given the recreational nature of Yaquina Head ONA. The entering and exiting pattern was found to be different between the 2 days, with a larger percentage of daily visitors arriving in the morning and leaving before noon on Friday. On Saturday, visitors appeared to arrive later and stay at the site longer with no defined peaks throughout the day.

The maximum number of vehicles at the site over any given 15-minute period was determined using data from the count site west of the entrance. This was calculated by cumulatively adding entering (westbound) vehicles and subtracting exiting (eastbound) vehicles. The maximum number of vehicles within the site was roughly the same on Friday and Saturday with 115 and 127 vehicles recorded, respectively. On Friday, the peak number of vehicles was reached around 11:15 AM and decreased until around 1:00 PM where the count leveled off at approximately 60 vehicles. Around 4:30 PM the number of vehicles began to decrease into the evening. On

Saturday, total vehicles reached 100 by about 10:45 AM and remained above 100 until approximately 2:30 PM. The peak number of vehicles within the site occurred at 1:00 PM. From 2:30 PM continuing into the evening, the number of vehicles within the site decreased at a steady rate. **Figure 2.9** presents the entering, exiting, and cumulative sum of vehicles within the site.

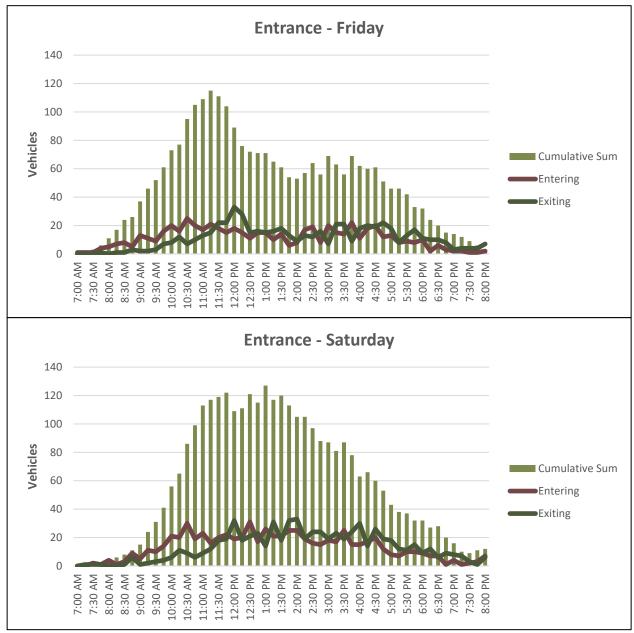

Figure 2.9: Lighthouse Drive after Entrance

Between 7:00 AM and 8:00 PM, a total of 586 and 694 vehicles entered the site on Friday and Saturday, respectively. Based on a comparison of the number of vehicles counted at the sites both before and after the entrance, it was found that approximately 15 percent of vehicles on Lighthouse Drive reached the entrance and turned around without continuing into the site.

The charts in **Figure 2.10** show the exiting, entering, and cumulative sum of vehicles on Lighthouse Drive between Quarry Cove and the Interpretive Center. The count site presents the same general trends as the entrance. On Friday, a peak occurred before noon with volumes tapering off into the evening. On Saturday, the peak occurred from about 11:00 AM until 2:15 PM with a slow decrease into the evening. The peak on both days was around 100 vehicles and was more pronounced on Friday.

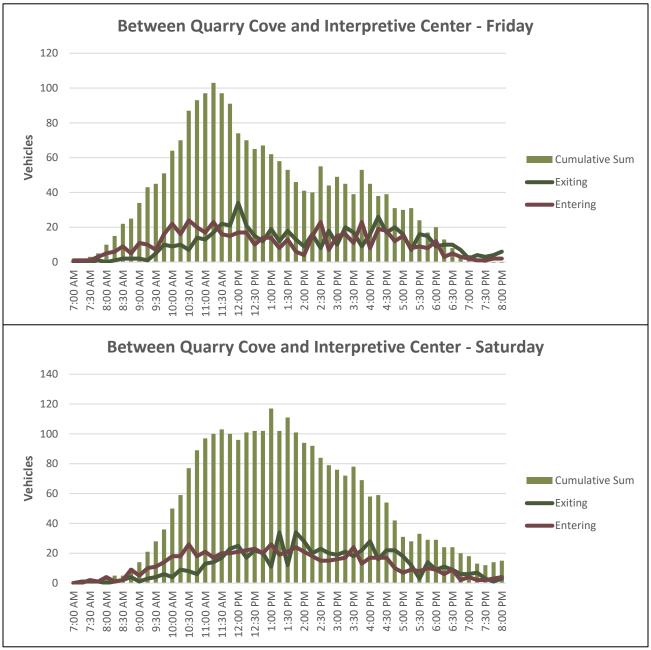

Figure 2.10: Lighthouse Drive Between Quarry Cove and the Interpretive Center

The parking lot at the end of Lighthouse Drive has 37 personal vehicle stalls, 3 large vehicle stalls, and 3 ADA accessible stalls. An additional 2 stalls are designated for official use only. Based on the traffic counts, this

parking area reached or surpassed available capacity about 10 percent of the time on Friday and about 7 percent of the time on Saturday. On Friday, the lot was at capacity (45 cumulative vehicles or more) between 10:00 AM and 11:30 AM. After this time, the number of vehicles decreased until around 2:30 PM, at which time the volume increased again to more than 30 cumulative vehicles until 5:30 PM. The peaks on Saturday exceeded 45 vehicles for only one 15-minute interval at 10:30 AM. As with Friday, the Saturday data showed 2 peaks throughout the day with a lull between noon and 3:00 PM. When the lighthouse parking lot is at or near capacity, vehicles are directed into the Interpretive Center by cones placed at the intersection. **Figure 2.11** presents charts displaying the vehicles entering, exiting, and the cumulative sum of vehicles on Lighthouse Drive beyond the Keeper's Garden.

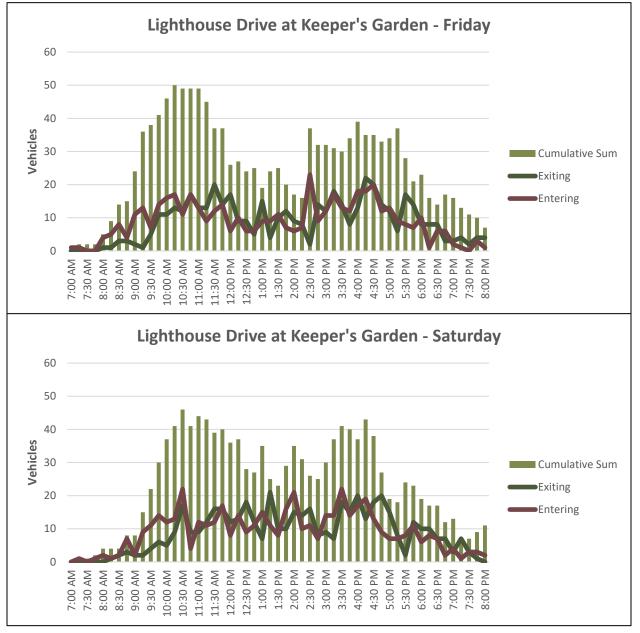

Figure 2.11: Lighthouse Drive at the Keeper's Garden

2.3.3. Quarry Cove Access Road Traffic Volumes

Beyond the Yaquina Head ONA entrance, pneumatic road tubes were placed along the access road for Quarry Cove. The Quarry Cove parking lot has approximately 55 parking stalls. Based on the volume counts on the Quarry Cove access road, this parking lot never reached capacity on the days of observation. On Friday, 2 peaks occurred at 11:30 AM and 3:00 PM with approximately 16 vehicles each. On Saturday, 1 distinct peak occurred at 11:45 AM with 25 vehicles, with 10 or more vehicles in the Quarry Cove area for the majority of the day from 11:00 AM until 5:30 PM. The low tide on these days occurred at about 11:00 AM, correlating with the visitor peak on both Friday and Saturday. The charts in **Figure 2.12** show the exiting, entering, and cumulative sum of vehicles in the Quarry Cove area.

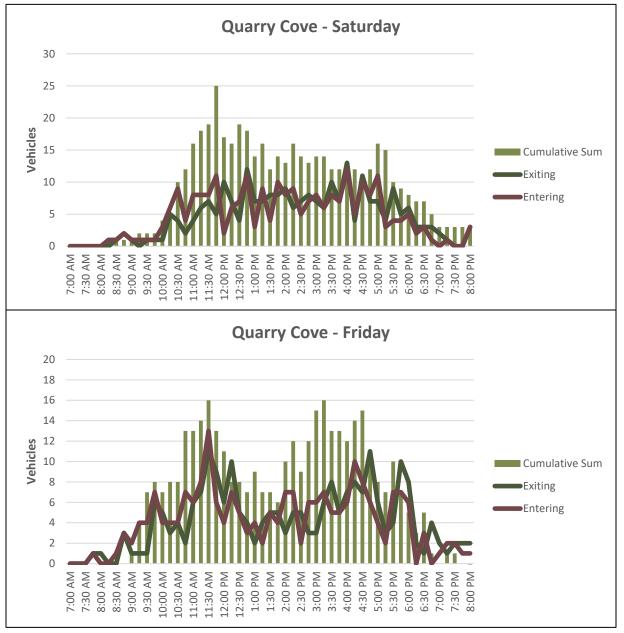

Figure 2.12: Quarry Cove Access Road

2.3.4. Vehicle Speeds

Most of the site is signed at 25mph, except the Quarry Cove access road in both directions and Lighthouse Drive in the eastbound direction only near the Keeper's Garden, which are signed at 15 mph. US 101 through the study area is signed at 45 mph. Input from BLM suggests that posted speed limits are not well respected within the Yaquina Head ONA boundaries, and vehicles often speed through the site, endangering non-motorists and motorists alike.

Along with traffic volume information, the pneumatic tube counters were used to collect speed data. From these data the average speed, 85th percentile speed, and the pace of traffic were determined. The 85th percentile speed is the speed at or below which 85 percent of vehicles are observed to travel. The pace of traffic is the 10 mph range at which the most vehicles are traveling. **Table 2.6** presents speed data in tabular form. See **Appendix C** for more information.

| Location | Direction | Posted Speed (mph) | Average Speed (mph) | 85th Percentile Speed (mph) | 10 mph Pace (% of Vehicles) |
|---|-----------|-----------------------|------------------------|--------------------------------|--------------------------------|
| Lighthouse Drive – East of | Westbound | 25 | 24.9 | 28.9 | 20.2 – 30.1 (80.5%) |
| Entrance | Eastbound | 25 | 24.5 | 28.6 | 19.9 – 29.8 (81.6%) |
| Lighthouse Drive – West of | Westbound | 25 | 16.7 | 19.3 | 11.7 – 21.6 (95.0%) |
| Entrance | Eastbound | 25 | 19.6 | 23.0 | 14.7 – 24.6 (87.9%) |
| Ouerry Coue Assess Dood | Westbound | 15 | 19.6 | 23.8 | 14.3 – 24.2 (81.1%) |
| Quarry Cove Access Road | Eastbound | 15 | 16.7 | 20.0 | 11.4 – 21.3 (90.7%) |
| Lighthouse Drive – | Westbound | 25 | 25.5 | 29.3 | 20.9 – 30.7 (84.7%) |
| Between Quarry Cove and the Interpretive Center | Eastbound | 25 | 26.5 | 30.3 | 21.4 - 31.3 (81.0%) |
| Lighthouse Drive – | Westbound | 25 | 19.9 | 24.4 | 15.1 – 25.0 (78.1%) |
| Keeper's Garden | Eastbound | 15 | 17.6 | 21.7 | 13.4 – 23.3 (79.1%) |

Table 2.6: Traffic Speed Data

Based on the data collected, the average, 85th percentile speeds, and pace of traffic were all generally below or within 5 mph of the posted 25 mph speed limits. The most common spots at which speeding vehicles were noted were within the 15 mph zones. In the westbound direction on the Quarry Cove access road, 88 percent of vehicles were observed exceeding the speed limit. Near Keeper's Garden, 20.2 percent of vehicles were observed exceeding the 15 mph speed limit. Approximately 4.3 percent of vehicles were speeding within the combined 25 mph zones, while 32.8 percent of vehicles were speeding within the combined 15 mph zones.

2.3.5. US 101 / Lighthouse Drive Traffic Data

Data collection cameras were used to collect turning movement counts (TMCs) at the intersection of US 101 and Lighthouse Drive in both the 2021 spring and summer seasons. In the spring, data were collected on Saturday May 1st through Sunday May 2nd from 5:00 AM to 9:00 PM and on Monday May 3rd from 5:00 AM to 5:00 PM. In the summer, data were collected in tandem with pneumatic tubes on Friday August 13th from 5:00 AM to 9:00 PM and Saturday August 14th from 5:00 AM to 8:30 PM.

An operational analysis was performed for the US 101 and Lighthouse Drive intersection using the collected traffic data. Field collected data, as discussed previously, were used as inputs for the analysis. Data were

F D D E

E D E F

evaluated for 2 timeframes: AM (7:00 AM - 11:00 AM) and PM (3:00 PM - 7:00 PM). The peak hour of traffic during each timeframe was calculated for the intersection.

Intersection performance is evaluated in terms of vehicle delay. The amount of vehicle delay experienced at an intersection correlates to a measure called level of service (LOS). LOS is used as a means for identifying intersections that are experiencing operational difficulties. The LOS scale (A through F) represents the full range of operating conditions. The scale is based on the ability of an intersection to accommodate the amount of traffic using the intersection. The scale ranges from "A" which indicates little, if any, vehicle delay, to "F" which indicates significant vehicle delay and traffic congestion. The Transportation Research Board's Highway Capacity Manual (HCM) is the most widely used reference in determining the performance of existing roads and intersections and for providing input into estimating future performance.²² HCM methods were used to calculate the delay and LOS for the US 101 / Lighthouse Drive intersection, as shown in **Table 2.7**.

| | | SPRING | | | | | SUMMER | | | |
|---------------------------|-----------|--------|-----------|-----|-----------|-----|-----------|----|--|--|
| | AM | | PM | | AM | | PM | | | |

 Table 2.7: Existing Intersection Operational Analysis

The intersection typically operated at LOS C during the spring except during the Saturday PM peak hour which yielded LOS D. During the spring season, the longest delays were experienced by the minor street (westbound and eastbound) approaches, with delays ranging from 39 to 47 seconds on the eastbound leg and 59 to 70

seconds on the westbound leg. The east and westbound approach signals are not configured with protected left turn arrows. This likely is a contributing factor to the longer delays at these approaches.

In the summer, the intersection experienced reduced levels of service and increased delays on all legs. The westbound leg experienced the longest delays, with delays ranging from 63 seconds to 119 seconds. The southbound leg experienced a significant delay of 98 seconds during Friday AM peak hour as compared to 48 seconds during the Friday PM peak hour. Newport has historically been and continues to be a popular tourist stopping point given its location on the Oregon Coast Highway. Given this, it is reasonable to assume that delays at the intersection increase during the summer as a result of an increase in tourist activity.

The northbound left-turn bay on US 101 is approximately 160 feet long with an additional 400 feet of two-way left-turn lane that could be used to accommodate additional queued vehicles. During both spring and summer data collection periods, all queued traffic cleared the intersection in 1 cycle. The maximum observed queue was 8 vehicles. Although the signal timing allows all vehicles to clear the intersection, the signal phasing only allows protected left turns which increases delay by prohibiting unprotected left turns. Still, the northbound leg is shown to exhibit lower vehicle delays compared to the east and westbound legs.

2.4. Projected Traffic Conditions

The Newport TSP forecasted future (2040) traffic conditions using the latest (2018) Newport Travel Demand Model developed and maintained by ODOT. The model predicted future traffic volumes based on an assumed 21 percent overall increase in households and 20 percent increase in the number of jobs in Newport. A significant portion of those households and jobs are predicted to occur in developments in the land surrounding the US 101/Lighthouse Drive/NE 52nd Street intersection.

Overall, the TSP forecasts the average daily traffic on US 101 in downtown Newport to increase nearly 30% during typical weekday traffic conditions and nearly 25% during peak summer traffic conditions. In particular, at the US 101/Lighthouse Drive/NE 52nd Street intersection, traffic is forecast to increase at an average rate of 1.7 percent per year under peak summer conditions and 1.3 percent per year under average weekday conditions. Traffic on the minor streets is expected to increase at a higher rate than the US 101 legs of the intersection due to predicted traffic patterns.

2.4.1. Projected Traffic Volumes

Existing intersection TMCs were used to predict future traffic volumes on Lighthouse Drive for the design year 2042 based on the projected growth rates provided in the TSP. Since 24-hour TMCs were not collected at the intersection, a design hourly volume (DHV) adjustment was applied to estimate average daily traffic (ADT). The DHV was determined based on a nearby ODOT continuous count site located on US 101 at MP 139.11. The 2020 DHV at this site was 11.8%. **Table 2.8** displays the projected ADT counts.

| Location | 2021 Adjust | ed ADT* | 2042 Projected ADT | | |
|------------------|-------------|---------|--------------------|--------|--|
| Lighthouse Drive | Spring | Summer | Spring | Summer | |
| | 1,847 | 2,271 | 2,423 | 3,236 | |

Table 2.8: Projected Traffic Volumes – Lighthouse Drive

*ADT = DHV * Highest Peak Hour Volume

If traffic grows in the manner predicted by the TSP, Lighthouse Drive could experience traffic volumes greater than 3,000 during the peak summer season within the next 20 years. During the spring season, upwards of 2,500 vehicles could be observed on Lighthouse Drive by 2042.

2.4.2. Projected Intersection Operations

Existing intersection TMCs were projected to predict future traffic conditions for the design year of 2042. The analysis assumes that the traffic mix and patterns observed under existing conditions will remain the same into the future while growing at the rates discussed in the previous section. The results of the analysis are presented in **Table 2.9**.

| | | SPRING | | | SUMMER | | | |
|---------------------------|-----------|--------|-----------|-----|-----------|-----|-----------|-----|
| | AM | | PM | | AM | | PM | |
| Intersection | Delay (s) | LOS | Delay (s) | LOS | Delay (s) | LOS | Delay (s) | LOS |

| Southbound (US 101) | 37.8 | D | 29.4 | С | - | - | - | - |
| Eastbound (Lighthouse Dr) | 40.6 | D | 41.9 | D | - | - | - | - |
| Westbound (Lighthouse Dr) | 75.1 | E | 78.1 | E | - | - | - | - |

Table 2.9: Projected Intersection Operational Analysis

When compared to existing conditions, peak-hour operations are projected to degrade. The projected conditions analysis shows failing traffic conditions during all peak hours in both the summer and spring seasons. Delays are projected to increase significantly compared to the existing conditions. The traffic conditions on Friday and Saturday yield the greatest delays, especially during the PM peak hour. In particular, summer traffic conditions are projected to experience the highest delays. During the AM peak hour, the southbound leg shows the greatest delay of nearly 300 seconds. During the PM peak hour, the northbound leg shows the greatest delay of 269 seconds.

Tourism activity is expected to increase at Yaquina Head ONA in future years. An increase in visitors will result in an increase in traffic at the US 101/Lighthouse Drive intersection. Given this assumption, it is reasonable to conclude that the current intersection configuration will not adequately accommodate future traffic volumes.

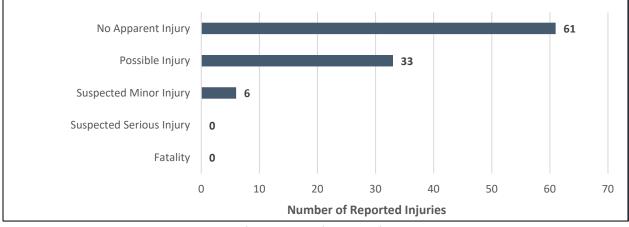

2.5. Safety

ODOT provided data for crashes occurring on US 101 between MP 137 and 138 over the 10-year period between January 1, 2009, through December 31, 2018. The crash data included location, time period, type, severity, environmental factors, driver demographics, and vehicle details associated with each crash. A total of 65 crashes were reported on the 1-mile-long stretch of the highway during this time period. Of the 65 crashes, 36 are reported as occurring at the US 101/Lighthouse Drive/NE 52nd St intersection based on the reports prepared by the responding officers.

The crash data obtained from ODOT were compiled from individual driver and police crash reports submitted to ODOT. As such, some of the information contained in the crash reports may be subjective or inaccurate. Any crash records that were not reported to ODOT are not contained in the database and are not included in this analysis. The following sections summarize only the 36 crashes occurring at the study intersection as reported by ODOT.

2.5.1. Severity

The determination of injury severity for a person involved in a crash is based on the latest information available at the time the crash report is completed. From least to most severe, injury severity categories include no apparent injury, possible injury, suspected minor injury, suspected serious injury, and fatal injury. The distribution of reported injury severity resulting from crashes occurring at the intersection is presented in **Figure 2.13**.

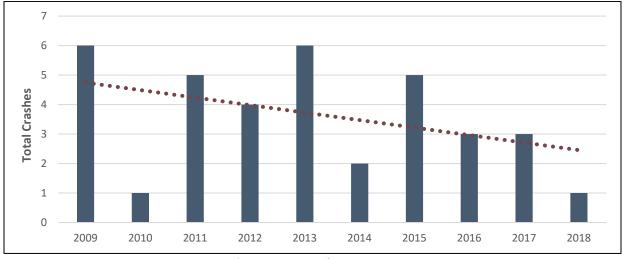

Of the 100 people involved in the 36 crashes at the intersection, 39 individuals experienced injuries, including 6 suspected minor injuries and 33 possible injuries. No fatalities or suspected serious injuries were reported at the intersection, and 61 individuals experienced no apparent injury.

2.5.2. Crash Period

Crash data for the study area was evaluated based on the time period when the crash occurred. Temporal trends such as crashes per year, month, day of week, and hour of the day were identified. **Figure 2.14** shows

the frequency of crashes occurring per year over the 10-year analysis period. During this time, the number of crashes per year fluctuated but generally trended downward. ODOT noted that a higher number of crashes may be reported as of 2011 compared to prior years due to an internal department reporting process to add previously unavailable, non-fatal crash reports to the data file.

The frequency of crashes occurring during each month and day of the week were plotted in **Figure 2.15**. The highest number of crashes were observed during the summer months, June through September (17 crashes), which may reflect higher traffic volumes associated with summer tourism. Crashes peaked on Mondays (7 crashes) and Saturdays (8 crashes), with the fewest crashes occurring on Thursdays (3 crashes).

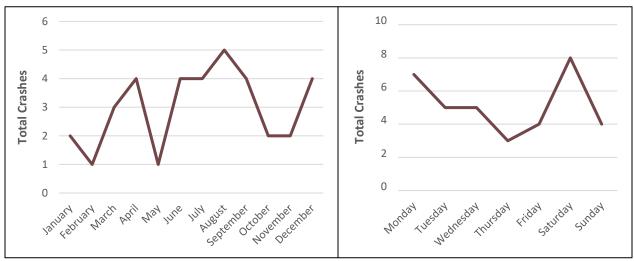

Figure 2.15: Crashes by Month and Day of Week

2.5.3. Crash Type

Crash types can be grouped into 2 categories: multiple and single vehicle crashes. During the 10-year analysis period, no single vehicle crashes occurred at the intersection. Multiple vehicle crashes involving 2 vehicles accounted for nearly 70 percent of all crashes while crashes involving 3 or 4 vehicles accounted for 25 and 6

percent of crashes, respectively. The most common crash types were rear end (31 crashes) followed by crashes related to turning movements (4 crashes). The remaining crash was related to improper backing. **Figure 2.16** presents the distribution of crash types at the intersection.

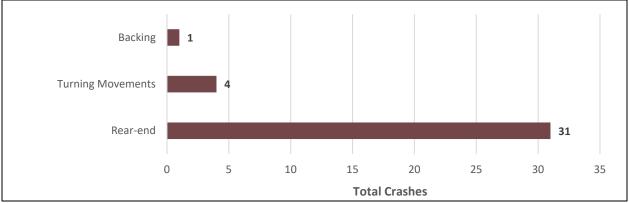

Figure 2.16: Crash Type

2.5.4. Environmental Factors

Crash records include information relating to environmental factors such as roadway surface, weather, and lighting conditions. This information was analyzed to identify trends. The road condition was reported as dry for 61 crashes. Snow, ice, or frost covered roadways were reported for 21 crashes and wet roadways were reported for 15 crashes. Daylight conditions were reported for 77 crashes and dark-lighted conditions were reported for 12 crashes. With respect to weather conditions, clear weather was reported for 60 crashes, cloudy conditions were reported for 22 crashes, and snow was reported for 12 crashes. **Figure 2.17** presents the distribution of environmental factors. **Table 2.10** details the relationship between weather, road, and lighting factors.

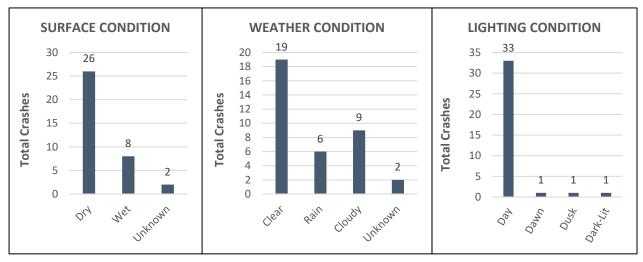

Figure 2.17: Environmental Factors

| Weather | | | | | |
|---------|-----|------|------|------|-------|
| Surface | Day | Dark | Dawn | Dusk | Total |
| Clear | 18 | | | 1 | 19 |
| Dry | 14 | | | 1 | 15 |
| Wet | 4 | | | | 4 |
| Unknown | | | | | |
| Rain | 5 | | 1 | | 6 |
| Dry | 4 | | | | 4 |
| Wet | 1 | | 1 | | 2 |

| Unknown | 1 | | | | 1 |
| Unknown | 1 | 1 | | | 2 |
| Dry | | | | | |
| Wet | | 1 | | | 1 |
| Unknown | 1 | | | | 1 |
| Total | 33 | 1 | 1 | 1 | 36 |

Table 2.10: Environmental Factors in Crashes

2.5.5. Driver Demographics

Driver gender and age were analyzed to identify potential trends. A total of 84 drivers were involved in the 36 reported crashes, reflecting more than 1 driver involved in multiple-vehicle crashes. Males accounted for 43 of the drivers (51 percent), while females accounted for 31 of the drivers (37 percent). The gender of the remaining 10 drivers was reported as unknown. Since 2016, age and gender are not reported by ODOT for crashes resulting in property damage only. About 63 percent of the drivers involved in crashes resulting in injuries were female.

Female drivers outnumbered male drivers in the 26-35 age category, but male drivers outnumbered or equaled female drivers in the remaining age categories. The average age of drivers was 37.3 years. The youngest and oldest drivers were reported as 17 and 72 years, respectively. Individuals 25 years old and younger accounted for 11 drivers (13 percent), while individuals 66 years old and older accounted for 5 drivers (6 percent). The age distribution and gender of drivers involved in reported crashes is shown in **Figure 2.18**.

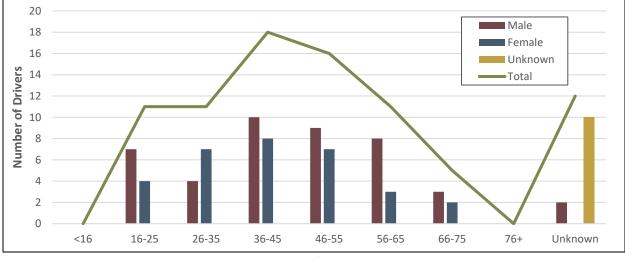

Figure 2.18: Driver's Age and Gender

2.5.6. Vehicle Details

A total of 84 vehicles were involved in the 36 reported crashes. All vehicles were either categorized as "passenger car, pickup, or light delivery vehicle" (72 vehicles) or were reported as unknown (12 vehicles). Similar to driver demographics, since 2016 ODOT has stopped reporting select vehicle details when the crash causes property damage only. No large trucks or motorcycles were reported in crashes at this intersection over the 10-year analysis period. Likewise, no bicyclists or pedestrians were reported to be directly involved in the crashes. However, 1 bicyclist and 1 pedestrian were reported as being indirectly involved in 2 separate rear-end crashes.

2.5.7. Contributing Factors

For each crash, reporting indicated the cause of the crash, which represents the circumstance(s) most responsible for the occurrence of the crash. Each crash must have at least 1 cause entered, but up to 3 are allowed. The causes are reported in order of relevance to the crash. The reported cause of the crashes is presented in **Figure 2.19**. The most common cause was following too closely (21 occurrences), which is common in rear-end crash types. Inattention and driving too fast for conditions (but not exceeding the speed limit) were the next most common, occurring 7 and 6 times, respectively. In the 4 crashes reported as turning movement crash types, the primary causes were disregarding the traffic signal (2 crashes), making an improper turn (1 crash), and careless driving (1 crash).

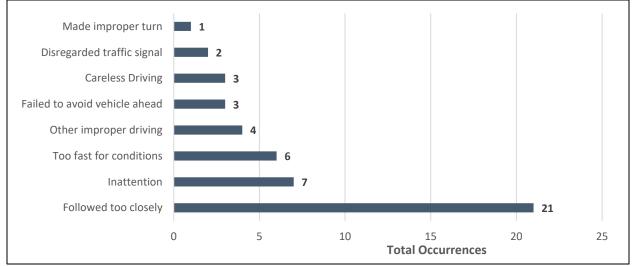

Figure 2.19: Reported Causes of Crashes

ODOT reports alcohol involvement in the crash when an active participant (driver or non-motorist in a position of control during the crash) has been using alcohol. This is determined based on reported use by the participant or officer as well as participant blood alcohol content results. Alcohol was determined to be involved in 1 of the 36 crashes at the intersection over the 10-year analysis period.

ODOT also reported whether a vehicle was exceeding the posted speed based on information from the police report, issued citations, or by the driver's own admission. Of the 36 reported crashes, 6 were determined to involve vehicles exceeding the speed limit. Since 2016, speed data is no longer collected when the crash results in property damage only. Based on crash date and injury severity, up to 3 additional property damage only crashes may have involved high speeds.

2.5.8. Wildlife Incidents

ODOT maintains data for wildlife incidents on Oregon Highways on its TransGIS²³ interactive mapping tool. At the time of viewing, 5 wildlife incidents were reported at the US 101/Lighthouse Drive intersection. All 5 incidents involved deer. Each of the incidents occurred in separate years: 2014, 2016, 2018, 2019, and 2020. One of the incidents occurred in the spring, 2 in the summer, and 2 occurred in autumn.

2.5.9. Additional Safety Concerns

ODOT also provides publicly available crash data on its TransGIS interactive mapping tool. Crash data for the years 2015 through 2019 were available at the time of viewing. Based on available data, 2 crashes were reported on Lighthouse Drive over the 5-year period.

The first crash occurred in August of 2016 at Lighthouse Circle and was reported as a backing crash type. The second crash occurred in June of 2017 and was reported as a rear-end crash. Both crashes were reported as property damage only crashes and occurred on dry roads under daylight conditions.

The BLM also records safety incidents that occur on site at Yaquina Head ONA. No transportation-related incidents were shared for reporting in this memorandum.

BLM staff have noted additional safety concerns relating to potential conflicts between vehicles and pedestrians due to a lack of dedicated pedestrian facilities. Concern has been voiced regarding the section of

Lighthouse Drive between the US 101 intersection and the entrance station. Pedestrians often walk into the site on foot along the roadway shoulder and sometimes in the travel lanes, increasing the potential for vehicle-pedestrian conflicts. Several areas within the site also lack pedestrian facilities or provide poor visibility. At the entrance station, conflicts have been observed between pedestrians and opposing traffic as well as vehicles performing unsafe turnaround maneuvers. Additionally, staff safety has been noted as a potential concern, particularly when staff are conducting line busting activities in live traffic.

3.0. ECONOMIC AND RECREATIONAL CHARACTERISTICS AND OPPORTUNITIES

The following sections describe the current and future economic and recreational characteristics and opportunities at the city, county, and statewide levels.

3.1.1. Economic Characteristics

Median household incomes in Newport and Lincoln County are both below the state median values. The median income in Newport is approximately 22 percent lower than that of the statewide median, while that in Lincoln County is 24 percent lower than the statewide median. The poverty rates in Newport and Lincoln County are both above that of the overall poverty rate in Oregon. The statewide unemployment rate is also less than that of the city and county rates.

| Table 5.1. Economic Characteristics Near the Study Area | | | | | |
|---|-----------------------------|----------|----------------|-----------|--|
| | | Newport | Lincoln County | Oregon | |
| Population | | 10,559 | 48,547 | 4,129,803 | |
| Economic Characteristics | Median household income | \$49,039 | \$47,882 | \$62,818 | |
| | Persons below poverty level | 17.0% | 16.3% | 13.2% | |
| | Unemployment rate | 5.7% | 6.1% | 5.5% | |

| Table 3.1: Economic | Characteristics | Near the | Study Area |
|---------------------|------------------------|----------|------------|
| | characteristics | neur uic | Study Alca |

Source: U.S. Census Bureau American Community Survey, 5-Year Estimates (2015 – 2019)

In 2019, the City of Newport employed approximately 4,467 people. The largest employing industry in the city was accommodation and food services (18 percent). Retail trade employed 13 percent and health care and social assistance employed 11 percent of the population in Newport. The highest paying industries were utilities (\$103,750), professional, scientific, and technical services (\$53,750), and public administration (\$52,708).

Historically, the tourism industry has thrived in Newport. Newport boasts a plentitude of tourist attractions including museums and city parks. Recreational opportunities are also in abundance including fishing, boating, biking, and various other activities. The national and state parks and historical sites in the area also continue to attract tourists.

3.1.2. Site Fees

Yaquina Head honors and issues all America the Beautiful National Parks and Federal Recreational Lands passes as well as Oregon Pacific Coast passes. The fee structure is listed in **Table 3.2**. Visitation is projected to increase within the upcoming years. As visitation increases, the potential for future revenue generation also increases.

Table 3.2: Yaquina Head ONA Fee Structure

| Pass Type | Time Valid | Cost | Notes | |
|-----------------------------------|------------|------|---|--|
| Private Vehicles & Buses | | | | |
| Passenger Vehicle, Non-Commercial | 3 days | \$7 | – Valid at Yaquina Head ONA only | |
| Motorcycle | 3 days | \$3 | | |
| Commercial Bus (<20) | 1 day | \$25 | | |
| Commercial Bus (>20) | 1 day | \$50 | | |
| Oregon Pacific Coast Passport | | | | |
| Non-Commercial | 5 days | \$10 | Provides access to Oregon State Park, US Forest | |
| Non-Commercial (Annual) | 1 year | \$35 | Service (USFS), National Park Service (NPS) and BLM sites along the Oregon Coast. | |
| Annual Passes | 1 | | | |
| Yaquina Head | 1 year | \$15 | Valid at Yaquina Head ONA only | |
| Interagency | 1 year | \$80 | Covers NPS, BLM, USFS, USFWS, Bureau of Reclamation (BOR), Army Corps of Engineers (USACE) – anyone can purchase. | |
| Interagency (Senior) | 1 year | \$20 | Covers NPS, BLM, USFS, USFWS, BOR, USACE - US Citizens age 62+ only | |
| Lifetime Passes | | | | |
| Interagency Access | Lifetime | Free | US Citizens with a permanent disability only | |
| Interagency Senior | Lifetime | \$80 | US Citizens age 62+ only | |
| Free Entry | | | | |
| Pedestrians | | | | |
| Bicyclists | 1 day | Free | Valid at Yaquina Head ONA only | |
| Registered Educational Groups | | | | |

Lighthouse Tours

Tours of the Yaquina Head Lighthouse are offered when weather and staffing conditions permit. Each tour is limited to 16 visitors. Day-of-tour passes are available on a first-come, first-serve basis and must be reserved in person at the Interpretive Center no earlier than 10 AM on the day of the tour. A \$1 administration fee is required to hold each ticket reservation.

3.1.3. Future Economic Opportunities

The *Greater Newport Area Vision and Strategic Plan* outlines various strategies for developing new economic opportunities in the Newport area. The recommended strategies, outlined below, focus on creating new businesses and jobs in the community. Robust interpretive programming and visitation at the Yaquina Head ONA support strategies relating to tourism diversification and science economy expansion.

- **Expanded Working Waterfront** Expand the capacity of existing marine businesses through utilization of marine-related assets
- Science Economy Expansion Expand the science and marine economy in Newport through national and international promotion methods highlighting the Newport area as a hub for scientific research, education, observation, and conservation activities.
- Living-Wage Jobs Create and retain jobs that provide at the least a minimum income that allows employees to meet basic life needs

- Airport Improvements Maintain and enhance the Newport Municipal Airport as a viable transportation asset that can support business growth and improve access to and from the community
- Marine Economy and Economic Development Consider Oregon State University's Marine Studies Initiative in tangent with the area's marine economy in future economic development planning
- **Tourism Diversification** Promote expansion of ecotourism and interpretive programs based on Newport's marine industries
- Arts and Cultural Destination Promote the Newport area as a major arts and cultural destination
- Local Businesses Support Support and retain existing local businesses
- Small Business Development Expand training and education for small business development and skills. Include resources for artists, craftspeople, tradesmen, and technology start-ups.
- Green and Sustainable Business Promote and support businesses that use sustainable technologies, materials, and products.
- **Sustainable Fisheries** Support sustainable fisheries by utilizing new technologies and partnering with the science community.
- **Diversified Agricultural Economy** Promote the production, marketing, and sales of seafood, wood products, and local agricultural goods.
- Shoulder Season Attractions and Festivals Develop new attractions to sustain tourism throughout the shoulder season
- Viable and Sustainable Commercial Air Service Partner with local, state, and federal officials to develop a model for sustainable air service
- **Permanent Farmers Market** Implement a year-round farmers market with expanded hours. Provide expanded opportunities for food, beverage, and agricultural goods start-ups.

3.1.4. Existing Recreational Opportunities

Yaquina Head ONA provides multiple recreation opportunities including seal, sea bird, and wildlife viewing; whale watching; tide pooling; and numerous walking and biking opportunities. The offshore islands are a year-round refuge for harbor seals and a spring-summer home for thousands of nesting seabirds. Gray whales can be spotted during their annual migrations to Mexico (during late fall-early winter) and Alaska (during late winter-early spring). During the summer months some gray whales feed in the shallow waters around the headland. Cobble Beach, named for the smooth, dark, rounded basalt stones that cover the beach, offers some of the best tidepool exploration in the area. When the tide is low, a vibrant ocean floor is revealed with pools of colorful animals including orange sea stars, purple sea urchins, and giant green anemones. For a brief time, Quarry Cove provided access to the nation's only wheelchair-accessible tidepools. However, the ocean continually deposited sand in the pools, so the BLM decided to instead maintain Quarry Cove as an ADA-accessible beach.

Many local residents regularly walk their dogs at the site. Leashed dogs are allowed on all trails and beaches but are not allowed inside the Interpretive Center or lighthouse. Walking, hiking, and biking are popular for both locals and out-of-area visitors to enjoy sunning views of the Oregon coast.

Other users visit Yaquina Head ONA to surf or hang/paraglide. Communications Hill Trail provides access to 2 hang/paragliding launch sites. Pilots are instructed to check in with ONA staff prior to flying as there is at least 1 closure or restriction in force at all times. There are also several good viewpoints to watch these recreationists.

Guests are encouraged to visit the Interpretive Center to view exhibits, presentations, and videos on seabirds and marine life as well as human history on the headland. The center also features the wheelhouse of an historic ship, a recreated rocky island and its inhabitants, and a full-scale replica of the lighthouse lantern. For many years, peregrine falcons have built nests on the cliffs above the Interpretive Center. Visitors often congregate in the Interpretive Center parking lot to watch the falcons, and 24-hour livestream cameras were recently installed to allow distant visitors to watch the birds.

BLM staff and volunteers are available for visitors to ask questions. When weather and staffing conditions permit, ranger-led lighthouse tours are also offered.

3.1.5. Future Recreational Opportunities

The *Newport Transportation System Plan* (TSP) outlines several locations in Newport that are in critical need of improvements to pedestrian facilities (See **Section 1.6** for detail). Identified locations include the Yaquina Bay area, the Oregon Coast Trail (near Yaquina Head), and crossings on US 101. There is a need to address existing gaps in pedestrian facilities, poor connections, vehicle speeds, and safety issues. The intent is to complete the pedestrian system, making walking a more attractive option in the area.

Coordination with the city of Newport to provide new trails or connections between existing trails would further facilitate recreational opportunities in the area. Connectivity between Yaquina Head ONA and Yaquina Bay would fill a gap in the existing Oregon Coast Trail. As it exists, the trail terminates at the beach just north of Yaquina Head ONA and begins again on Agate Beach. Coordination with the Oregon Coast Trail would facilitate better access through Yaquina Head ONA while simultaneously helping to complete the pedestrian system in Newport.

4.0. ENVIRONMENTAL SETTING

As with any potential roadway improvement project, the current and potential environmental conditions need to be considered. This section provides a planning-level overview of environmental resources and identifies potential constraints and opportunities based on readily available environmental information. Improvement projects forwarded from this planning study which may impact the species supported by the environment, the land surrounding the roadway, and the nearby populations will need to be considered. Project-level environmental analysis would be required for any improvements forwarded from this study. Information contained in this section may be used to support future environmental documentation.

4.1. Physical Environment

The following subsections present an overview of items related to the physical environment of the study area.

4.1.1. Land Ownership and Land Use

Yaquina Head ONA is located within the city limits of Newport. Allowed land uses in and around Yaquina Head ONA are regulated by the City of Newport's *Comprehensive Plan* through its zoning maps and code. According to the City's 2016 zoning map, Yaquina Head ONA is zoned as public structures and all land immediately adjacent to the site is zoned as medium density single-family (R-2). The land surrounding the US 101/Lighthouse Drive/NE 52nd Street intersection is zoned as light industrial (I-1) with some bordering lands zoned as tourist commercial (C-2). Future/planned land uses surrounding Yaquina Head ONA, as shown in the city's Comprehensive Plan Map, include low density residential, as well as higher density residential and commercial uses closer to the US 101 intersection.

Lands surrounding Yaquina Head ONA are mostly privately held, although some bordering lands are owned by the City of Newport and Lincoln County. BLM owns the nearly 100 acres of Yaquina Head ONA including all roads. The right-of-way for Lighthouse Drive and US 101 is held in public interests. The City of Newport is responsible for Lighthouse Drive from the US 101 intersection extending about 850 feet west and ODOT is responsible for US 101. The small parking lot adjacent to Lighthouse Drive near the US 101 intersection is mostly within private right-of-way while the Ernest Bloch Memorial Wayside parking lot along US 101 south of Lighthouse Drive is within the US 101 right-of-way.

4.1.2. Soil Resources and Prime Farmland

The *Farmland Policy Protection Act* (FPPA) (7 U.S.C. 4201 et. seq.) requires deliberate analysis for potential farmland impacts of projects with federal involvement. The FPPA defines the term farmland only as prime farmland, unique farmland, and farmland of statewide or local importance. Farmland subject to FPPA requirements does not have to be currently used for cropland. The FPPA does not apply to lands already in or committed to urban development but does stipulate that federal programs be compatible with state, local and private efforts to protect farmland

The US Department of Agriculture Natural Resources Conservation Service (NRCS) determines where prime farmland exists and maintains mapping resources and information to support the FPPA. Prime farmland soils are those that have the best combination of physical and chemical characteristics for producing food, feed, and forage; the area must also be available for these uses. Prime farmland can be either non-irrigated or lands that would be considered prime if irrigated. Farmland of statewide importance is land, in addition to prime and unique farmlands, that is of statewide importance for the production of food, feed, fiber, forage, and oilseed crops.

The study area has been mapped by the NRCS and is included in the Lincoln County Area survey area. The map shows that no prime farmland exists within the Lincoln County Area. About 11 percent of the lands are classified as farmland of statewide importance.

Federally funded projects apply the FPPA requirements to determine if prime farmland may be irreversibly converted to nonagricultural use. If any improvement options are forwarded from the traffic study to become federally funded projects, coordination with the NRCS will be required to determine the necessary NRCS processing requirements. Projects planned and completed without the assistance of a federal agency are not subject to the FPPA.

4.1.3. Geologic Hazards

The study area lies within the Siletz-Yaquina Watershed and is primarily composed of Quaternary sediments and Miocene volcanic and marine sedimentary rocks.²⁴ Coastal erosion and landslides are extensive from Otter Rock southward to Yaquina Head. There are also large landslides on both the north and south sides of Yaquina Head. According to the Oregon Department of Geology and Mineral Industries, the majority of Yaquina Head ONA is considered to be at moderate to high risk for landslide occurrence.

Seismic hazards are considered 1 of the major natural hazards in Oregon. The strongest earthquake effects are generally felt closer to the coastline. According to the *Oregon HazVu: Statewide Geohazards Viewer*, Yaquina Head ONA is located in a region that is expected to experience very strong to severe shaking in the instance of an earthquake.

The Cascadia Subduction Zone is a fault that runs from northern California to British Columbia. It lies approximately 70 to 100 miles off the Pacific Coast shoreline and has the potential to cause a 9.0+ magnitude earthquake in Oregon and a resulting tsunami of 100 feet in height. If an earthquake of this magnitude were to occur, it is anticipated that most of Oregon would be without services for 2 weeks or more. Scientists currently predict that the probability of a 7.1+ magnitude earthquake occurring within the next 50 years is about 37 percent. Yaquina Head ONA lies in a region that is expected to experience severe to violent shaking from a Cascadia earthquake.²⁵

Tsunamis are also considered a hazard for this area. The main hazard exists on the coastline, and Yaquina Head ONA is considered to be outside of the inundation hazard area. Additional tsunami hazard information is contained in **Appendix D**.

Coastal erosion is an additional geologic hazard that could potentially affect the study area due to the high activity of ocean waves. The shorelines surrounding Yaquina Head ONA are mostly within a very high hazard zone. ²⁶

4.1.4. Surface Waters

The study area lies entirely within the Siletz-Yaquina Watershed (Hydrologic Unit Code 17100204) as delineated by the United States Geological Survey (USGS). More specifically, it falls within the Moolack Creek watershed (171002040903). As discussed previously in **Section 2.1.5**, there are no prominent surface water features that cross or run parallel to Lighthouse Drive. Three unnamed, intermittent streams cross Lighthouse drive and only hold water during wet portions of the year. Two perennial streams, Little Schooner Creek and an unnamed stream, cross US 101 within the study area.

Road construction and reconstruction activities may have potential impacts to surface waters. Coordination with federal, state, and local agencies would be necessary to determine the appropriate permits based on the improvement options forwarded from this study. Impacts should be avoided and minimized to the maximum extent practicable. Impacts to streams and wetlands may trigger compensatory mitigation requirements.

Water Quality

The *Clean Water Act* (CWA) is the principal federal legislation directed at protecting water quality. The Oregon Department of Environmental Quality (ODEQ) is the state agency responsible for implementing components of the CWA. As directed by the CWA, ODEQ prepares a report every 2 years listing the status of water quality for waterbodies under state jurisdiction and showing which waters in Oregon don't meet standards. ODEQ also examines its standards every 3 years to ensure that they incorporate the most relevant scientific data.

The ODEQ biennial Integrated Reports include a list of all surface waters where pollutants have impaired the beneficial uses of water (such as for drinking, recreation, and aquatic habitats). The CWA requires the development and implementation of cleanup plans for waterbodies that fail to meet state water quality standards. This typically involves the development of a Total Maximum Daily Load (TMDL) in which ODEQ determines the sources of pollutants and sets the maximum amount of pollutants that each source can discharge to a waterbody.

According to ODEQ's 2018/2020 Integrated Report, the Moolack Creek Watershed is rated as impaired for aquatic life. The impairment categories were identified as low oxygen levels in the water and impaired biota, meaning that the biological community within the water body is unhealthy or the population numbers are significantly lower than expected. Nye Beach is rated as impaired for recreation purposes and fish and shellfish consumption. Beverly Beach, Moolack Beach, and Yaquina Head are all rated as impaired for fish and shellfish consumption as well. Big Creek is rated as impaired for aquatic life and recreation.

4.1.5. Groundwater

Groundwater is the water present beneath Earth's surface in soil pore spaces and in the fractures of rock formations. In Oregon, groundwater is an important source of drinking water for individual homes and public water systems. Groundwater is also important for irrigation and livestock. According to the Oregon Water Resources Department Well Report Mapping Tool²⁷, there are 6 wells within the Yaquina Head ONA, 5 of which are used to collect water. An additional 39 wells are located adjacent to US 101 within the broader study area. All of these wells are used for monitoring and geotechnical purposes. Well depths vary by individual location throughout the entire study area, but the reported depths of wells drilled in Yaquina Head ONA have been drilled to depths of greater than 100 feet. The reported static water levels range from 35 to 46 feet below the ground surface. Impacts to the groundwater supply should be considered in any improvement option that may be brought forward from the traffic study.

4.1.6. Floodplains and Floodways

Floodplains are the flat or nearly flat land adjacent to a stream or river that experiences occasional or periodic flooding. The floodplain includes the "floodway" which consists of the stream channel and adjacent areas that carry flood flows and the "flood fringe" including the area covered by the flood.

Executive Order (EO) 11988, *Floodplain Management*, requires efforts be taken to reduce the risk of flood loss; minimize the impacts of floods on human safety, health, and welfare; and restore and preserve the natural and beneficial values served by floodplains, including providing habitat for fish, wildlife, plants, open space, natural

flood moderation, water quality maintenance, and groundwater recharge. EO 11988 requires projects undertaken or funded by federal agencies to avoid, to the extent possible, the long and short-term adverse impacts associated with the occupancy and modification of floodplains and to avoid direct and indirect support of floodplain development wherever there is a practicable alternative.

Compliance with this directive requires an evaluation of a proposed project and its alternatives to determine the effects of any encroachments on the "base" floodplain, which is the area covered by water from the 100year flood and is a regulatory standard used by federal agencies and states to administer floodplain management programs. The 100-year flood represents a flood event that has a 1 percent chance of being equaled or exceeded in any given year.

Floodplain mapping for the study area can be found in Flood Insurance Rate Map (FIRM) panels 41041C0362E and 41041C0366E, provided in **Appendix D**. Based on this mapping, the entirety of Lighthouse Drive runs adjacent to the coastal floodplain, but the roadway itself lies outside of the floodplain boundary. A small area on the end of Quarry Cove Road lies within the coastal floodplain boundary. FEMA categorizes the headland and inland portion of the study area as Zone X, meaning this is an area of minimal flood hazard. The Pacific Ocean along Quarry Cove and Cobble Beach is subject to flooding by the 1-percent-annual-chance flood event due to high velocity waves that are typically present during storms (Zone VE).

4.1.7. Wetlands and Waters of the U.S.

Wetlands are lands that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. The repeated or prolonged presence of water at or near the soil surface is the dominant factor determining the nature of soil development and the types of plant and animal communities living in the soil and on its surface. Wetlands can typically be identified by the existence of 3 environmental parameters: a dominance of hydrophytic vegetation, hydric soils, and prolonged periods of inundation or saturation resulting in sufficient hydrology to support wetland development. Examples of types of wetlands include marshes, bogs, the shallow portions and shorelines of lakes, ponds, and reservoirs, seasonal wet meadows, and the floodplain and shoreline of streams.

USFWS is the principal federal agency that provides information to the public on the extent and status of the nation's wetlands. The USFWS has compiled mapping to show wetlands and deepwater habitats in the US including many parts of Oregon and has made this mapping available through access to the National Wetland Inventory (NWI). NWI wetlands are identified in general accordance with USFWS's publication *Classification of Wetlands and Deepwater Habitats of the United States*²⁸. NWI maps do not define wetlands for regulatory purposes since the wetlands are identified through aerial photo interpretation. The NWI definition of wetlands requires 1 or more of the 3 attributes of wetlands (wetland hydrology, vegetation, or soils) be present to be a wetland.

NWI mapping for the study area shows primarily estuarine and marine wetlands, freshwater ponds, and various rivers and stream channels. Three unnamed, intermittent riverine features cross Lighthouse Drive at separate locations. Two additional riverines cross US 101 within the broader area that is being considered for the study.

4.1.8. Hazardous Substances

ODEQ works to clean up contaminated properties throughout the state. ODEQ also regulates underground storage tanks on properties owned by private businesses and public entities, ensuring that the tanks are installed, managed, and monitored in a manner that prevents releases into the environment.

National Priority List (Superfund) Sites

The National Priority List is the list of hazardous waste sites throughout the US eligible for long-term remedial action financed under the federal Superfund program. A Superfund site is any land that has been contaminated by hazardous waste and identified by the US Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment. No Superfund sites exist in or near the study area.

Hazardous Waste Generators

The Yaquina Head Lighthouse is listed as a very small quantity generator in the EPA Hazardous Waste Site database. Coast Towing, located on the corner of NW 55th St and US 101, is also listed on the hazardous waste site database. No additional details are provided for this site regarding activity type or amount of waste generated. ²⁹

Hazardous Waste Release Sites

There are no hazardous waste release sites in the area. However, there are 2 hazardous waste release sites nearby³⁰:

- The **Arlo Development Co** site (US 101 and NE 32nd St.) experienced soil contamination as a result of activities at the former salvage yard. Contaminants included chromium, lead, arsenic, and benzo anthracene. A deed is in place prohibiting residential use of the property. No further action is needed.
- The **Riverbend Marine Service** (Yaquina Bay Rd) site was created entirely from historic dredge spoils. A site visit in 1997 yielded observations of spent grit entering the Yaquina River. Contaminants of concern included tributyltin, dibutyltin, monobutyltin, polycyclic aromatic hydrocarbons, colatile organic compounds, and polychlorinated biphenyls. Remedial investigation is recommended.

Underground Storage Tanks

Six underground storage tanks are located within a mile of Yaquina Head ONA.³¹ Four of the tanks are located at Agate Beach Market near the intersection of US 101 and NW 49th St. Another exists about a mile from Yaquina Head ONA at the Agate Beach Golf Course located off US 101. The last tank is on the corner of NW 55th St and US 101, about ½ mile from Yaquina Head ONA. All 6 tanks have been decommissioned. The closest active underground storage tank is about 2.2 miles away at the Chevron on the corner of NE 15th St and US 101.

Petroleum Tank Releases

No petroleum tank releases were identified in the study area. The nearest release occurred about $\frac{1}{2}$ mile from Yaquina Head ONA at Agate Beach Time, near the NW 48th St and US 101 intersection.³²

Abandoned and Inactive Mine Sites

According to the Oregon Department of Geology and Mineral Industries, no abandoned or inactive mine sites are located within or near the project area.

Landfills

No active landfills occur in the study area.

4.1.9. Air Quality

The *Clean Air Act* of 1970, as amended, is the basis for air pollution control programs. In accordance with the Act, the EPA established National Ambient Air Quality Standards (NAAQS) for 6 criteria pollutants: ozone, carbon monoxide, particulate matter (PM-2.5 and PM-10), lead, sulfur dioxide, or nitrogen dioxide. The NAAQS are health-based standards to protect human health and public welfare and set allowable concentrations and exposure limits for each criteria pollutant

The EPA and the ODEQ are charged with regulating air quality and may designate areas as attainment or nonattainment based on their history of meeting the NAAQS for pollutants of concern. Areas where air pollution levels do not exceed the air pollution thresholds established in the NAAQS are designated as "attainment" areas. "Nonattainment areas" are localities where air pollution levels persistently exceed the NAAQS, or that contribute to ambient air quality in a nearby area that fails to meet standards. An area that has been designated as nonattainment in the past, but that now complies with the NAAQS, is classified as a "maintenance" area.

Lincoln County is considered an attainment area for all pollutants, and therefore proposed transportation projects would likely not be subject to conformity requirements. However, if the area's air quality changes, conformity requirements could be implemented in the future. Any project proposed would need to examine the current status and determine if the project is subject to conformity requirements.

4.1.10. Noise

Roadway projects can cause noise levels to increase for affected receivers during project construction and/or from operation of the traffic facility. Noise impacts can potentially occur due to construction of a roadway on a new location or the physical alteration of an existing roadway which significantly changes either the horizontal or vertical alignment or increases the number of through-traffic lanes.

Residences in the study area are sensitive noise receptors that could be affected by roadway improvements within Yaquina Head ONA. Sites protected under Section 4(f) of the U.S. Department of Transportation Act and Section 6(f) of the Land and Water Conservation Fund Act within the study area may also be considered sensitive noise receptors. Improvements in the area may require a noise analysis. Detailed noise analyses are often conducted when the potential for noise impacts exists due to substantial changes in roadway design or configuration.

Construction activities associated with improvements within Yaquina Head ONA may result in localized and temporary noise impacts in the vicinity of residences. These impacts can be minimized by incorporating measures to control noise sources during construction.

4.2. Biological Resources

The following information applies to the biological environment within the study area and reflects baseline natural resource conditions. Depending on the level of detail available, some of the information is presented at the county level, some at the study area level, and some at the statewide level.

4.2.1. Vegetation

Several vegetation types occur within the Yaquina Head ONA study area, including mixed hardwood and coniferous forest, coastal spruce, and western hemlock forest. The majority of Yaquina Head ONA is classified as conifer, developed, or non-vegetated.

Invasive weeds are a growing concern in Lincoln County, Oregon. Nine species of noxious weeds are known to occur within the study area. All are designated as 'List B' by the State of Oregon, meaning they are regionally abundant but may have limited distribution in some counties. Intensive control measures for these weeds are conducted at the state, county, or regional level and are determined on a case-by-case basis. The known noxious weeds within the study area are knotweed, herb Robert, ivy, giant knotweed, Armenian blackberry, field bindweed, bull thistle, Canada thistle, and St. Johnswort. Lincoln County's Vegetation Management program has been active in education, control, and eradication of noxious weeds. If improvement options are forwarded from this feasibility study, field surveys for noxious weeds should take place before any ground disturbance occurs. Proposed projects should incorporate applicable practices outlined by Lincoln County.

4.2.2. Fish and Wildlife

Bird observation is a common activity at Yaquina Head ONA. During the breeding season, typically from May to August, seabird breeding colonies can be observed within close range of Yaquina Head ONA facilities. According to the USFWS, 5 species of seabird and 1 shorebird species breed on the coast at Yaquina Head ONA. Two varieties of cormorants can be observed: Brandt's and Pelagic. The Brandt's cormorants in the area typically nest on the rock tops along the coast, and the Pelagic cormorants nest among the cliff faces. Pigeon guillemots and western gulls are also observed along the cliff ledges. Black osytercatchers frequent the tides in search of food. The common murre, an abundant seabird in Oregon, is often observed on the nearshore sea stacks. Other birds that frequent or pass through Yaquina Head ONA include brown pelicans, bald eagles, spring harlequin ducks, surfbirds, and black turnstones.

Other wildlife that are commonly observed in the area are gray whales and harbor seals. Gray whales pass by Yaquina Head ONA just off the coast, and harbor seals can be observed with their young resting on the coastal rocks, which are managed by the USFWS as part of the Oregon Islands National Wildlife Refuge. They provide sanctuary for the harbor seals and seabirds and are closed to public access year-round.

If any improvement projects are brought forward from the study, project planners should coordinate with fish and wildlife biologists from Oregon FWP and the USFWS to gain further insight into issues related to the management of these species, as well as measures for avoiding, minimizing, or mitigating adverse effects on species and habitat.

4.2.3. Threatened and Endangered Species

Section 7(a)(2) of the ESA of 1973, as amended, requires federal agencies to review actions they authorize, fund, or carry out, and to ensure such actions do not jeopardize the continued existence of federally listed species, or result in the destruction or adverse modification of designated critical habitat. **Table 4.1** shows the ESA listed species that may potentially occupy the study area or be affected by projects in the vicinity (as of September 23, 2021) as defined by the USFWS Oregon Fish and Wildlife Office.

| Species | Federal Status | Typical Habitat | | | |
|---|-------------------------|--|--|--|--|
| Pacific Marten (Martes caurina) | Listed as Threatened | The pacific marten is a medium-sized carnivore in the weasel family. They are forest- dwelling mammals that are native to coastal Oregon and coastal California. They tend to select older forests as their primary habitat, but they have also been known to reside in younger forests where a dense understory development is present. Their range generally spans from the central California coast to the northern Oregon coast. | | | |
| Marbled Murrelet (Brachyramphus marmoratus) | Listed as Threatened | The marbled murrelet, a small diving seabird, is generally found all along the western coast of the United States. They typically spend most of their time on the ocean but come inland (up to 50 miles) to nest. Their nests are usually in large trees that offer branches or deformities for use as a platform. | | | |
| Northern Spotted Owl (Strix occidentalis caurina) | Listed as Threatened | The northern spotted owl lives in forests with dense canopy closure. They typically prefer forests with older growth characteristics. A large number of the population resides on the Olympic peninsula. Other locations where the population is known or believed to occur include British Columbia, the Cascade Mountains of northern Washington, and the coast ranges of southwest Washington and northwest Oregon. | | | |
| Western Snowy Plover (Charadrius nivosus nivosus) | Listed as Threatened | The western snowy plover is a small shorebird found along the coasts of California, Oregon, and Washington. Nesting season usually occurs from early march through late September. They typically nest in flat, open areas on coastal beaches. | | | |
| Short-tailed Albatross (Phoebastria albatrus) | Listed as Endangered | The majority of the short-tailed albatross population is known to nest on Torishima Island of Japan. They are also believed to occupy the Pacific Ocean off the Oregon Coast. | | | |
| Leatherback Sea Turtle (Dermochelys coriacea) | Listed as Endangered | The leatherback sea turtle, the largest turtle in the world, occupies a vast range of oceans and beaches around the world, including the US western Pacific coast. | | | |
| Loggerhead Sea Turtle (Caretta caretta) | Listed as Endangered | The loggerhead turtle, while more common along the Atlantic coast, is also known to live in Oregon coastal waters. Most adults that nest on US beaches migrate from neighboring countries such as Mexico, Cuba, and the Bahamas. | | | |
| Olive Ridley Sea Turtle (Lepidochelys olivacea) | Listed as Threatened | The olive ridley sea turtle, one of the world's smallest sea turtles, is found throughout the world. In the US, populations are found along the coasts of Oregon, California, and Hawaii. | | | |
| Oregon Silverspot Butterfly (Speyeria zerene Hippolyta) | Listed as Threatened | The Oregon silverspot butterfly occurs in Cascade Head, Oregon, approximately 34 miles north of Newport. It is additionally believed to likely occur in the Nestucca Bay National Wildlife Refuge approximately 34 miles north of Newport. | | | |

Table 4.1: Threatened and Endangered Species Impacted by the Study Area

Source: U.S. Fish and Wildlife Services, Oregon Fish and Wildlife Office

All of the listed species are known or believed to either reside within the study area or have the potential to be indirectly affected by project activities within the study area. The above list was defined by the USFWS office of Oregon using the known or expected habitat range of each species. Species often move and habitats change, therefore the listed species are not guaranteed to be found within or near the study area.

In 2015, an Environmental Assessment (EA)³³ was conducted for Yaquina Bay to assess potential environmental impacts from river maintenance dredging. A portion of the EA involved a Biological Assessment (BA) to examine potentially affected threatened and endangered species in the area. The USFWS provided a determination of "no effect" for the silverspot butterfly.

4.2.4. Other Species of Concern

The red tree vole is a small rodent that inhabits treetops and rarely ventures to ground level. Their principal diet consists of conifer needles, which is enough to sustain them. Adult red tree voles tend to live alone and only come together to breed. Their home ranges are often less than half an acre.

Red tree voles are native to coniferous forests west of the crest of the Cascade Mountains in Oregon and northwestern California and generally are found at lower elevations. In Oregon, the red tree vole occurs in the region from the Cascade crest to the Pacific coast. The north coast, which includes Lincoln County, is the primary management concern for the species.

Habitat loss is the main cause for concern for the red tree vole. Given that they are primarily a tree-dwelling species, they are very vulnerable to activities that potentially cause tree reduction or disturbance. Activities of concern include development, recreation, and road construction.³⁴

4.3. Social and Cultural Resources

The following subsections present an overview of the social and cultural environment within the study area.

4.3.1. Demographic Conditions

Implementing regulations for the National Environmental Policy Act (NEPA) require federal agencies to assess potential social and economic impacts resulting from proposed actions. FHWA guidelines recommend consideration of impacts to neighborhoods and community cohesion, social groups including minority populations, and local and/or regional economies, as well as growth and development that may be induced by transportation improvements. Demographic and economic information presented in this section is intended to assist in identifying populations that might be affected by improvements in the study area.

According to the *American Community Survey* (ACS), the city of Newport is slightly more diverse, racially and ethnically, than both Lincoln County and the state of Oregon. Persons identifying as White make up approximately 71 percent of the population in Newport, 83 percent of the population in Lincoln County, and 76 percent of the population in Oregon. The percentage of the population identifying as Hispanic or Latino is greater in Newport (20 percent) compared to Lincoln County (9 percent) and Oregon (13 percent). Persons identifying as Black or African American make up nearly 2 percent of the population in Oregon and Newport compared to 0.6 percent in Lincoln County. The percent of the statewide population identifying as Asian is about 4 percent in Oregon and approximately 2 percent and 1 percent in Newport and Lincoln County, respectively. For all other races, the city, county, and state have comparable population distributions. **Table 4.2** displays the summarized demographic data.

Title VI of the *United States Civil Rights Act of 1964* and *Executive Order 12898* require that projects receiving federal funds must not result in disproportionately high and adverse effects on minority or low-income populations. For transportation projects, this means that minority or low-income populations must not be disproportionately isolated, displaced, or otherwise subjected to adverse effects. If improvement options are forwarded from the planning study into project development, environmental justice would need to be further evaluated during the project development process. However, demographic data obtained for this study indicates minority and/or low-income populations are present in the area.

Table 4.2: Demographic Characteristics Near the Study Area

| Population | | 10,559 | 48,547 | 4,129,803 |
|----------------------------|---|--------|--------|-----------|
| | White (not Hispanic or Latino) | 70.9% | 82.5% | 75.7% |
| с S | Hispanic or Latino | 20.3% | 9.2% | 13.0% |
| /Ethnic teristic | Black or African American | 1.9% | 0.6% | 1.9% |
| al/El icter | Racial Elack or African American American Indian or Alaska Native Asian | 2.0% | 2.8% | 1.2% |
| Racial <i>,</i> Charact | Asian | 1.7% | 1.2% | 4.4% |
| | Some Other Race | 8.4% | 2.6% | 3.5% |
| | Two or more races | 5.6% | 4.6% | 4.8% |

Environmental Justice

Title VI of the *United States Civil Rights Act of 1964* prohibits recipients of federal financial assistance from discriminating based on race, color, or national origin in any program or activity. In 1994, EO 12898 was issued to direct federal agencies to incorporate achieving environmental justice into their mission. Environmental justice is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.

To better meet responsibilities related to the protection of public health and the environment, the EPA has developed an environmental justice mapping and screening tool called EJSCREEN based on nationally consistent data and an approach that combines environmental and demographic indicators in maps and reports.

While the EJSCREEN report (**Appendix E**) indicates that most environmental and demographic indicator values for Yaquina Head ONA are below comparable values for the State of Oregon, EPA Region, and the nation, minority and/or low-income populations are present in the area. If improvement options are forwarded from this study into project development, environmental justice would be evaluated during the project development process.

4.3.2. Cultural and Historic Resources

The OCZMA has classified the Yaquina Head Lighthouse as being of natural historic significance, and it is denoted with a Lincoln County Historical Society marker. The site is also listed on the National Register of Historic Places (NRHP). The NRHP is an official list of historic places in the US that have been deemed worthy of preservation. Qualified historic locations may receive preservation assistance and incentives.

Data about Indian Tribes with potential interests in the study area was obtained from the Tribal Directory Assessment Tool (TDAT) available from the website of the US Department of Housing and Urban Development. TDAT has the ability to link tribes' geographic areas of current and ancestral interest down to the county level and provides tribal contact information to assist users with initiating Section 106 consultation under the *National Historic Preservation Act*. The TDAT search identified the following tribes with potential interests in Lincoln County:

- Confederated Tribes of Siletz Indians of Oregon
- Confederated Tribes of the Grand Ronde Community of Oregon
- Confederated Tribes of the Warm Springs Reservation of Oregon

If improvement options are forwarded from this study into project development, evaluation of impacts to cultural and historic resources and consultation with state and tribal entities would be required during the project development process.

4.3.3. Section 4(f) Resources

Projects that receive federal funding and/or discretionary approvals from the FHWA must demonstrate compliance with *Section 4(f) of the Department of Transportation Act of 1966* (23 U.S.C. § 138 and 49 U.S.C. § 303). Section 4(f) protects publicly owned public parks, recreation areas, wildlife/waterfowl refuges, and historic sites of national, state, or local significance on public or private land that are potentially eligible for listing or are listed on the NRHP. The regulations require coordination with the official(s) with jurisdiction when making determinations about the use of protected properties or resources.

The Yaquina Head Lighthouse is listed on the NRHP and impacts to the study area should be investigated and appropriately considered in accordance with Section 4(f) if improvement options are forwarded from this study. The Ernest Bloch House, located at 116 NW Gilbert Way is also listed on the NRHP and could potentially be impacted by improvements within the broader study area.

If a project uses a Section 4(f) property and a finding of *de minimis* impact is not made, FHWA can approve the use of that property only if the agency finds that (1) there is no feasible and prudent avoidance alternative to the use of the Section 4(f) property, and (2) all possible planning to minimize harm to the Section 4(f) property has been incorporated into the alternative.

4.3.4. Section 6(f) Resources

Projects may also be subject to *Section 6(f) of the Land and Water Conservation Fund (LWCF) Act* which was enacted to preserve, develop, and ensure the quality and quantity of outdoor recreation resources. Section 6(f) protection applies to public recreational sites purchased or improved with LWCF funds. Section 6(f)(3) of the Act prevents conversion of lands purchased or developed with LWCF funds to non-recreation uses, unless the Secretary of the Department of the Interior, through the National Park Service, approves the conversion. Conversion may only be approved if it is consistent with the comprehensive statewide outdoor recreation plan in force when the approval occurs, and the converted property is replaced with other recreation property of at least equal fair market value and of reasonably equivalent usefulness and location.

It does not appear that any recently LWCF funded projects in Oregon are within the vicinity of the study area.

4.3.5. Visual Resources

The visual resources of an area include the features of its landforms, vegetation, water surfaces, and cultural modifications including physical changes caused by human activities that give the landscape its visual character and aesthetic qualities. Landscape features, natural appearing or otherwise, form the overall impression of an area. Visual resources are typically assessed based on landscape character (what is seen), visual sensitivity (human preferences and values regarding what is seen), scenic integrity (degree of intactness and wholeness in landscape character), and landscape visibility (relative distance of seen areas) of a geographically defined view shed.

The study area boasts a high level of scenic quality. Protruding approximately a mile into the Pacific Ocean, Yaquina Head ONA is comprised of lush greenery, sandy beaches, and a dark basalt coast. The rocky areas of Cobble Beach provide excellent tidepool viewing opportunities. The *City of Newport Comprehensive Plan*

expanded the Ocean Shorelands Boundary in 1991 to include Yaquina Head as a major visual resource of the Newport area due to the seaward exposure of the headland.

Actions that may have visual impacts include projects on new locations or that involve expansion, realignment or other changes that could alter the character of an existing landscape or move the roadway closer to residential areas, parks and recreation areas, historic or other culturally important resources.

5.0. AREAS OF CONCERN AND CONSIDERATION

The following is a summary of observed trends and areas for further consideration. These areas were identified through review of as-built drawings, field review, past studies, public databases, and discussions with BLM staff and other stakeholders.

5.1. Transportation System

Section 2 identifies physical features and operational characteristics, geometric conditions, traffic conditions, and safety trends within the study area. The following transportation system conditions were noted as areas of concern or consideration. Project-level traffic, geometric, or safety analysis may be required for any improvements forwarded from this study.

Physical Features and Operational Characteristics

- Inefficient circulation occurs at the entrance station and within the Yaquina Head ONA parking areas, including Quarry Cove, Interpretive Center, and Lighthouse Circle.
- Inappropriate parking sometimes occurs in designated parking areas and in informal pullouts along Lighthouse Drive.
- Visitors are often frustrated with entrance station delays and traffic cones used at the Interpretive Center, resulting in unsafe bypass or turning maneuvers. Visitor frustration also occurs due to lack of available parking at Lighthouse Circle.
- Additional large vehicle and ADA parking stalls are desired throughout the site.
- Large vehicle circulation is challenging in some parking areas within the site.
- Right-of-way varies through the study area, with narrow BLM right-of-way occurring just before the entrance station.
- Overhead and underground utilities are located adjacent to Lighthouse Drive and US 101 throughout the study area.
- Multiple locations on Lighthouse Drive and the Quarry Cove access road exhibit poor pavement conditions.
- Lighthouse Drive lacks dedicated pedestrian facilities between the US 101 intersection and the entrance station, and gaps in pedestrian facilities occur along the Quarry Cove access roadway. Additionally, there is poor multimodal connectivity to facilities outside the study area.
- The Yaquina Head ONA lacks designated crosswalks in key locations where pedestrians typically cross Lighthouse Drive.

Traffic Conditions

- Speeding was noted as a concern by staff and the public. Speeding was observed in 15 mph zones on the Quarry Cove access road and near the Keeper's Garden.
- Long delays are experienced at the entrance station.

- The US 101 intersection typically operated at LOS C during the spring of 2021. However, LOS E occurred during 2021 summer peak periods.
- If traffic grows in the manner predicted by the TSP, Lighthouse Drive could experience traffic volumes greater than 3,000 during the peak summer season within the next 20 years.
- Compared to existing conditions, peak-hour operations at the US 101 intersection are projected to degrade by 2042. Failing traffic conditions and significant delays are projected during all peak hours in both the summer and spring seasons. The current intersection configuration will not adequately accommodate future traffic volumes.

<u>Safety</u>

- The study area lacks dedicated pedestrian facilities, creating potential conflicts with vehicles. Within the Yaquina Head site, pedestrian-vehicle conflicts create safety concerns on Lighthouse Drive, at the entrance station, within parking areas, and at key crossing locations.
- Vehicles have been observed performing unsafe turnaround maneuvers at the entrance station and the Interpretive Center.
- Poor visibility creates a safety concern for pedestrians at existing crosswalks and curves on Lighthouse Drive.
- Staff safety at the entrance station is a concern during periods of high visitation when line busting is conducted in live traffic.

5.2. Environmental Setting

Section 4 identifies physical, biological, social, and cultural resources within the study area that may be affected by potential future improvements arising from the *Yaquina Head Traffic Study*. Project-level environmental analysis would be required for any improvements forwarded from this study. Information contained in this memorandum may be used to support future environmental documentation for compliance with NEPA. The following environmental concerns were noted.

Physical Environment

- Lands surrounding Yaquina Head ONA are mostly privately held, although some bordering lands are owned by the City of Newport and Lincoln County. BLM owns the nearly 100 acres of Yaquina Head ONA including all roads.
- The right-of-way for Lighthouse Drive and US 101 is held in public interests.
- Several landslides have occurred in areas adjacent to Yaquina Head ONA. The majority of Yaquina Head ONA is considered to be at moderate to high risk for landslide occurrence. Steep slopes occur near the entrance station and at the Interpretive Center.
- Yaquina Head ONA is located in a region that is expected to experience very strong to severe shaking in the instance of an earthquake.
- The shorelines surrounding Yaquina Head ONA are considered to be at very high risk for coastal erosion.
- Three unnamed, intermittent streams cross Lighthouse Drive and only hold water during wet portions of the year. Two perennial streams, Little Schooner Creek and another unnamed stream, cross US 101.
- The Moolack Creek Watershed is rated as impaired for aquatic life.

- The entirety of Lighthouse Drive runs adjacent to the coastal floodplain, but the roadway itself lies outside of the floodplain boundary. A small area on the end of Quarry Cove Road lies within the coastal floodplain boundary.
- Residences near the study area comprise the only sensitive noise receptors that could be affected by improvements within Yaquina Head ONA.

Biological Resources

- Mixed hardwood and coniferous forest, coastal spruce, and western hemlock forest occur within the Yaquina Head ONA study area.
- Invasive weeds are a growing concern in Lincoln County. Nine species of noxious weeds are known to occur within the study area.
- Grey whales, harbor seals, and various species of birds frequent Yaquina Head ONA and the surrounding coastal waters.
- Nine threatened or endangered species and 1 species of concern may be affected or indirectly affected by improvements within the study area.

Social and Cultural Resources

- Minority and/or low-income populations are present in the area. Environmental justice would need to be further evaluated during any future project development process.
- The Yaquina Head lighthouse and the Ernest Bloch House are on the NRHP and may be subject to Section 4(f) protections.
- The study area boasts a high level of scenic quality. Improvement activities within the study area may have visual impacts, and consideration should be taken to minimize the effects.

Open File Report O-95-28 Tsunami Hazard Map of the Newport North Quadrangle, Lincoln County, Oregon

> **Tsunami inundation boundary** upper limit of area expected to be covered by flood water from a tsunami caused by a magnitude 8.8 undersea earthquake

See accompanying text for use of this map, mapping methodology, and acknowledgments.

Mapping by:

George R. Priest, Oregon Department of Geology and Mineral Industries, October-November, 1995.

WHAT TO KNOW about tsunamis A **tsunami** is a series of sea

- undersea earthquake. As tsunamis enter shallow water near land, they increase in height and can waves, usually caused by a displacement of the ocean floor by an property damage.
- over the last 500 years have been 20–65 feet at the shoreline. However, because of local conditions Recent research suggests that tsunamis have struck the Oregon coast on a regular basis. They can occur any time, day or night. Typical wave heights from tsunamis occurring in the Pacific Ocean
- We distinguish between a tsunami caused by an undersea earthquake near the Oregon coast (a **local** tsunami) and an undersea earthquake far away from the coast (a **distant** tsunami).

tsunamis Area Climb to Assembly

A local tsunami can come onshore Local

TSUNAMI HAZARD ZONE

 before there is time shaking from the earthquake may national warning system. Ground within 15 to 20 minutes after the for an official warning from the

WHAT TO DO for both local and distant tsunamis

Follow evacuation signs and arrows Evacuate on foot, if at all possible. to an Assembly Area.*

- If you need help evacuating, tie something Ч.
- tsunami, it is unlikely that anyone will help you, so make a plan white (sheet or towel) to the front door knob. Make it large distant tsunami, then help may arrive. In the event of a local enough to be visible from the street. If the emergency is a and be prepared!
- Local officials must inspect all flooded or earthquake-damaged an ALL CLEAR from local officials. Tsunamis often follow river Stay away from potentially hazardous areas until you receive channels, and dangerous waves can persist for several hours. structures before anyone can go back into them. **m**
- 4. After evacuation, check with local emergency officials if you think you have special skills and can help, or if you need assistance locating lost family members.

*Assembly areas A are shown on the map. Do not confuse Assembly Areas with Evacuation Centers, which are short-term help centers set up *after* a disaster occurs.

A **distant tsunami** will take 4 hours or more to come ashore. You will feel no earthquake, and the tsunami will generally be smaller than that from a local earthquake. Typically, there is time for an official warning and evacuation to safety.

area has been put into an official TSUNAMI WARNING. If you do not hear an announcement, a **sudden change of sea level** Evacuation for a distant tsunami will generally be indicated by an announcement over NOAA weather radio that the local should prompt you to move immediately to high ground. If you see a sudden sea level change, first evacuate away from shoreline areas, then turn on your local broadcast media or NOAA weather radio for more information.

If you feel an earthquake, a tsunami may be coming...

WHAT TO DO:

- **DROP, COVER, HOLD** until the earthquake is over; protect yourself
- MOVE IMMEDIATELY INLAND to high ground and away from low-lying coastal areas
- FOLLOW EVACUATION ROUTE SIGNS
 - DO NOT WAIT for an official warning GO ON FOOT if at all possible
 - - DO NOT PACK or delay
- large waves may continue to come onshore for several hours DO NOT RETURN to the beach
- WAIT for an "all clear" from local emergency officials before returning to low-lying areas

www.OregonTsunami.org

BE PREPARED!

Assemble **emergency kits** with at least a 2-week supply for each family member: • Local map showing safe evacuation routes to high ground • First-aid supplies, prescriptions and non-prescription

- - medication
 - Water bottle and filtration or treatment supplies capable of providing 1 gallon per person per day
 Non-perishable food (ready-to-eat meals, canned food, baby food, energy bars)
 Cooking and eating utensils, can opener, Sterno[®] or other heat source
- Matches in water-proof container or lighter
 Shelter (tent), sleeping bags, blankets
 Portable radio, NOAA weather radio, flashlight
- and extra batterie
- Rain gear, sturdy footwear, extra clothing Personal hygiene items (toilet paper, soap, toothbrush) Tools and supplies (pocket knife, shut-off wrench, duct tape, gloves, whistles, plastic bags) Cash
- How to help with tsunami awareness
- in your community

- start a tsunami buddy sytem
 make and distribute emergency packs
 initiate or participate in a local preparedness program

Appendix B5: EJSCREEN Report

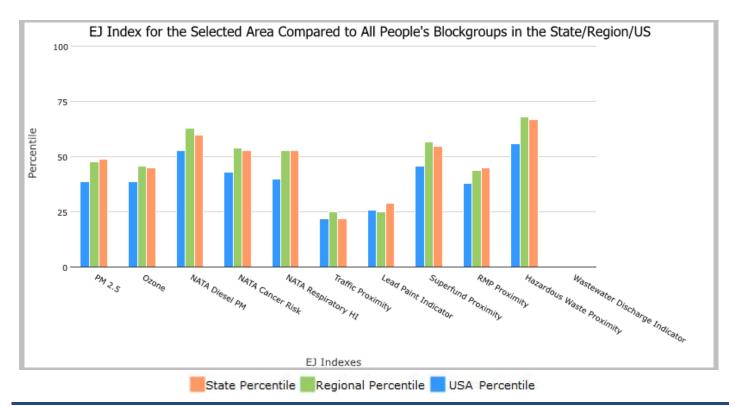

EJSCREEN Report (Version 2020)

the User Specified Area, OREGON, EPA Region 10

Approximate Population: 241 Input Area (sq. miles): 0.76

| Selected Variables | State Percentile | EPA Region Percentile | USA Percentile |
|---|---------------------|--------------------------|-------------------|
| EJ Indexes | | | |
| EJ Index for PM2.5 | 49 | 48 | 39 |
| EJ Index for Ozone | 45 | 46 | 39 |
| EJ Index for NATA [*] Diesel PM | 60 | 63 | 53 |
| EJ Index for NATA [*] Air Toxics Cancer Risk | 53 | 54 | 43 |
| EJ Index for NATA [*] Respiratory Hazard Index | 53 | 53 | 40 |
| EJ Index for Traffic Proximity and Volume | 22 | 25 | 22 |
| EJ Index for Lead Paint Indicator | 29 | 25 | 26 |
| EJ Index for Superfund Proximity | 55 | 57 | 46 |
| EJ Index for RMP Proximity | 45 | 44 | 38 |
| EJ Index for Hazardous Waste Proximity | 67 | 68 | 56 |
| EJ Index for Wastewater Discharge Indicator | N/A | N/A | N/A |

This report shows the values for environmental and demographic indicators and EJSCREEN indexes. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSCREEN documentation for discussion of these issues before using reports.

* The National-Scale Air Toxics Assessment (NATA) is EPA's ongoing, comprehensive evaluation of air toxics in the United States. EPA developed the NATA to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that NATA provides broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. More information on the NATA analysis can be found at: https://www.epa.gov/national-air-toxics-assessment.

For additional information, see: www.epa.gov/environmentaljustice

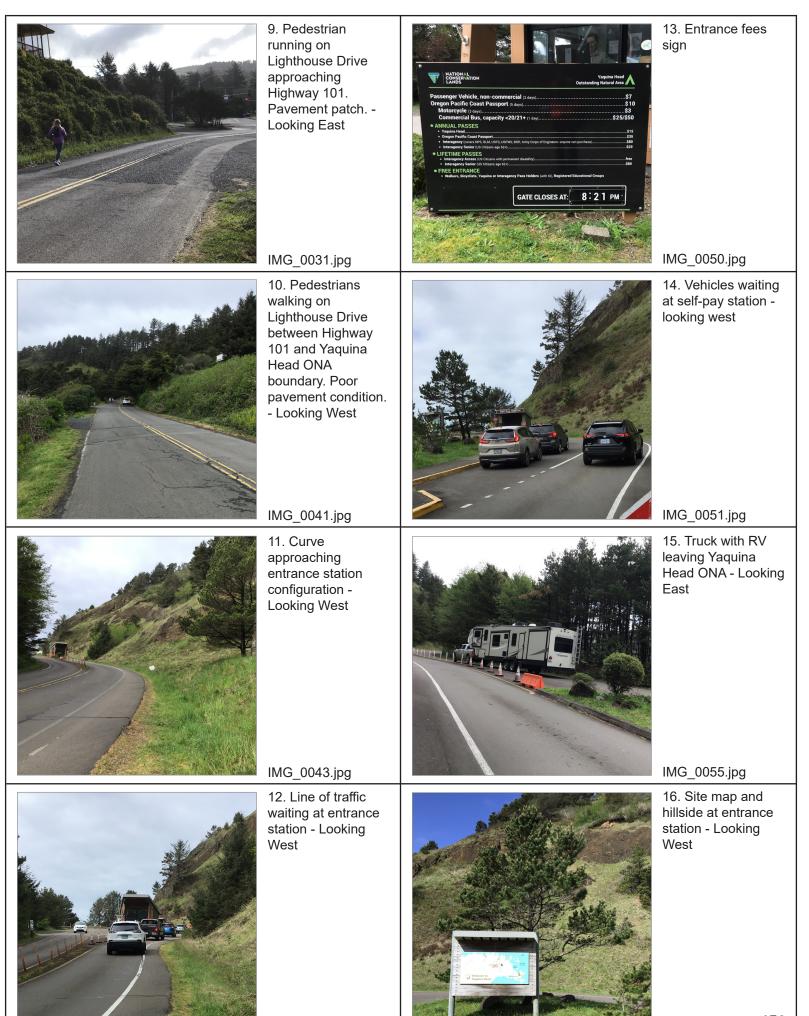

EJSCREEN is a screening tool for pre-decisional use only. It can help identify areas that may warrant additional consideration, analysis, or outreach. It does not provide a basis for decision-making, but it may help identify potential areas of EJ concern. Users should keep in mind that screening tools are subject to substantial uncertainty in their demographic and environmental data, particularly when looking at small geographic areas. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJSCREEN documentation for discussion of these issues before using reports. This screening tool does not provide data on every environmental impact and demographic factor that may be relevant to a particular location. EJSCREEN outputs should be supplemented with additional information and local knowledge before taking any action to address potential EJ concerns.

Appendix C: Alternatives Analysis

ENTRANCE STATION – OPTION A

DESCRIPTION:

Entrance station would remain in its existing location. A second entrance lane and second fee station would be provided as well as a separated shared use path (SUP) on either the north or south side of the roadway. A two-way loop through the host area would accommodate turnaround maneuvers for BLM staff and camp hosts.

TRAFFIC PERFORMANCE:

automated fee machine (AFM)

• All attractions would remain

kiosks in fee booths would expedite

entrance times and reduce queues.

located west of entrance station/

ENVIRONMENTAL IMPACTS:

• Dual entrance lanes with

ADVANTAGES:

within fee area.

ADVANTAGES:

- **DISADVANTAGES:**
- Visitors must pass fee booth before turning around to exit the site.
- Lacks area for exiting vehicles to bypass another vehicle stopped to talk with rangers at the entrance station.
- both fee booths are staffed.

- An additional parking space may be necessary if

MANAGEMENT/MAINTENANCE:

ADVANTAGES:

- BLM staff don't have to stand in the roadway to conduct line-busting.
- Two entry lanes provides flexibility based on staffing capacity. One lane could be closed or automated during the off season.

SAFETY PERFORMANCE:

ADVANTAGES:

- Separated SUP would provide protection for non-motorists and physical separation from vehicles.
- BLM staff wouldn't have to stand in the roadway to conduct line-busting.
- Visitors wouldn't have to walk to fee booth to collect pass after paying at the AFM kiosk.
- Depending on where SUP is located (north or south side of Lighthouse Drive), pedestrians would have direct access to Ernest Bloch Memorial Wayside or to a potential future SUP connection on NW Rocky Way.

GEOTECHNICAL FEASIBILITY AND OVERALL CONSTRUCTABILITY:

ADVANTAGES:

LEGEND

• Option would use existing power and wastewater utility connections.

 Vegetation would be incorporated in medians where feasible.

DISADVANTAGES:

- Expansion of the roadway footprint would be required on north side of the roadway.
- SUP would increase paved area.
- To facilitate the two-way loop through the camp host area, a new approach roadway is needed with signficant impacts.

DO NOT ADVANCE **RECOMMENDATION:**

New access road to camp host area would be very impactful with little added benefit. Limited space for expansion of roadway footprint may preclude the ability to construct this option.

DISADVANTAGES:

- BLM staff must circulate through the camp host area to turn around; potential loss of privacy for hosts.
- Increased maintenance required for SUP.

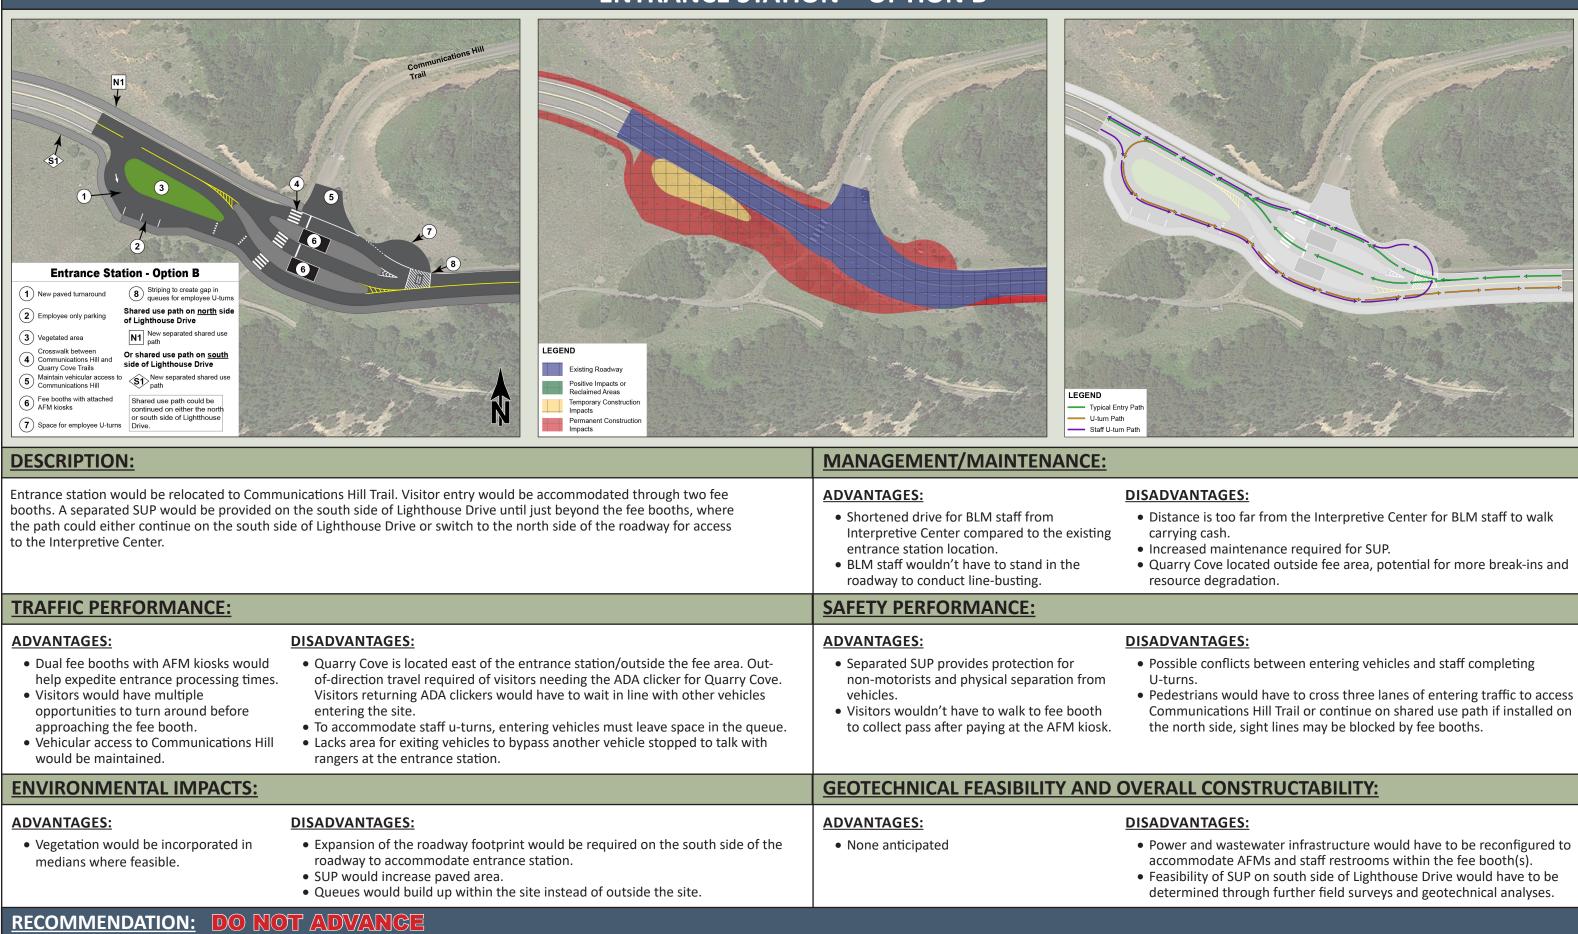

DISADVANTAGES:

- Possible conflicts with the two-way traffic exiting the camp host area and visitors turning around.
- Increased number of merging and diverging conflict points compared to the existing configuration.
- Path on the north side may present a safety concern due to recent landslide/rockfall issues.

DISADVANTAGES:

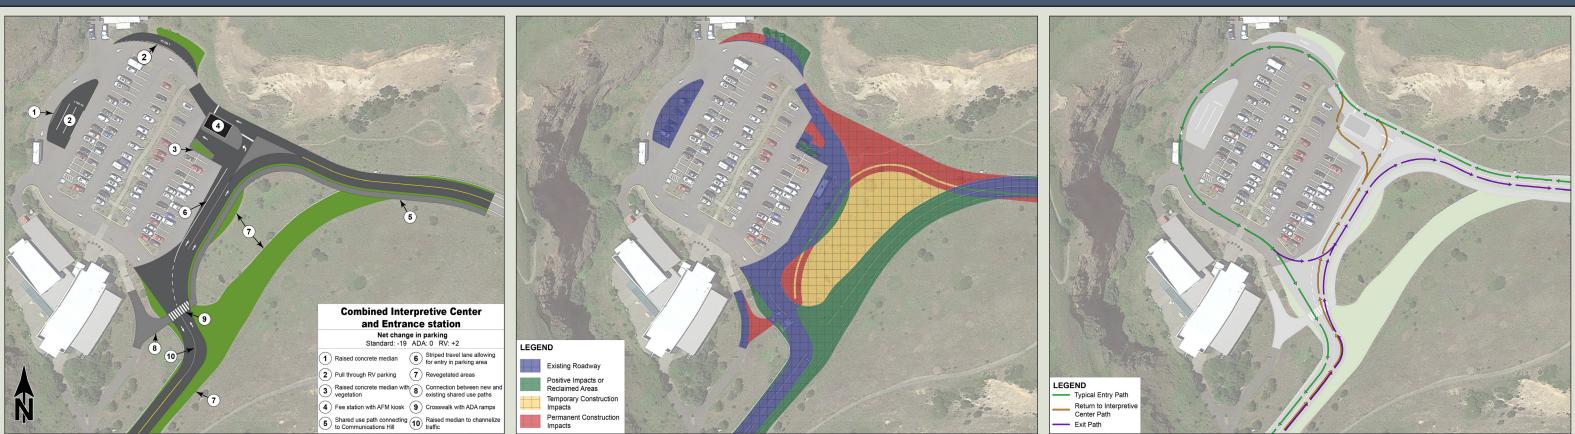

- Potential constraint on north side of entrance station due to steep hillsides.
- Limited right-of-way on south side of roadway for expansion.
- Length of second entrance lane may be dictated by geotechnical constraints on north side of the roadway.

ENTRANCE STATION – OPTION B

Location of fee station in relation to Quarry Cove would be undesirable from a management and visitor experience perspective. Considerable impacts and utility costs would be required to accommodate entrance station at this location.

COMBINED INTERPRETIVE CENTER AND ENTRANCE STATION

DESCRIPTION:

Entrance station would be relocated to the parking lot of the Interpretive Center. All traffic would circulate through the Interpretive Center parking lot by an approach road where the existing dog walk is located. The existing roadway between the new approach and the existing entrance/exit would be obliterated and revegetated. The existing RV/bus parking lane would be replaced with travel lanes and relocated to the northwest end of the parking lot. Additional RV/bus parking would be provided by the maintenance building. A SUP would be provided on the south side of Lighthouse Drive which connects to the existing SUP near the Interpretive Center.

• Net loss of 19 standard parking spaces.

TRAFFIC PERFORMANCE:

ADVANTAGES:

- All westbound visitors must circulate through the Interpretive Center parking lot, potentially reducing parking concerns at the lighthouse.
- Net gain of 2 RV parking stalls.
- AFM kiosk located in fee booth would help expedite processing time.
- Redirected westbound traffic into the Interpretive Center is potentially more logical to visitors.

Although new pavement is added, existing

pavement is removed and revegetated.

ENVIRONMENTAL IMPACTS:

ADVANTAGES:

DISADVANTAGES:

DISADVANTAGES:

Lighthouse Drive.

- None anticipated • Considerable temporary impacts to hillside during construction.
- Dog walk area may no longer be safely accessible and usable.
- Queues would build up within the site instead of outside the site.

Potential for increased congestion within the Interpretive Center parking area.

• Only one fee booth could be accommodated so processing times may not be improved.

already have a pass or not. This could contribute to visitor frustration and long queues on

• Quarry Cove and Communications Hill are located east of the entrance station/outside the

• New configuration and circulation pattern may be confusing and/or frustrating for visitors.

fee area. Out-of-direction travel required of visitors needing the ADA clicker for Quarry Cove.

• All westbound vehicles must travel through the fee booth, regardless of whether they

- Separated SUP provides protection for nonmotorists and physical separation from vehicles.
- Visitors wouldn't have to walk to fee booth to

RECOMMENDATION: DO NOT ADVANCE

Although this option simplifies BLM staffing needs for the entrance station, management of facilities outside the fee area would be difficult. Poor traffic performance is anticipated.

- **ADVANTAGES:** Location of fee booth in Interpretive Center
- parking lot would simplify operations, allow staff to address issues more quickly, and reduce travel time between the Interpretive Center and the fee booth.
- **SAFETY PERFORMANCE:**

ADVANTAGES:

ADVANTAGES:

- collect pass after paying at the AFM kiosk.

MANAGEMENT/MAINTENANCE:

DISADVANTAGES:

- Single-lane configuration would not allow the opportunity to expedite/split visitor processing.
- Increased maintenance required for SUP.

DISADVANTAGES:

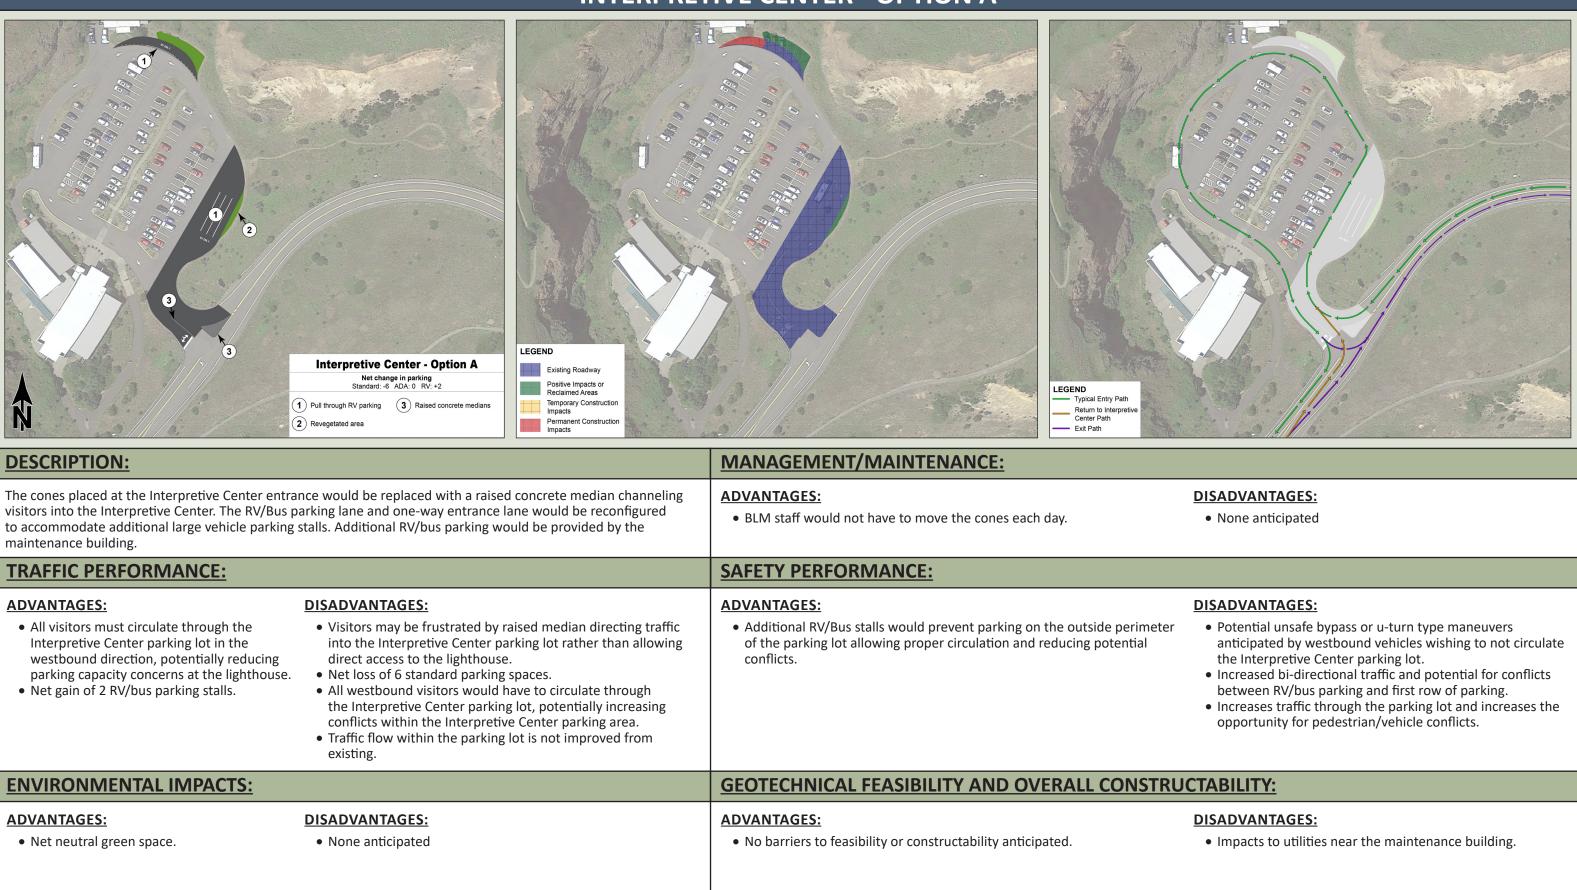

- Potential conflicts anticipated between eastbound vehicles entering the Interpretive Center parking lot and vehicles leaving the Interpretive Center.
- Increases traffic through the parking lot and increases the opportunity for pedestrian/ vehicle conflicts.

GEOTECHNICAL FEASIBILITY AND OVERALL CONSTRUCTABILITY:

DISADVANTAGES:

• Utilities would have to be extended to accommodate the fee booth. • Feasibility of new entrance road would have to be determined through further field surveys and geotechnical analyses due to steep slopes and potentially constraining rock faces near the proposed entrance station.

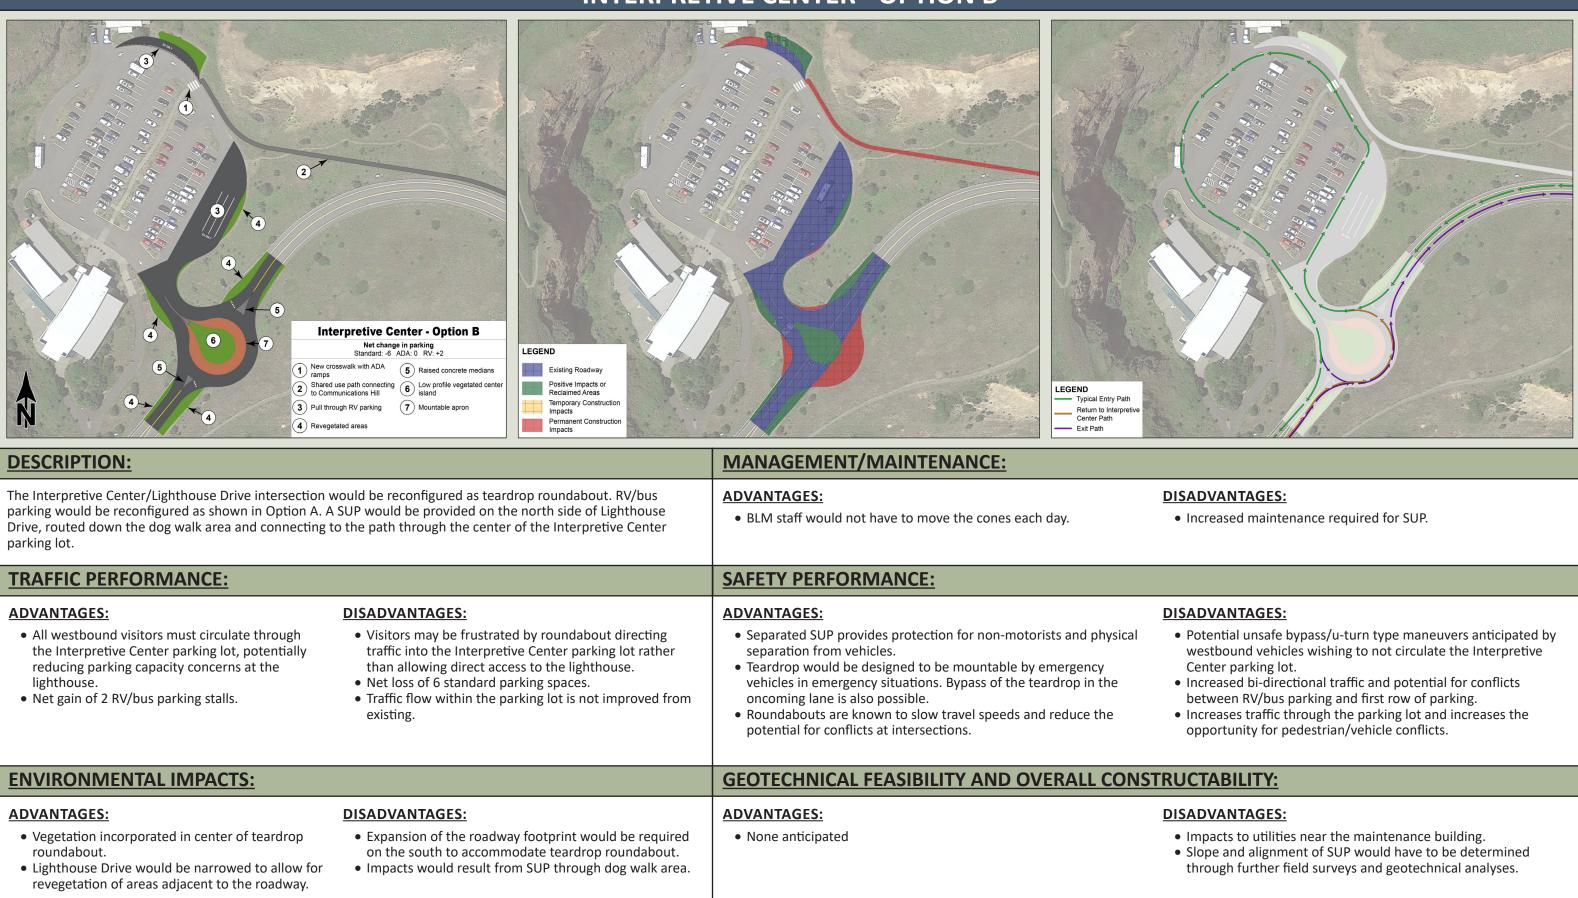

INTERPRETIVE CENTER - OPTION A

<u>RECOMMENDATION:</u> DO NOT ADVANCE

This option would reduce BLM staffing needs by replacing the temporary cones with a concrete median, however, it offers few added benefits overall.

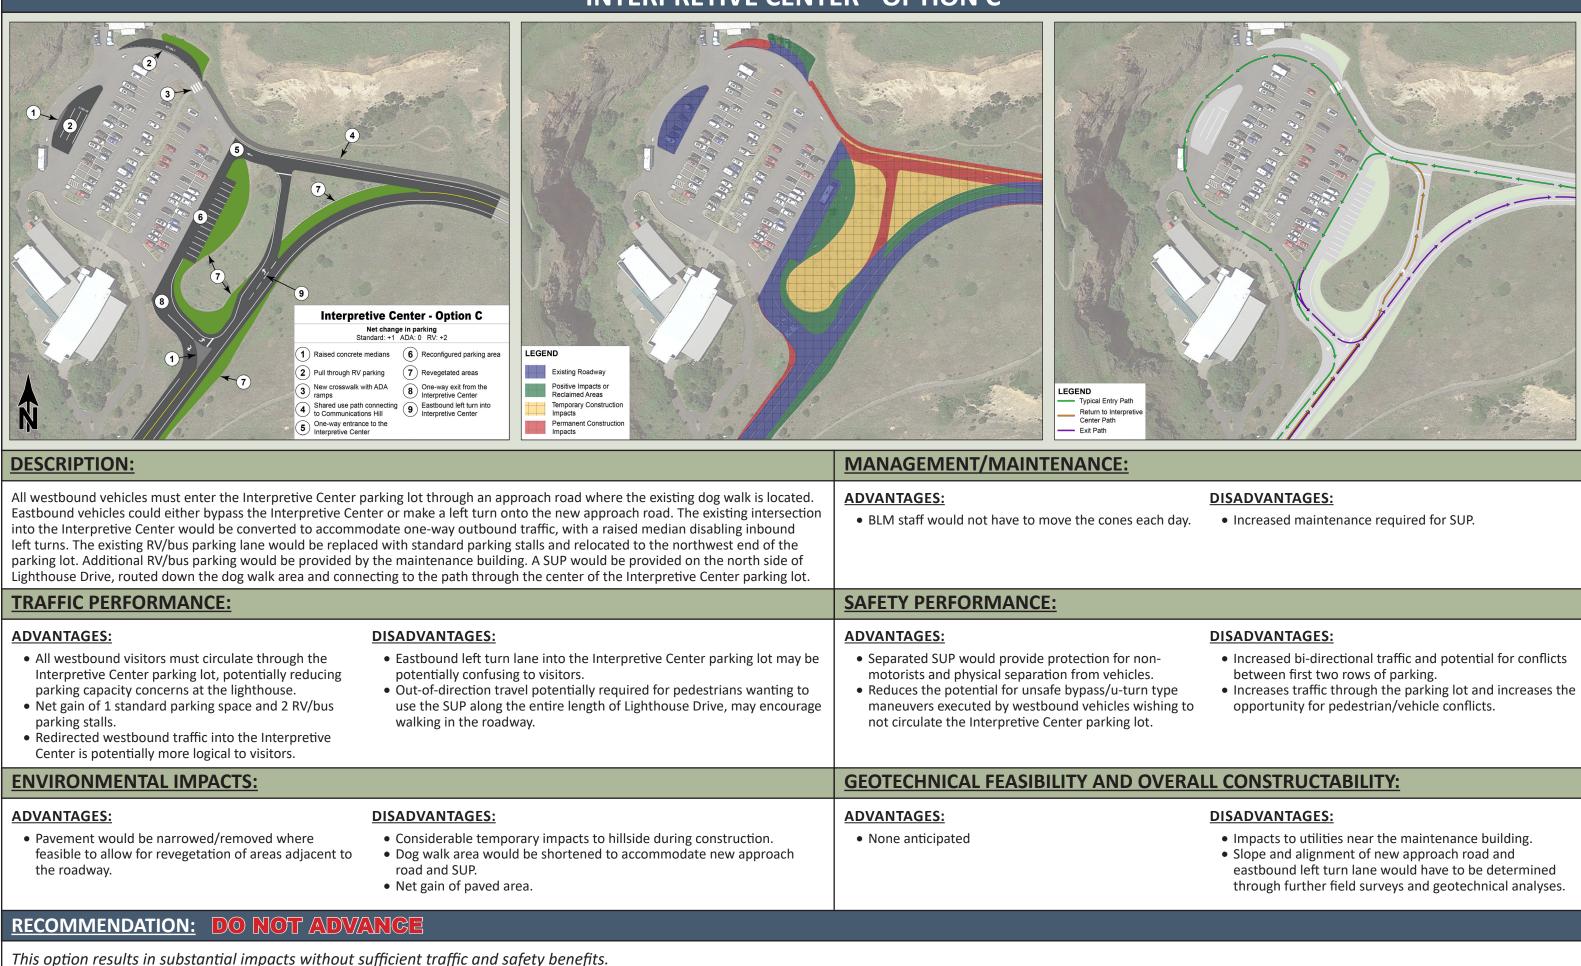

INTERPRETIVE CENTER - OPTION B

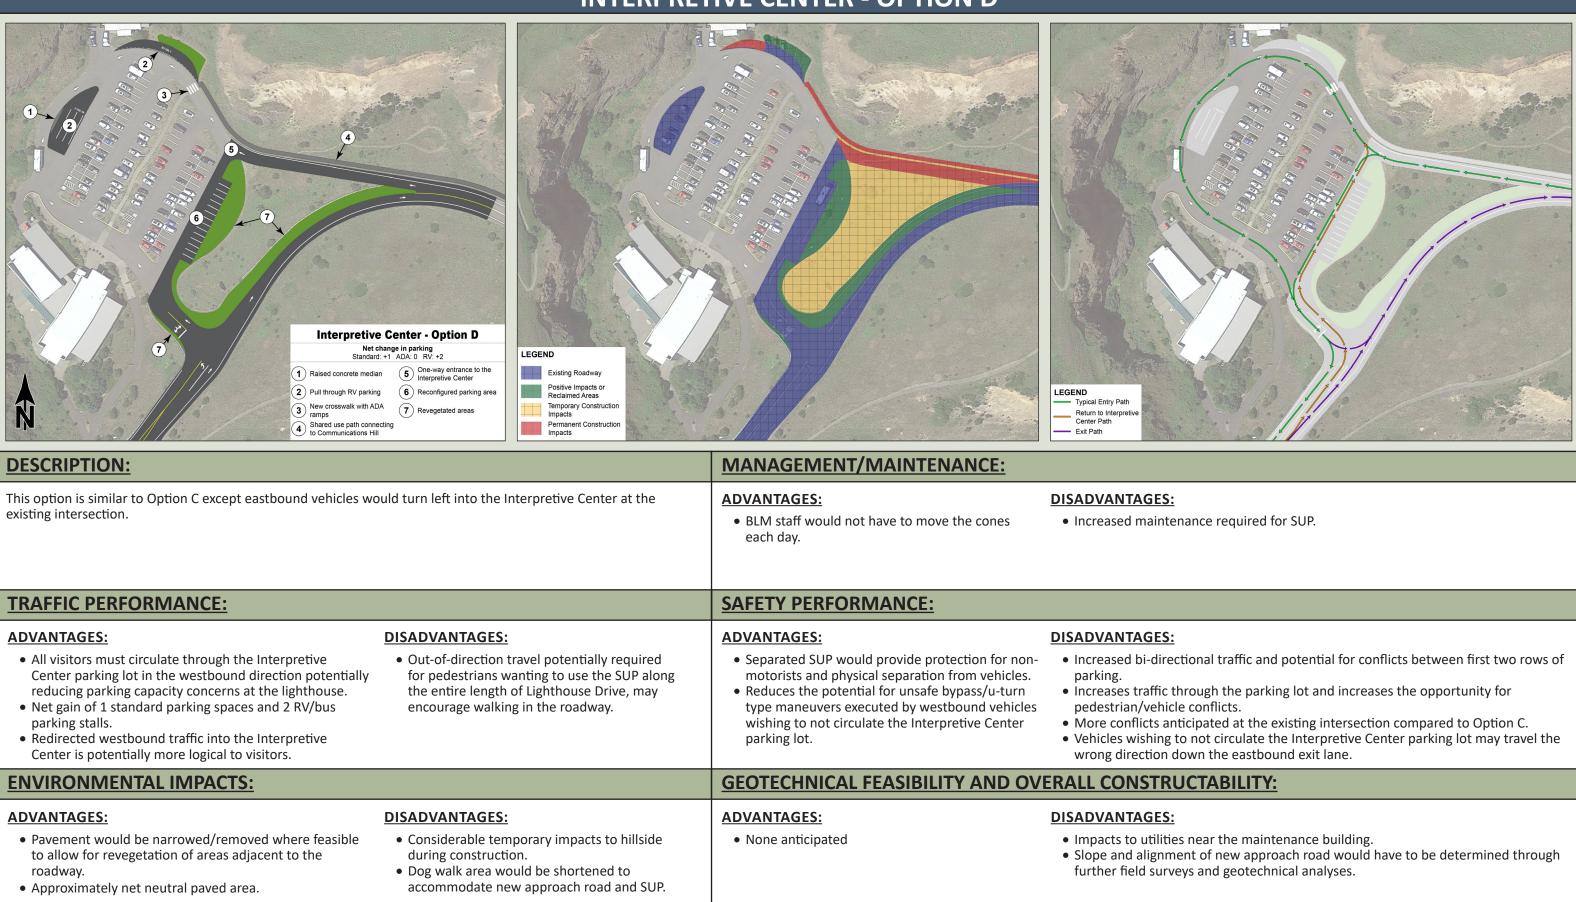

RECOMMENDATION: DO NOT ADVANCE

This option addresses the goal of safely directing westbound traffic into the Interpretive Center parking area, however, it does not improve traffic flow through the parking lot and conflicts from the existing intersection are pushed into the lot.

INTERPRETIVE CENTER - OPTION C

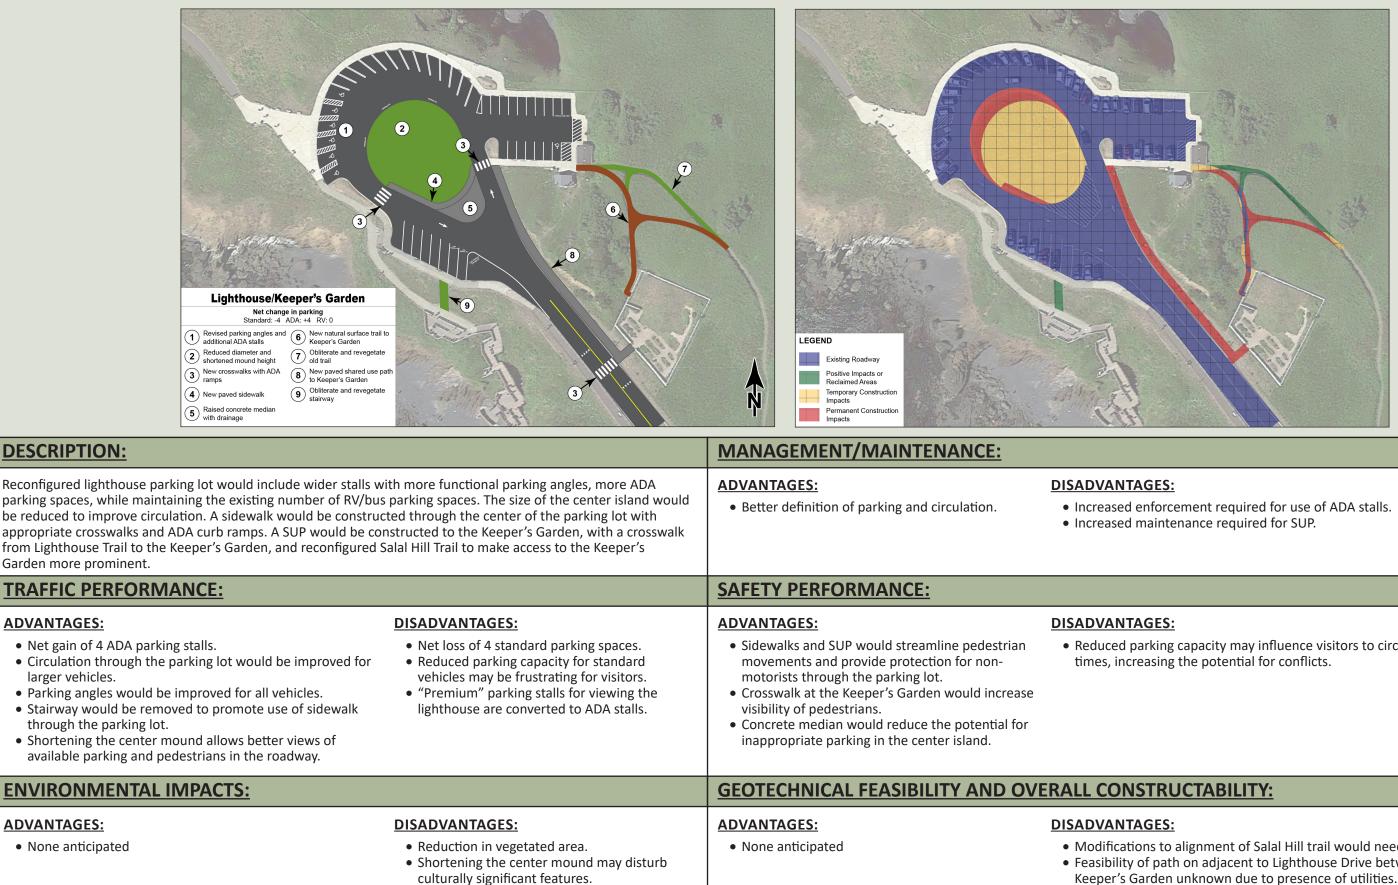

INTERPRETIVE CENTER - OPTION D

<u>RECOMMENDATION:</u> DO NOT ADVANCE

This option results in fewer permanent impacts compared to Option C and operates similarly but does not address all BLM concerns and needs.

LIGHTHOUSE / KEEPER'S GARDEN

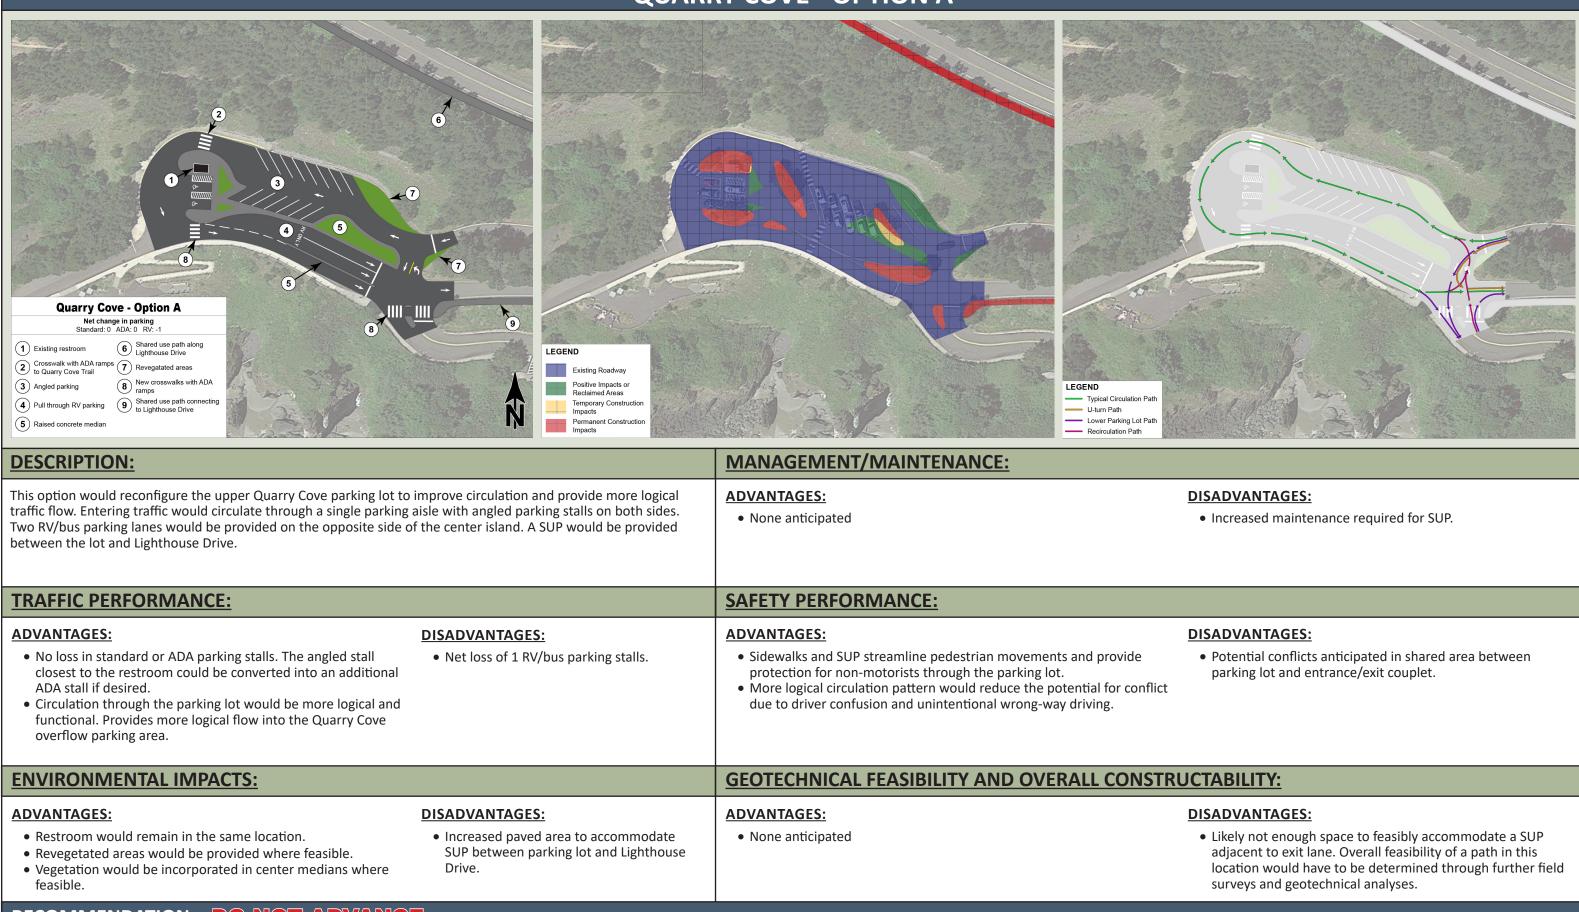

RECOMMENDATION: DO NOT ADVANCE

While this option addresses pedestrian safety, circulation, and ADA parking accommodations, adjustments are needed to minimize impacts and optimize the parking configuration.

• Reduced parking capacity may influence visitors to circulate the lot multiple

• Modifications to alignment of Salal Hill trail would need to be investigated further. • Feasibility of path on adjacent to Lighthouse Drive between restrooms and

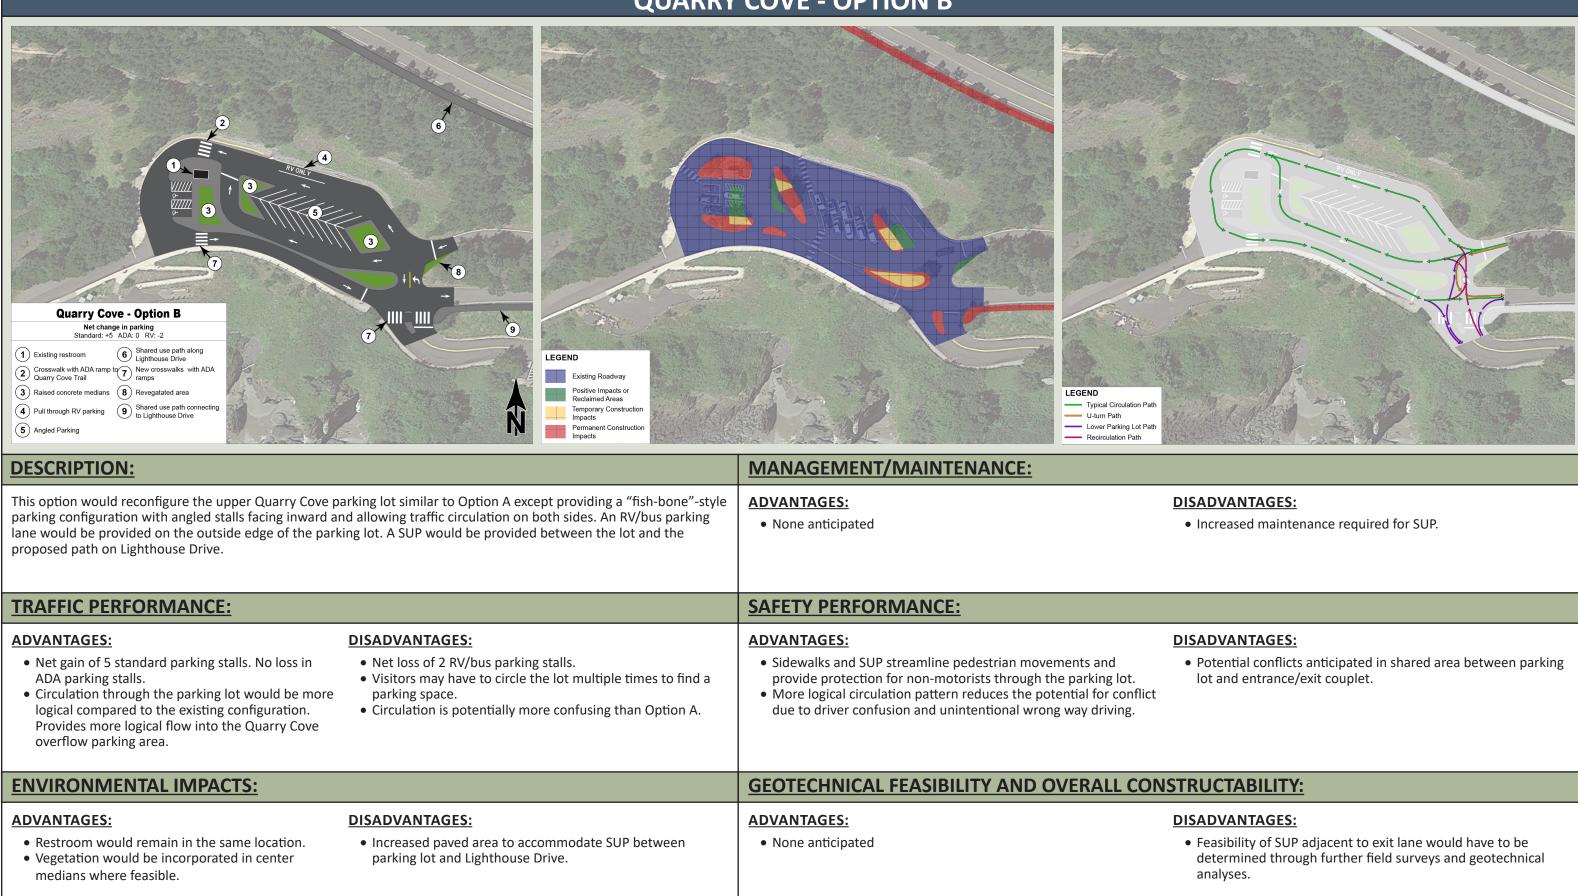

QUARRY COVE - OPTION A

<u>RECOMMENDATION:</u> DO NOT ADVANCE

Although this option addresses pedestrian safety, circulation, and parking accommodations, it is desirable to force entering vehicles to circulate through the parking area to minimize conflicts at the intersection between the entrance/exit couplet and the upper/lower parking areas. The SUP on the exit road is unlikely to be feasible.

QUARRY COVE - OPTION B

<u>RECOMMENDATION:</u> DO NOT ADVANCE

Although this option provides a greater number of parking spaces compared to Option A, the circulation pattern is more confusing and less efficient.

Appendix D: Cost Estimates

APPENDIX A

Planning-Level Cost Estimates

Planning-level cost estimates were developed for preferred improvement concepts. The cost estimates include construction, engineering, and a general contingency to account for unknown factors and anticipated project development risk level. Estimates do not include costs for right-of-way as costs vary considerably with location and additional design details may be needed to determine the amount of right-of-way needed. Cost ranges are provided, indicating a range of variables. The estimates are presented in 2022 dollars and can be expected to increase with inflation depending on the anticipated future year of expenditure.

Hi Annie... thanks for the note and interest. I'll bring this up with the Commission at their meeting on Monday. While I can't speak for them, I suspect that they would be happy to have you participate on the Advisory Committee.

I'll reach out after the meeting.

Derrick I. Tokos, AICP

Community Development Director City of Newport 169 SW Coast Highway Newport, OR 97365 ph: 541.574.0626 fax: 541.574.0644 <u>d.tokos@newportoregon.gov</u>

Hi Derrick, CC: Spencer

I have just reviewed the interviewing process (on video) of the City Council and have heard their decision. I would be honored to work on the Planning Commission Advisory Board.

Thank you for this opportunity, Gail (Annie) McGreenery

--

Annie
